Features

### **General Description**

The HMC944LC4 is a broadband reflective GaAs MESFET SP4T switch in a compact 4x4 mm ceramic package. Covering 23 to 30 GHz, this switch offers high isolation and low insertion loss. The HMC944LC4 is controlled with 0/ -3V logic, exhibits fast switching speed and consumes much less DC current than pin diode based solutions. With its compact form factor, the HMC944LC4 is ideal for microwave radio as well as SATCOM and sensor applications. The HMC944LC4 is housed in a leadless 4x4 mm SMT package which is compatible with surface mount manufacturing techniques.

Circuit Board Material: Rogers 4350 or Arlon FR4

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation board should be mounted to an appropriate heat sink. The evaluation circuit board shown is available from Hittite upon request.
