

Inductors for decoupling circuits **Multilayer ferrite MLZ** series (for automotive)

# MLZ2012 type

# **FEATURES**

- The MLZ series include inductors for decoupling circuits that have top-class DC superimposition characteristics and low DC resistance.
- They are compatible with wide frequency band noise, from low to high frequency.
- OH type products have a rated current that is equivalent to that of wound coils.
- OW type products are the new standard type products that have both large current and low resistance.
- OL type products have a resistance up to 60% lower than W type products.
- Operating temperature range: -55 to +125°C

#### APPLICATION

O Automotive equipment, smart phones, tablet terminals, note PCs, various modules such as camera modules, DSCs, video games, portable memory audio devices, navigation systems, PNDs, WLANs, SSDs

<sup>\*</sup>The storage temperature range is for after the assembly.

# REMINDERS FOR USING THESE PRODUCTS

Before using these products, be sure to request the delivery specifications.

# SAFETY REMINDERS

Please pay sufficient attention to the warnings for safe designing when using this products.

| ⚠ REMINDERS   |
|---|
| The storage period is within 12 months. Be sure to follow the storage conditions (temperature: 5 to 40°C, humidity: 10 to 75% RH o less).  If the storage period elapses, the soldering of the terminal electrodes may deteriorate.   |
| ○ Do not use or store in locations where there are conditions such as gas corrosion (salt, acid, alkali, etc.).   |
| <ul> <li>Before soldering, be sure to preheat components.</li> <li>The preheating temperature should be set so that the temperature difference between the solder temperature and chip temperature does not exceed 150°C.</li> </ul>  |
| <ul> <li>Soldering corrections after mounting should be within the range of the conditions determined in the specifications.</li> <li>If overheated, a short circuit, performance deterioration, or lifespan shortening may occur.</li> </ul>   |
| When embedding a printed circuit board where a chip is mounted to a set, be sure that residual stress is not given to the chip due to<br>the overall distortion of the printed circuit board and partial distortion such as at screw tightening portions.   |
| <ul> <li>Self heating (temperature increase) occurs when the power is turned ON, so the tolerance should be sufficient for the set thermadesign.</li> </ul>   |
| <ul> <li>Carefully lay out the coil for the circuit board design of the non-magnetic shield type.</li> <li>A malfunction may occur due to magnetic interference.</li> </ul>   |
| Use a wrist band to discharge static electricity in your body through the grounding wire.   |
| On not expose the products to magnets or magnetic fields.   |
| On not use for a purpose outside of the contents regulated in the delivery specifications.  |
| The products listed on this catalog are intended for use in general electronic equipment (AV equipment, telecommunications equipment, home appliances, amusement equipment, computer equipment, personal equipment, office equipment, measurement equipment, industrial robots) under a normal operation and use condition.  The products are not designed or warranted to meet the requirements of the applications listed below, whose performance and/or qual ity require a more stringent level of safety or reliability or whose failure, malfunction or trouble could cause serious damage to society |

- (1) Aerospace/aviation equipment
- (2) Transportation equipment (electric trains, ships, etc.)

set forth in the each catalog, please contact us.

(3) Medical equipment

person or property.

- (4) Power-generation control equipment
