#JST: B2P3-VH Series AC Input Connector Variant
[1]See Isolation requirements

FEATURES

- IEC60601 Ed 3 Medical (2 X MOPP Pri-Sec)
- EN60950 ITE safety approved
- Designed to comply with IEC60601-1-2 4th Edition EMC Standard Requirements[1]
- 400W compact high density
- 3" x 5" standard footprint
- High efficiency up to 94%
- Remote sense
- Remote On/Off, Power OK
- Universal AC input with active PFC
- Less than 1U high – 1.4"
- Convection cooled operation up to 250W
- Isolated 12V@1A fan output
- Isolated 5V@2A standby output
- RoHS compliant
- Active inrush protection
- Current sharing
- MVAC400-54 main output is PoE Compatible

[1]When deployed in the End User equipment

DESCRIPTION

The MVAC400 series switching power supplies utilize advanced component and circuit technologies to deliver high efficiency. Designed for medical, computing, communications, telecom and other OEM applications to satisfy 1U height design considerations, the MVAC400 Series measures only 3.0" x 5.0" x 1.40". All models offer universal AC input with active power factor correction (PFC) and compliance to worldwide safety and EMC standards

Available now at: www.murata-ps.com/en/3d/acdc.html

INPUT CHARACTERISTICS

Parameter	Conditions	Min.	Typ.	Max.	Units
Input Voltage Operating Range	Single phase	90	115/230	264	Vac
	DC	127		300	Vdc
Input Frequency		47	50/60	63	Hz
Turn-on Input Voltage	Input rising	80		90	Vac
Turn-off Input Voltage	Input falling	70		80	
Input Current	90Vac input, full load all outputs			5.5	A
No Load Input Power[7]	(PS_ON = OFF, 5V_Aux = 0A)	1.5		2.0	W
Inrush Current	At 264Vac, at 25°C cold start		15		Apk
Power Factor	At 230Vac, full load		0.98		

OUTPUT CHARACTERISTICS

Model Number	Main Output Voltage (V1)	Load Current	Maximum Load Capacitance	Line, Load, Cross Regulation[6]	Typical Efficiency @230Vac
MVAC400-12AFx	12V	0 to 33.3A	0 to 2200µF	± 1%	93%
MVAC400-24AFxx	24V	0 to 16.7A	0 to 470µF	± 1%	93%
MVAC400-48AFx	50V	0 to 8.0A	0 to 150µF	± 1%	94%
MVAC400-54	54V	0-7.4A	0 to 150µF	± 1%	94%

MAIN OUTPUT CHARACTERISTICS (ALL MODELS)

Parameter	Conditions	Typ.	Max.	Units
Transient Response[9]	50% load step, 1A/µsec slew rate		± 5	%
Settling Time to 1% of Nominal			500	µsec
Turn On Delay	After application of input power		3	sec
Output Voltage Rise	Monotonic[5]		50	msec
Output Holdup	120Vac/60Hz, full load	20		
Temperature Coefficient			0.02	%/°C
Ripple Voltage & Noise[1]			1	%
Remote Sense[NB]	Compensates for up to 0.5V of lead drop with remote sense connected. Protected against short circuit and reverse connection.		500	mV
Hot Swap Transients[10]	All outputs remain in regulation		± 10	%

[NB] Not available on MVAC400-54 variant

AUXILIARY OUTPUT CHARACTERISTICS (ALL MODELS)

Auxiliary Output	Aux Output Voltage[8]	Load Current	Load Capacitance	Line, Load, Cross Regulation[3]	Ripple & Noise[1]
Fan (V2)	12V	0 to 1A	0 to 220µF	±10%	2%
Aux (V3)	5V	0 to 2A	0 to 220µF	±5%	1%

