Conforming to EMC Directive

cULus Recognition

Certified (Some models only)

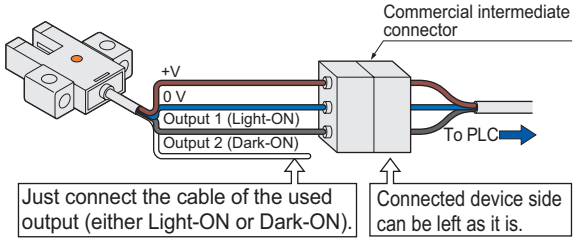
PNP output type available

Enables space saving and quick installation!

Equipped with two independent outputs

All models are equipped with two independent outputs Light-ON and Dark-ON.
Hence, one model suffices even if the output is to be used differently, depending upon the location of use.
Also, since two independent outputs have been provided, cumbersome handling of the output conversion control input, or fear of logic inversion due to a cable break, is eliminated. The sensor can be connected to the existing wiring as it is.

Example of connection with a commercial intermediate connector



Note: Ensure to insulate the unused output wire.

Wide model variety

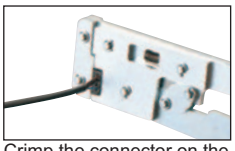
A wide variety of 12 shapes and 24 models is available. You may select from this wide range to suit the mounting conditions.

Meets global requirements

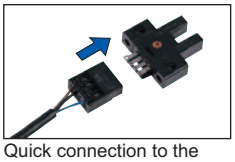
Conforms to Europe's EMC Directive and obtains UL Recognition.
The NPN output type with cable (excluding 3 m 9.843 ft cable length type) has also obtained Korea's S-mark certification.
Both, NPN and PNP output models are available.

Quick fitting hook-up connector

Easy to maintain connector type models are available. Its exclusive connector is the hook-up connector.
Since only crimping with exclusive pliers is to be done, cumbersome soldering or insulation is absolutely not required.
Further, connector attached cable is also available.



Crimp the connector on the cable.



Quick connection to the sensor.

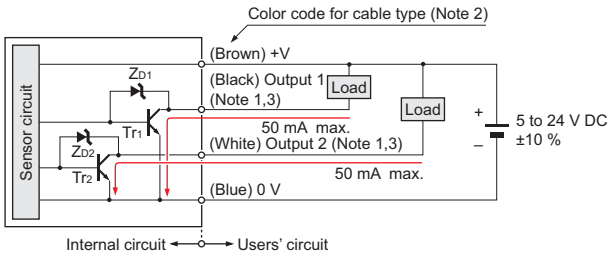
I/O circuit diagram



Notes: 1) Make sure to connect terminals correctly as the sensor does not incorporate a reverse polarity protection circuit.
Further, the output is not incorporated with a short-circuit protection circuit. Do not connect it directly to a power supply or a capacitive load. Faulty wiring may result in damage.
2) The color code of the connector attached cable is also the same.
3) Ensure to insulate the unused output wire.

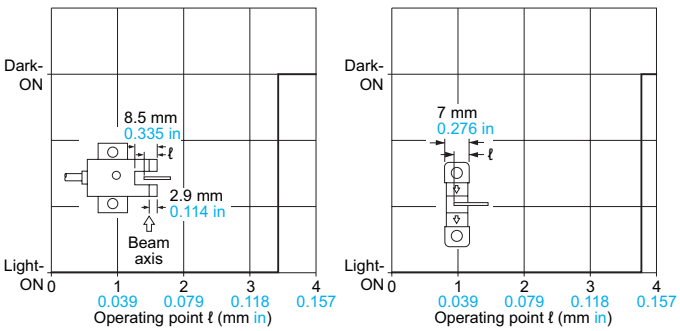
Sensing position



PRECAUTIONS FOR PROPER USE

Refer to p.1458~ for general precautions.

All models

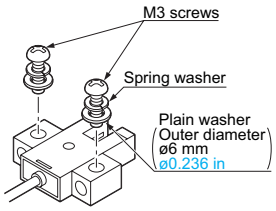
- Never use this product as a sensing device for personnel protection.
- In case of using sensing devices for personnel protection, use products which meet laws and standards, such as OSHA, ANSI or IEC etc., for personnel protection applicable in each region or country.

Make sure to connect terminals correctly as the sensor does not incorporate a reverse polarity protection circuit.
Further, the output is not incorporated with a short-circuit protection circuit. Do not connect it directly to a power supply or a capacitive load. Faulty wiring may result in damage.

