Please note that Cypress is an Infineon Technologies Company.

The document following this cover page is marked as “Cypress” document as this is the company that originally developed the product. Please note that Infineon will continue to offer the product to new and existing customers as part of the Infineon product portfolio.

Continuity of document content

The fact that Infineon offers the following product as part of the Infineon product portfolio does not lead to any changes to this document. Future revisions will occur when appropriate, and any changes will be set out on the document history page.

Continuity of ordering part numbers

Infineon continues to support existing part numbers. Please continue to use the ordering part numbers listed in the datasheet for ordering.

S70GL02GT

2-Gbit (256-MB) 3.0 V Flash Memory

General Description

The Cypress S70GL02GT 2-Gigabit MirrorBit® Flash memory device is fabricated on 45-nm MirrorBit® Eclipse™ process technology. This device offers a fast page access time of 25 ns with a corresponding random access time of 110 ns. It features a Write Buffer that allows a maximum of 256 words/512 bytes to be programmed in one operation, resulting in faster effective programming time than standard single byte/word programming algorithms. This makes the device an ideal product for today's embedded applications that require higher density, better performance and lower power consumption.

This document contains information for the S70GL02GT device, which is a dual-die stack of two S29GL01GT dies.

For detailed specifications, refer to the discrete die datasheet provided in the below table.

Document	Cypress Document Number
S29GL01GT, S29GL512T Datasheet	002-00247

Distinctive Characteristics

- CMOS 3.0-V Core with Versatile I/O™
- Two 1024 Megabit (S29GL01GT) in a single 64-ball fortified-BGA package (see the S29GL01GT datasheet for full specifications)
- 45 nm MirrorBit Eclipse process technology
- Single supply (V_{CC}) for read/program/erase (2.7 V to 3.6 V)
- Versatile I/O feature
  - Wide I/O voltage (V_{IO}): 1.65 V to V_{CC}
- ×8 and ×16 data bus
- 16-word/32-byte page read buffer
- 512-byte programming buffer
  - Programming in page multiples, up to a maximum of 512 bytes
- Sector erase
  - Uniform 128-KB sectors
  - S70GL02GT: 2048 sectors
- Suspend and Resume commands for Program and Erase operations
- Status Register, Data Polling, and Ready/Busy pin methods to determine device status
- Advanced Sector Protection (ASP)
  - Volatile and nonvolatile protection methods for each sector
- Separate 1024-bye One Time Program (OTP) array with two lockable regions
  - Each device supports Common Flash Interface (CFI)
- WP# input
  - Protects the last sector of the device, regardless of sector protection settings
- Temperature range/grade
  - Industrial (–40 °C to +85 °C)
  - Industrial Plus (–40 °C to +105 °C)
  - Automotive, AEC-Q100 Grade 3 (–40 °C to +85 °C)
  - Automotive, AEC-Q100 Grade 2 (–40 °C to +105 °C)
- 100,000 Program-Erase cycles
- 20-year data retention
- Packaging options
  - 64-ball LSH fortified BGA, 13 mm × 11 mm

Notes

1. BGA package marking omits leading “S70” and packing type designator from ordering part number.
2. Packing Type “0” is standard option.

Valid Combinations — Automotive Grade / AEC-Q100

Table 2 lists configurations that are Automotive Grade/AEC-Q100 qualified and are planned to be available in volume. This table will be updated when new combinations are released. Consult your local sales representative to confirm availability of specific combinations and to check on newly released combinations.

Production Part Approval Process (PPAP) support is only provided for AEC-Q100 grade products.

Products to be used in end-use applications that require ISO/TS-16949 compliance must be AEC-Q100 grade products in combination with PPAP. Non–AEC-Q100 grade products are not manufactured or documented in full compliance with ISO/TS-16949 requirements. AEC-Q100 grade products are also offered without PPAP support for end-use applications that do not require ISO/TS-16949 compliance.