ENVIRONMENTAL CHARACTERISTICS					
Parameter	Conditions	Min.	Typ.	Max.	Units
Storage Temperature Range		-40		85	°C
Operating Temperature Range	See power rating curves	-10		70	
	Start up	-20			
Operating Humidity	Non-condensing	10		95	%
Operating Altitude		-200		5000	m
MTBF	Telcordia SR-332 M1C3 @25°C	474K			Hours
Shock	Operating, MIL-HBK-810E	Complies			
	Non-operating, MIL-HBK-810E	Complies			
Operational Vibration	IEC-68-2-27 standard	Complies to levels of IEC721-3-2			
Safety – Medical Standards 2 x MOPP (Primary-Secondary)	IEC60601-1 (Ed. 3) – CB Cert and Report ANSI/AAMI ES60601-1 (2005+C1:09+A2:10) CAN/CSA 22.2 No. 60601-1 (2008) 3rd Edition EN60601-1:2006+CORR:2010

Warranty	2 years				
Outside Dimensions	3.0" x 5.0" x 1.4" (76.2mm x 127mm x 35.6mm)				
Weight (typ.)	0.8lbs (362.87g)				

RESIDUAL RISK (PER ISO 14971 & IEC60601-1) FOR USER CONSIDERATION	
Fault Condition	Residual Risk
Complies	Contact your Murata salesperson for details

PROTECTION CHARACTERISTICS					
Parameter	Conditions	Min.	Typ.	Max.	Units
Over Voltage Protection[4]	V1 (main output) latching	110		125	%
	V3 (aux output) latching	5.5		7.5	V
Over Current Protection4	V1, hiccup mode	110		130	%A max
	V3, auto-recovery	110		150	
Over Temperature Protection	Auto-recovery		Complies		
Remote Sense Short Circuit Protection			Complies		
Remote Sense Reverse Connection Protection			Complies		

ISOLATION CHARACTERISTICS					
Parameter	Conditions	Min.	Typ.	Max.	Units
Isolation	Primary to Chassis	1500			Vac
	Primary to Secondary (2xMOPP)	4000			
	Secondary to Chassis	500			
	Output to Output	500			
Isolation; PoE Variant	It shall be required that the 54VDC Main V1 output is provided with the necessary isolation to chassis ground (frame) and other outputs/signals (not associated with the output) to allow compliance with IEEE 802-3at: a) 1500 VRMS steady-state at 50-60 Hz for 60 seconds, applied as specified in sub clause 6.2 of IEC 60950-1:2001. b) An impulse test consisting of a 1500V, 10/700µs waveform, applied 10 times, with a 60 second interval between pulses, applied as specified in sub clause 6.2 of IEC 60950-1:2001.				
Earth Leakage Current (under single fault condition)	264Vac, 60Hz, 25°C		300		µA
Earth Leakage Current (under normal conditions)	264Vac, 60Hz, 25°C		150		µA

CURRENT SHARING VARIANTS – MVAC400-xxAFD AND MVAC400-xxAFR	
Model Number	Description
MVAC400-12AFD MVAC400-24AFD MVAC400-48AFD MVAC400-12AFR	Main Output: Current share is achieved using the droop method. Nominal output voltage is achieved at 50% load and output voltage increases/drops at a rate of: • 30mv per amp for the 12V output • 120mV per amp for the 24V output • 500mV per amp for the 50V output. Startup of parallel power supplies is not internally synchronized. If more than 400W combined power is needed, start-up synchronization must be provided by using a common PS_ON signal. To account for ±10% full load current sharing accuracy and the reduction in full load output voltage due to droop, the available output power must be derated by 15% when units are operated in parallel. Current sharing can be achieved with or without remote sense connected to the common load. If ORing protection is desired use the AFR model or if the AFD model is selected an external ORing FET is recommended (see Applications Note ACAN-42). Aux (V3) output can be tied together for redundancy but total combined output power must not exceed 10W, external ORing devices must be used. Fan (V2) can be tied together for redundancy but total com load must not exceed 12W, external ORing devices must be used.