Mounting

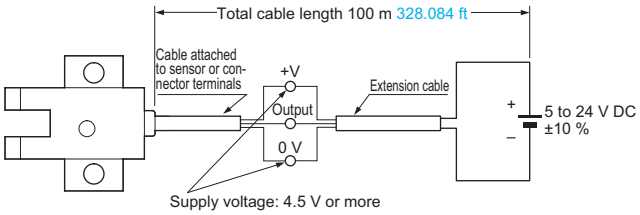
- When fixing the sensor with screws, use M3 screws and the tightening torque should not exceed the values given below.
  Further, use small, round type plain washers (ø6 mm ø0.236 in).

Model No.	Tightening torque
PM-□44(P)	0.5 N·m
PM-□54(P)	



Cable extension

- Cable extension is possible up to an overall length of 100 m 328.084 ft with a 0.3 mm², or more, cable. However, since a voltage drop shall occur due to the cable extension, ensure that the power supply voltage at the end of the cable attached to the sensor or at the sensor terminals is within the rating.

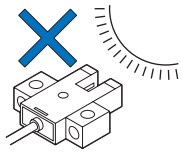


But, when the overall cable length, including the cable attached to the sensor, is as given below, there is no need to confirm the voltage.

Conductor cross-section area of extension cable	Total cable length
0.08 to 0.1 mm²	Up to 5 m 16.404 ft
0.2 mm²	Up to 10 m 32.808 ft
0.3 mm²	Up to 20 m 65.617 ft

Others

- Since the sensor is intended for use inside machines, no special countermeasures have been taken against extraneous light. Take care that extraneous light is not directly incident on the beam receiving section.
- Do not use during the initial transient time (50 ms) after the power supply is switched on.



PRECAUTIONS FOR PROPER USE

Refer to p.1458~ for general precautions.

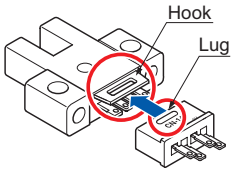
Cautions in plugging or unplugging a connector

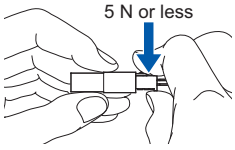
- Do not plug or unplug a connector more than 10 times.
- Be sure not to give stress more than 5 N to a terminal of both a connector and a sensor. If you do not follow the above cautions, it will cause a poor contact.

Procedures of plugging or unplugging a connector

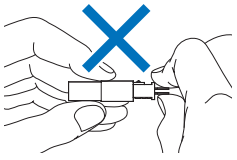
①Insert a connector straight into a sensor until the connector lug is locked by the sensor hook.



②When unplugging, give as much stress as a connector lug can be relieved from a hook. Then unplug it.



Caution: Be sure to hold a connector when plugging or unplugging it. Do not hold a terminal or a cable when plugging or unplugging the connector. Otherwise, it will cause a poor contact.



Soldering (Both connector CN-14 and sensor)

- If soldering is done directly on the terminals, strictly adhere to the conditions given below.

Soldering temperature	260 °C 500 °F or less
Soldering time	3 sec. or less
Soldering position	Refer to the below figure

Sensor **Connector**

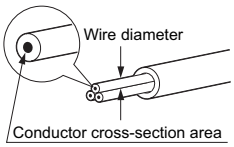
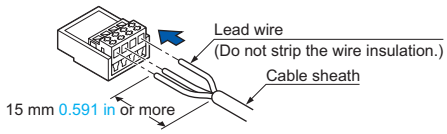
Item \ Model No.	CN-14H	CN-14H-2
Conductor cross-section area	0.08 to 0.2 mm² (AWG28 to AWG24)	0.18 to 0.22 mm² (AWG25 to AWG24)
Wire diameter	ø0.7 to ø1.2 mm ø0.028 to ø0.047 in	ø1.2 to ø1.52 mm ø0.047 to ø0.060 in
Wire insulation material	Vinyl chloride or soft polyethylene	

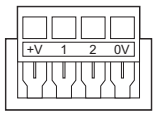


Crimping method

①Strip the cable sheath 15 mm 0.591 in, or more, and insert the wires into the connector insertion holes till the wire tips reach the end.



Arrangement of connector terminals

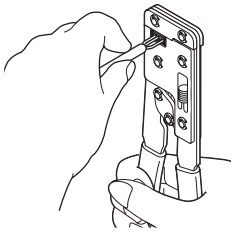


+V: +V
1: Output 1 (Light-ON)
2: Output 2 (Dark-ON)
0V: 0 V
(Note) Power supply

Note: Wire at Pin No.1 or 2 as per requirement.

②Crimp with the exclusive hook-up pliers **CN-HP**.

Notes: 1) When attaching or detaching the connector fitted with a cable, make sure to hold the connector firmly before proceeding.
2) After crimping, do not pull on the cable.



Caution: Make sure to use the exclusive hook-up pliers **CN-HP**. Commercially available pliers cannot be used.

- Prior to using the sensor, affix the cable in a way as to avoid direct stress on the crimped part.
