INDUCTORS

公ΤDK

Inductors for power circuits Wound metal **SPM-LR** series

SPM5010-LR type

FEATURES

O Magnetic shield type wound inductor for power circuits using a metallic magnetic material.

Low-profile product.

O Compared to ferrite wound type inductors, it is possible to achieve large current, low Rdc, and compactness.

O Low inductance variance in high-temperature environments with good DC superimposition characteristics.

O Metallic magnetic material is used, and the structure has an integrated molded coil, so hum noise is lower than with core adhesive coils.

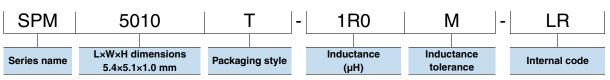

○ Operating temperature range: -40 to +125 °C (including self-temperature rise)

APPLICATION

O Tablet terminals, note PCs, HDDs, servers, VRMs, compact power supply modules, other

O Application guides: Smart phones/tablets

* Rated current: smaller value of either lsat or Itemp.

Isat: When based on the inductance change rate (30% below the initial value)

Itemp: When based on the temperature increase (temperature increase of 40°C by self heating)

REMINDERS FOR USING THESE PRODUCTS

Before using these products, be sure to request the delivery specifications.

SAFETY REMINDERS

Please pay sufficient attention to the warnings for safe designing when using this products.

 The storage period is within 12 months. Be sure to follow the storage conditions (temperature: 5 to 40°C, humidity: 10 to 75% RH c less). If the storage period elapses, the soldering of the terminal electrodes may deteriorate. 				
Do not use or store in locations where there are conditions such as gas corrosion (salt, acid, alkali, etc.).				
 Before soldering, be sure to preheat components. The preheating temperature should be set so that the temperature does not exceed 150°C. 	e difference between the solder temperature and chip temperature			
Soldering corrections after mounting should be within the range of the conditions determined in the specifications. If overheated, a short circuit, performance deterioration, or lifespan shortening may occur.				
When embedding a printed circuit board where a chip is mounted to a set, be sure that residual stress is not given to the chip due to the overall distortion of the printed circuit board and partial distortion such as at screw tightening portions.				
Self heating (temperature increase) occurs when the power is turned ON, so the tolerance should be sufficient for the set therma design.				
 Carefully lay out the coil for the circuit board design of the non-may A malfunction may occur due to magnetic interference. 	gnetic shield type.