EMISSIONS AND IMMUNITY

Characteristic	Standard	Compliance
Input Current Harmonics	IEC/EN 61000-3-2	Class A
Voltage Fluctuation and Flicker	IEC/EN 61000-3-3	Complies
Conducted Emissions	EN 55022	Class B
	FCC Part 15	Class B
ESD Immunity	IEC/EN 61000-4-2	Level 4, Criterion 2
Radiated Field Immunity	IEC/EN 61000-4-3	Level 3, Criterion A
Electrical Fast Transient Immunity	IEC/EN 61000-4-4	Level 4, Criterion A
Surge Immunity	IEC/EN 61000-4-5	Level 3, Criterion A
Radiated Field Conducted Immunity	IEC/EN 61000-4-6	Level 3, 10V/m, Criterion A
Magnetic Field Immunity	IEC/EN 61000-4-8	Level 3, Criterion A
Voltage dips, interruptions	IEC/EN 61000-4-11	Level 3, Criterion B

EMI CONSIDERATIONS

For optimum EMI performance, the power supply should be mounted to a metal plate grounded to all 4 mounting holes of the power supply. To comply with safety standards, this plate must be properly grounded to protective earth (see mechanical dimension notes). Pre-compliance testing has shown the stand-alone power supply to comply with EN55022 class A radiated emissions. Class B radiated emissions are achievable with a metal enclosure. Radiated emission results vary with system enclosure and cable routing paths.

SAFETY CONSIDERATIONS

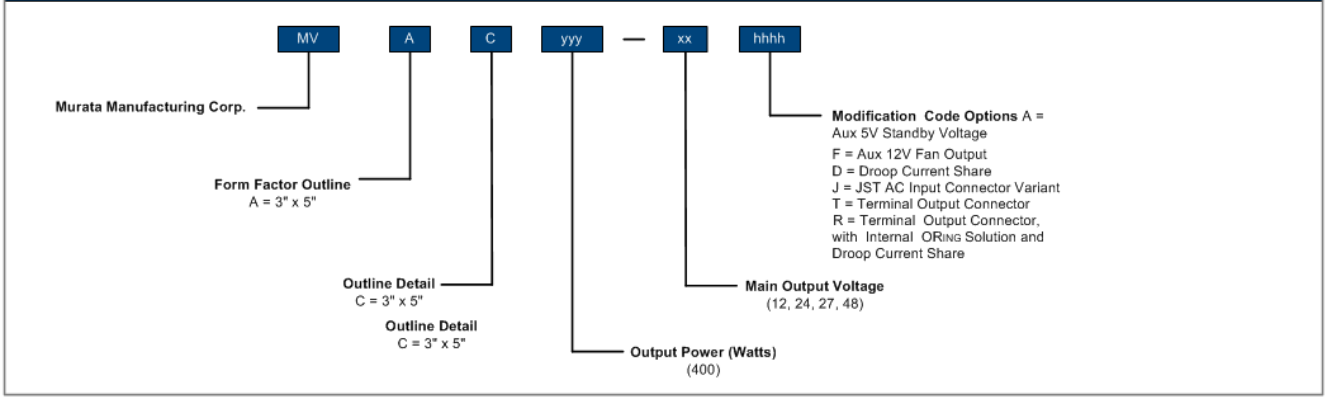
1. This power supply is a component level power supply intended for use in Class I or Class II applications. Secondary ground traces need to be suitably isolated from primary ground traces when used in Class II applications.
2. When the power supply is used in Class II equipment, all ground traces and components connected to the primary side are considered primary for spacing and insulation considerations.

STATUS AND CONTROL SIGNALS

Parameter	Models	Conditions
PS_ON[11]	MVAC400-xxAF MVAC400-xxAFD MVAC400-xxAFR	This pin must be pulled low (sink current >2mA) to +5V_AUX_RTN to turn on the main and Fan (V2) output. The +5V_AUX output is independent of the PS_ON signal, and comes up automatically when the input AC or input DC voltage is applied within their specified operating ranges.
	MVAC400-xxAFT MVAC400-xxAFJT	This pin is pulled high internally and so all three outputs (main, Fan output and +5V_AUX) come up automatically when the input AC or input DC voltage is applied within their specified operating ranges. Pulling this pin low (sink current >2mA) to +5V_AUX_RTN will disable the main and fan outputs.
PWR_OK	All Models	Open collector logic goes high 50-200ms after the main output is within regulation; it goes low at least 6msecs before loss of regulation. Internal 10K pull up to +5V_Aux is provided. Applications using the PWR_OK signal should maintain a minimum load of 5W on the main or fan output.