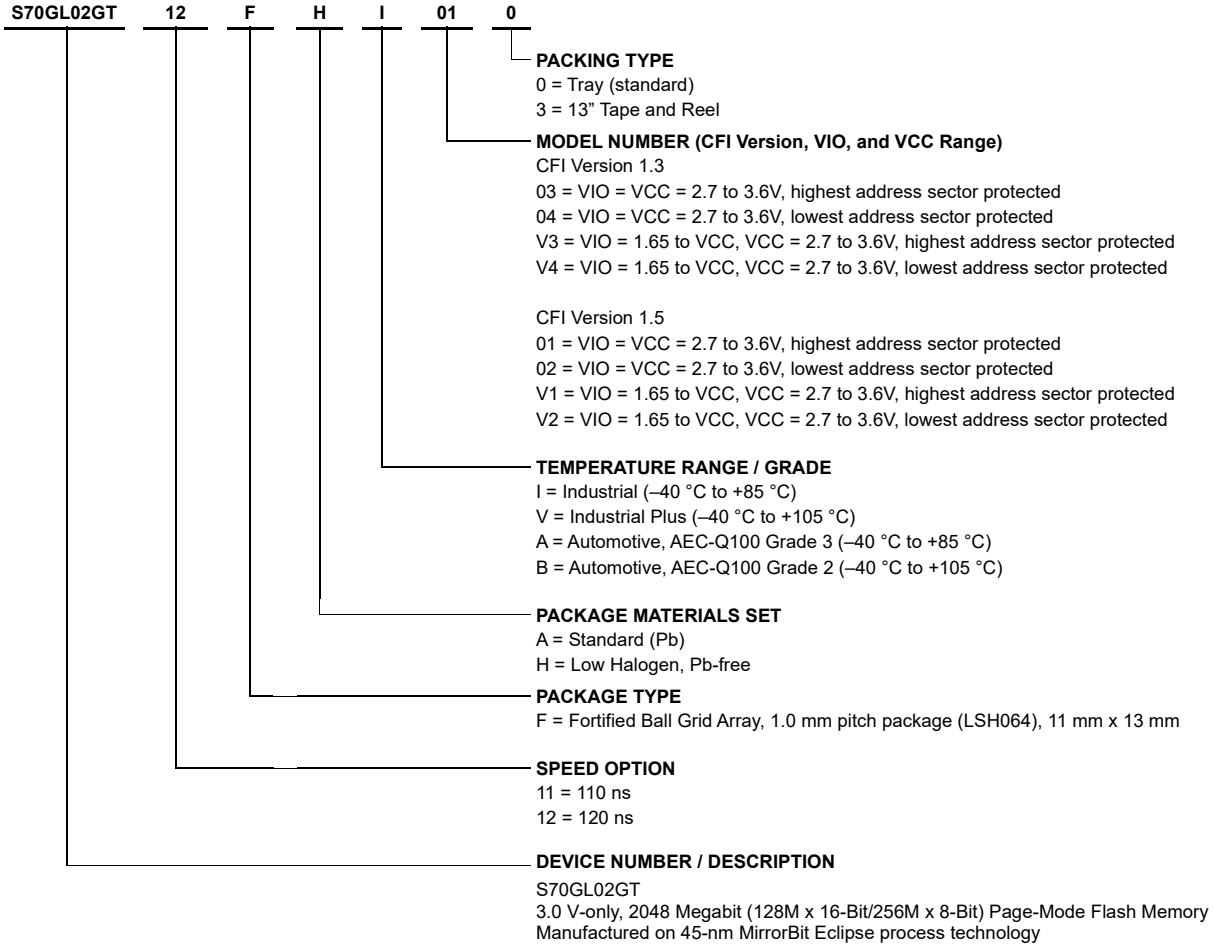
3. BGA package marking omits leading “S70” and packing type designator from ordering part number.
4. Packing Type “0” is standard option.

The ordering part number is formed by a valid combination of the following:



2. Input/Output Descriptions and Logic Symbol

Table 3 identifies the input and output package connections provided on the device.

Table 3. Input/Output Descriptions

Symbol	Type	Description
DQ14–DQ0	I/O	Data inputs and outputs.
DQ15/A-1	Input/Output	DQ15: Data inputs and outputs. A-1: LSB address input in byte mode.
CE#	Input	Chip Enable. At V_{IL}, selects the device for data transfer with the host memory controller.
OE#	Input	Output Enable. At V_{IL}, causes outputs to be actively driven. At V_{IH}, causes outputs to be high impedance (High-Z).
WE#	Input	Write Enable. At V_{IL}, indicates data transfer from the host to device. At V_{IH}, indicates data transfer is from the device to host.
A26-A0	Input	Address lines for S29GL02GT.
V_{CC}	Supply	Core power supply.
V_{IO}	Supply	Versatile I/O power supply.
V_{SS}	Supply	Power supplies ground.
RY/BY#	Output — open drain	Ready/Busy. Indicates whether an Embedded Algorithm is in progress or complete. At V_{IL}, the device is actively engaged in an embedded algorithm such as erasing or programming. At High-Z, the device is ready for read or a new command write — requires an external pull-up resistor to detect the High-Z state. Multiple devices may have their RY/BY# outputs tied together to detect when all devices are ready.
BYTE#	Input	Selects data bus width. At V_{IL}, the device is in byte configuration and data I/O pins DQ7-DQ0 are active and DQ15/A-1 becomes the LSB address input. At V_{IH}, the device is in word configuration and data I/O pins DQ15-DQ0 are active.
RESET#	Input	Hardware Reset. At V_{IL}, causes the device to reset control logic to its standby state, ready for reading array data.
WP#	Input	Write Protect. At V_{IL}, disables program and erase functions in the highest address 64-kword (128-KB) sector of the device. At V_{IH}, the sector is not protected. WP# has an internal pull-up; When unconnected WP# is at V_{IH}.
NC	No Connect	Not Connected internally. The pin/ball location may be used in the printed circuit board (PCB) as part of a routing channel.
DNU	Reserved	Do Not Use. Reserved for use by Cypress. The pin/ball is connected internally. The input has an internal pull-down resistance to V_{SS}. The pin/ball can be left open or tied to V_{SS} on the PCB.
RFU	No Connect	Reserved for Future Use. Not currently connected internally but the pin/ball location should be left unconnected and unused by the PCB routing channel for future compatibility. The pin/ball may be used by a signal in the future.

