INDUCTORS

Inductors for power circuits Thin-film metal magnetic material TFM-ALMA series (for automotive)

AEC-Q200

TFM322512ALMA type

FEATURES

- O By using metal magnetic material with high Saturation magnetic flux density the excellent DC bias characteristics needed for inductors for power circuits can be achieved.
- With the same product shape and terminal structure as general chip parts it has excellent mounting stability characteristics and can also be mounted to general-purpose land patterns.
- O By using a closed magnetic circuit structure leakage flux is minimized.
- O Compliant with AEC-Q200

APPLICATION

ADAS ECU, in-Vehicle camera (view camera, sensing camera), radar, meter cluster, automotive communication module Other power supply circuit uses

* Rated current: smaller value of either lsat or Itemp.

Isat: When based on the inductance change rate (30% below the initial L value)

Itemp: When based on the temperature increase (temperature increase of 40°C by self heating)

Please contact us for the rated current vs. temperature characteristics (derating) at a product temperature of 85°C or higher.

REMINDERS FOR USING THESE PRODUCTS

Before using these products, be sure to request the delivery specifications.

SAFETY REMINDERS

Please pay sufficient attention to the warnings for safe designing when using this products.

The storage period is within 6 months. Be sure to follow the storage conditions (temperature: 5 to 40°C, humidity: 20 to 75% RH o less).					
If the storage period elapses, the soldering of the terminal electrodes may deteriorate.					
Do not use or store in locations where there are conditions such as gas corrosion (salt, acid, alkali, etc.).					
Before soldering, be sure to preheat components. The preheating temperature should be set so that the temperature difference between the solder temperature and chip temperatur does not exceed 150°C.					
 Soldering corrections after mounting should be within the range If overheated, a short circuit, performance deterioration, or lifes 	-				
When embedding a printed circuit board where a chip is mounted to a set, be sure that residual stress is not given to the chip due to the overall distortion of the printed circuit board and partial distortion such as at screw tightening portions.					
Self heating (temperature increase) occurs when the power is turned ON, so the tolerance should be sufficient for the set therma design.					
Carefully lay out the coil for the circuit board design of the non-magnetic shield type. A malfunction may occur due to magnetic interference.					
OUse a wrist band to discharge static electricity in your body thro	bugh the grounding wire.				
\bigcirc Do not expose the products to magnets or magnetic fields.					
O Do not use for a purpose outside of the contents regulated in the	ne delivery specifications.				
telecommunications equipment, home appliances, amusemer ment, measurement equipment, industrial robots) and to be use is mounted in a vehicle) or standard applications as general el as general electronic equipment in automotive applications in a while the said automotive or general electronic equipment inclu usage methods, respectively.