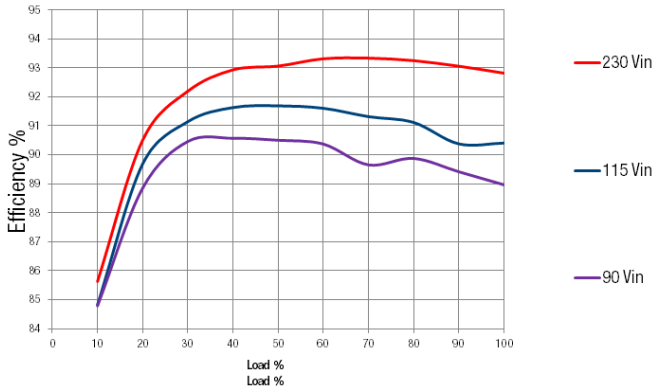
1 Noise and ripple is measured at an oscilloscope jack on the output, 20MHz bandwidth, and with 0.1µF ceramic and 10µF aluminum electrolytic capacitors across the output pins.
2 Unless otherwise specified all measurements are taken at 120Vac input and 25°C ambient temperature.
3 Fan (V2) regulation band applies from 0.1A to 1A load with a minimum of 10W load on the main (V1) output.
4 Fan (V2) has overvoltage protection (tracking V1) and short circuit protection. Overloading the Fan (V2) output can result in permanent damage to the unit.
5 24V, 50V &54V models may exhibit up to 5% turn on overshoot for loads less than 4% of full load.
6 Load regulation for droop version models (MVAC400-xxAFD and MVAC400-xxAFR) is based the calculated droop voltage ±1.5% (see current sharing section for droop characteristics).
7 No load Input power varies by model and by input line. Measurement is difficult to make due to burst mode operation. Please contact Murata sales if additional information is required.
8 All three output returns are isolated from each other (see isolation characteristics section); the returns may be tied together externally.
9 Load steps beginning from combined loads on the main and fan outputs of less than 5W may result in a transient undershoot outside of the specification limits.
10 For MVAC400-xxAFR models only: Measured with 220µF capacitance across main output.
11 The MVAC400-24AFT does support PS_ON functionality; however it uses "reverse" logic compared to the to the other variants. The Main output is permanently enabled (i.e. turns on when the AC source is present an d within operational range). Conversely, the Main output can be disabled (turned off) when the PS_ON is pulled low (to the +5V_AUX_RTN).

PART NUMBER STRUCTURE

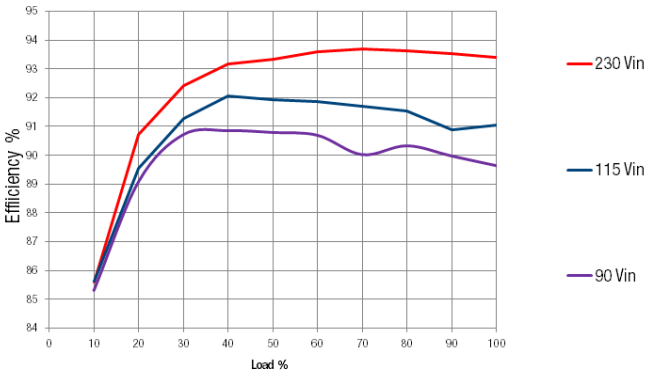


PERFORMANCE DATA

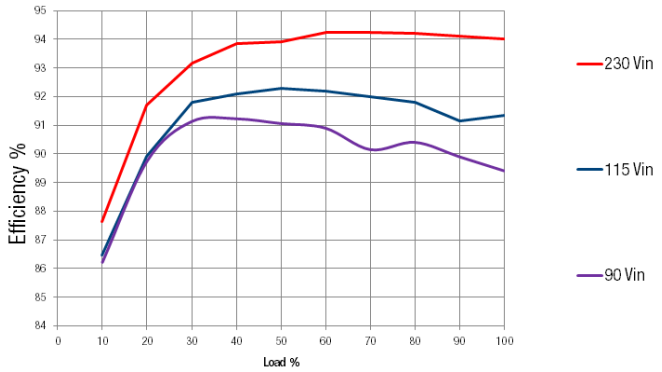
MVAC400-12 Efficiency (including 5V Aux Output)



