Product Details

The EV1HMC8327LG is a fully populated 4-layer evaluation board that allows evaluation of the 81 GHz to 86 GHz HMC8327LG E-band low noise downconverter system-in-package (SiP).

The board assembly includes 4 edge mounted SMA connectors for the differential I and Q mixer outputs as well as a single edge mounted SMA connector for the LO drive input signal. The evaluation board is mounted on an aluminum backplate which includes a standard WR-12 waveguide hole pattern for the E-band signal input.

DC bias is provided to the board using two 10 pin headers (2mm pitch).

Please refer to the data sheet for detailed biasing requirements and application circuit... [Show More..](#)