3.1 Special Handling Instructions for BGA Package

Special handling is required for flash memory products in BGA packages.

Flash memory devices in BGA packages may be damaged if exposed to ultrasonic cleaning methods. The package and/or data integrity may be compromised if the package body is exposed to temperatures above 150 °C for prolonged periods of time.

Notes

5. Ball E1, Do Not Use (DNU), a device internal signal is connected to the package connector. The connector may be used by Cypress for test or other purposes and is not intended for connection to any host system signal. Do not use these connections for PCB Signal routing channels. Though not recommended, the ball can be connected to V_{CC} or V_{SS} through a series resistor.
6. Balls C1, D1, E1, G1: Reserved for Future Use (RFU).
7. Balls A1, A8, H1, H8: No Connect (NC).

2. SOLDER BALL POSITION DESIGNATION PER JEP95, SECTION 3, SPP-020.
3. "e" REPRESENTS THE SOLDER BALL GRID PITCH.
4. SYMBOL "MD" IS THE BALL MATRIX SIZE IN THE "D" DIRECTION.
   SYMBOL "ME" IS THE BALL MATRIX SIZE IN THE "E" DIRECTION.
   N IS THE NUMBER OF POPULATED SOLDER BALL POSITIONS FOR MATRIX SIZE MD X ME.
5. DIMENSION "b" IS MEASURED AT THE MAXIMUM BALL DIAMETER IN A PLANE PARALLEL TO DATUM C.
6. "SD" AND "SE" ARE MEASURED WITH RESPECT TO DATUMS A AND B AND DEFINE THE POSITION OF THE CENTER SOLDER BALL IN THE OUTER ROW.
   WHEN THERE IS AN ODD NUMBER OF SOLDER BALLS IN THE OUTER ROW, "SD" OR "SE" = 0.
   WHEN THERE IS AN EVEN NUMBER OF SOLDER BALLS IN THE OUTER ROW, "SD" = eD/2 AND "SE" = eE/2.

4. Memory Map

The S70GL02GT consist of uniform 64 kword (128-KB) sectors organized as shown in Table 4.

Table 4. S70GL02GT Sector and Memory Address Map

Uniform Sector Size	Sector Count	Sector Range	Address Range (16-bit)	Notes
64 kword/128 KB	2048	SA00	0000000h–000FFFFh	Sector Starting Address
		:	:	
		SA2047	7FF0000H–7FFFFFFh	Sector Ending Address

Note

8. This table has been condensed to show sector-related information for an entire device on a single page. Sectors and their address ranges that are not explicitly listed (such as SA001-SA2046) have sector starting and ending addresses that form the same pattern as all other sectors of that size. For example, all 128 KB sectors have the pattern xxx0000h-xxxFFFFh.

5. Autoselect

Table 5 provides the device identification codes for S70GL02GT. For more information on the autoselect function, refer to the S29GL-S datasheet (Cypress publication number 002-00247).

Notes

9. I_{CC} active while Embedded Algorithm is in progress.
10. Not 100% tested.
11. Automatic sleep mode enables the lower power mode when addresses remain stable for a designated time.
12. V_{IO} = 1.65 V to V_{CC} or 2.7 V to V_{CC} depending on the model.
13. V_{CC} = 3 V and V_{IO} = 3 V or 1.8 V. When V_{IO} is at 1.8 V, I/O pins cannot operate at >1.8 V.
14. During power-up there are spikes of current demand, the system needs to be able to supply this current to insure the part initializes correctly.
15. If an embedded operation is in progress at the start of reset, the current consumption will remain at the embedded operation specification until the embedded operation is stopped by the reset. If no embedded operation is in progress when reset is started, or following the stopping of an embedded operation, I_{CC7} will be drawn during the remainder of t_{RPH}. After the end of t_{RPH} the device will go to standby mode until the next read or write.
16. For all other DC current values, refer to the S29GL01GT/S29GL512T datasheet.

10. Device ID and Common Flash Interface (ID-CFI) ASO Map

The Device ID portion of the ASO (word locations 0h to 0Fh) provides manufacturer ID, device ID, Sector Protection State, and basic feature set information for the device.

ID-CFI Location 02h displays sector protection status for the sector selected by the sector address (SA) used in the ID-CFI enter command. To read the protection status of more than one sector it is necessary to exit the ID ASO and enter the ID ASO using the new SA. The access time to read location 02h is always t_{ACC} and a read of this location requires CE# to go High before the read and return Low to initiate the read (asynchronous read access). Page mode read between location 02h and other ID locations is not supported. Page mode read between ID locations other than 02h is supported.