MVAC400-24 Efficiency (including 5V Aux output)



MVAC400-48 Efficiency (includes 5V Aux output)

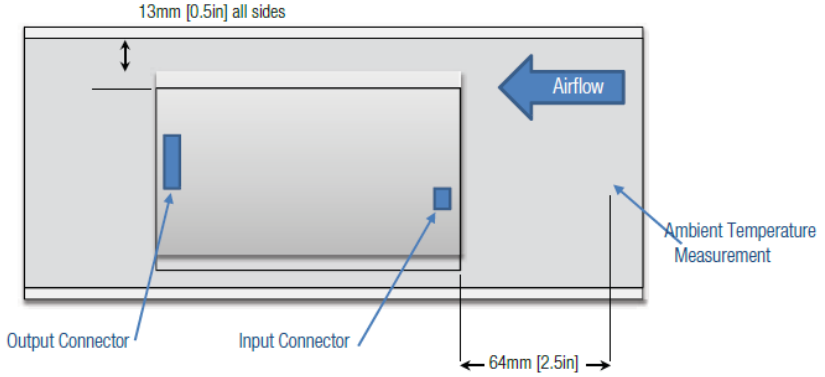


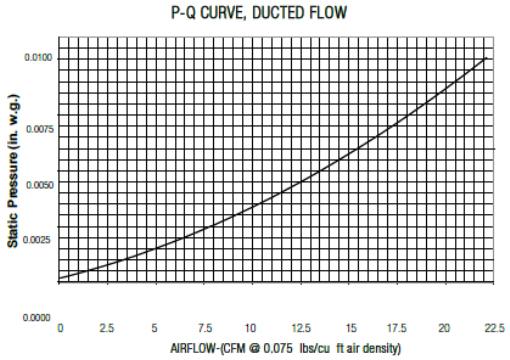
Inrush Current Time: 100 msec/div, Ch1: 500 V/div, Ch4: 20 A/div,
Vin: 264 VAC, Ipk = 15.1A AC applied at peak of sine wave

THERMAL CONSIDERATIONS

System thermal management is critical to the performance and reliability of the MVAC series power supplies. Performance derating curves are provided which can be used as a guideline for what can be achieved in a system configuration with controlled airflow at various input voltage conditions.

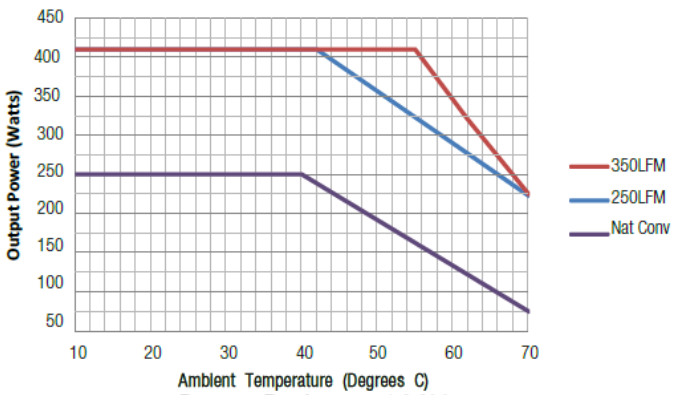
The air flow curves are generated using an AMCA 210-99 and ASHRAE 51-1999 compliant wind tunnel with heated inlet air and a controlled CFM providing a duct test section having a calculated average LFM. A correlation between the test setup and the actual system environment is paramount to understanding what can be achieved in an actual system. In a power supply of this density, cooling air moving both through the unit as well as around the unit strongly influences local temperatures. The wind tunnel test setup was constructed to produce a flow with a slight back pressure to induce both flow conditions by providing a small gap between the power supply and duct walls of 0.5" (13mm). The optimal and characterized airflow direction is from the input connector to the output connector (see diagram below). The P-Q flow curve for this test setup is also shown below.



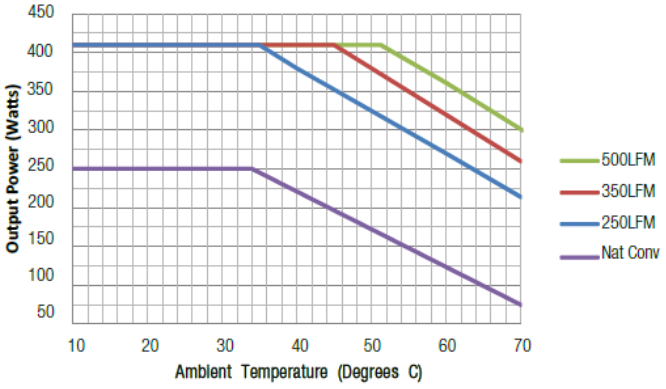


The natural convection data is obtained from a horizontally mounted power supply with un-obstructed flow at room temperature. At elevated temperature the power supply data is taken while it is surrounded by a large vented enclosure to minimize forced cross flows inherent in the elevated temperature test system.

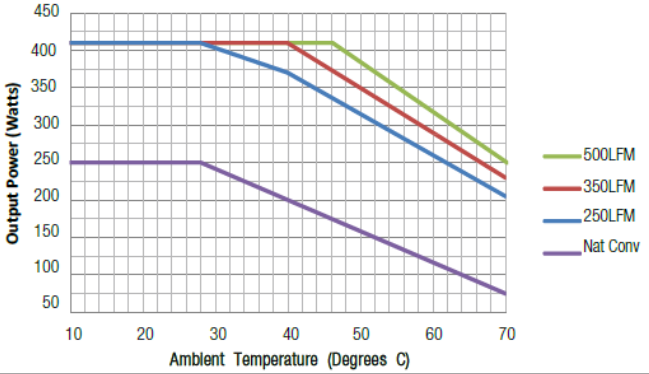
Power Rating at 230Vac



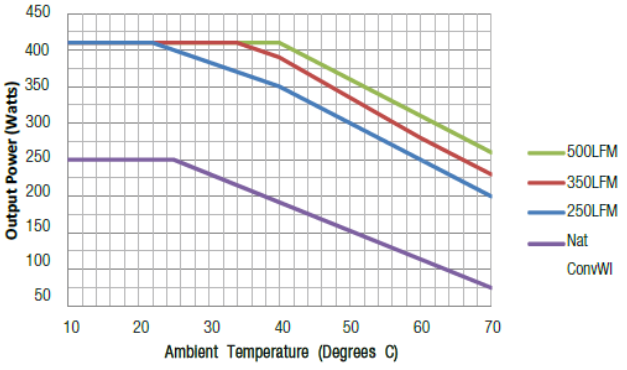
Power Rating at 120Vac



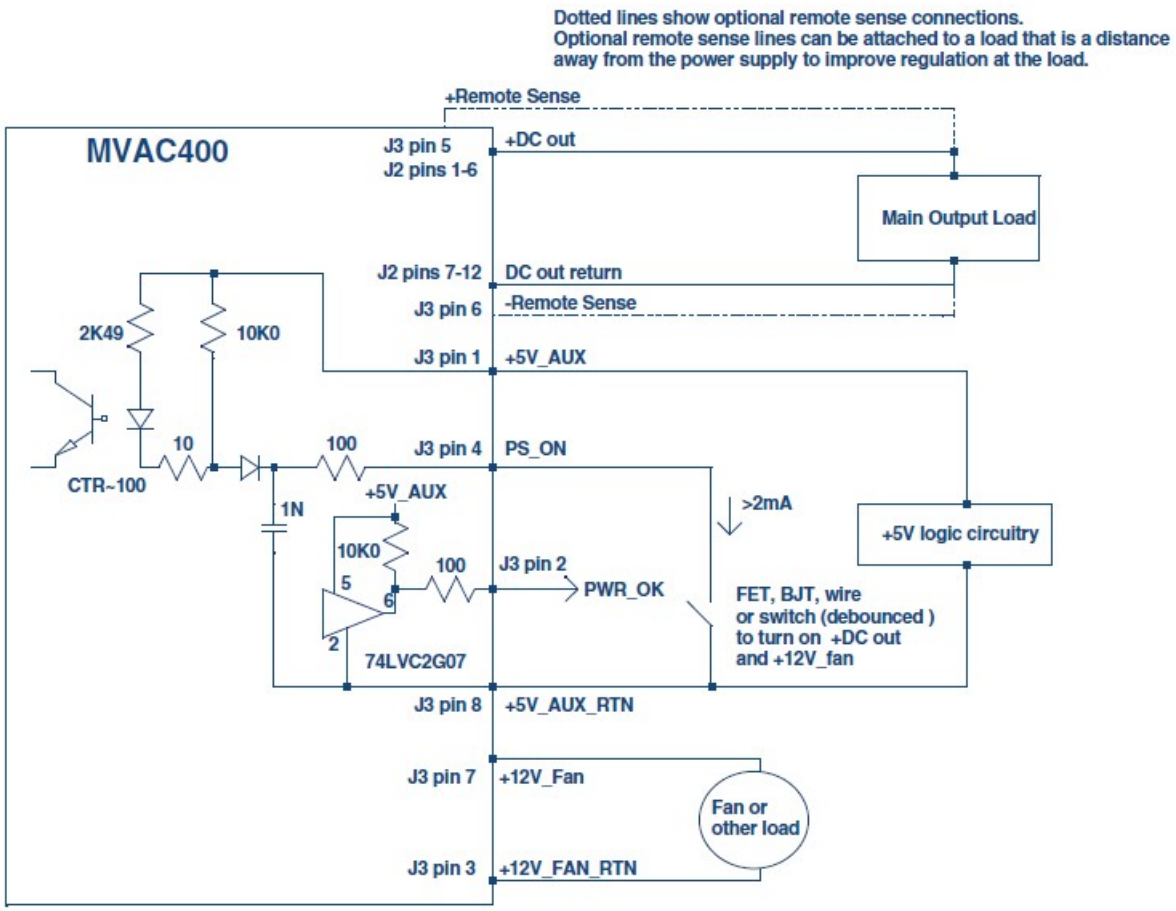
Power Rating at 100Vac



Power Rating at 90Vac



WIRING DIAGRAM FOR OUTPUT



Note: For parallel (current share) operation it is required to connect the sharing power supplies in parallel (+DC out connected together and DC out Return connected together on sharing power supplies. Since each output has an identical "droop" share characteristic then each output will intrinsically share the total load current

SAFETY CONSIDERATION NOTES:

1. Protective bonding conductor from the end product protective earthing terminal must be tied to TB1. For optimum EMI performance, while maintaining Class I safety isolation all 4 mounting holes must be tied to the end product protective earthing terminal. To maintain Class II safety isolation mounting holes MTG1 and MTG2 need to be isolated from protective earth and should use standoffs of non-conductive material.
2. This power supply requires mounting standoffs of minimum 6mm in height. If there is risk of chassis deformation or shorter standoff height is required, an appropriate insulator must be used under the power supply with adequate extension beyond the outline of the power supply. In all cases, the applicable safety standards must be applied to ensure proper creepage and clearance requirements are met.
3. The primary heatsink is considered a live primary circuit, and should not be touched. It is recommended that the primary heatsink be kept at least 3.5mm from chassis, and 7mm from secondary circuits. In all cases, the applicable safety standards must be applied to ensure proper creepage and clearance requirements are met.
4. This product is subject to the following operating requirements and the Life and Safety Critical Application Sales Policy: Refer to: http://www.murata-ps.com/requirements/
5. Used only in non-tropical conditions.
6. Double pole/neutral fusing.
