

GaAs MMIC T/R SWITCH

DC - 3 GHz

v04.0109

### **Typical Applications**

The HMC174MS8(E) is ideal for:

- Infrastructure & Repeaters
- Cellular/3G & WiMAX
- Portable Wireless
- LNA Protection
- Automotive Telematics
- Test Equipment

### Functional Diagram

### **General Description**

Low Insertion Loss: 0.5 dB

Positive Control: 0/+3V to 0 /+8V

MSOP - 8 SMT package, 14.8 mm<sup>2</sup>

High Input IP3: +60 dBm

High RF power Capability

Features

The HMC174MS8 & HMC174MS8E are low-cost SPDT switches in 8-lead MSOP packages for use in transmit-receive applications which require very low distortion at high signal power levels. The device can control signals from DC to 3 GHz and is especially suited for cellular/3G and WiMAX applications with only 0.5 dB loss. The design provides exceptional intermodulation performance; providing a +60 dBm third order intercept at 8 Volt bias. RF1 and RF2 are reflective shorts when "OFF". On chip circuitry allows single positive supply operation at very low DC current with control inputs compatible with CMOS and most TTL logic families.

### Electrical Specifications, $T_A = +25^{\circ}$ C, Vdd = +5 Vdc, 50 Ohm System

Parame	eter	Frequency	Min.	Тур.	Max.	Units

v04.0109

## GaAs MMIC T/R SWITCH DC - 3 GHz

### **Pin Descriptions**

Pin Number	Function	Description	Interface Schematic
1	A	See truth table and control voltage table.	0R
2	В	See truth table and control voltage table.	rian c i i i i i i i i i i i i i i i i i i i
3, 5, 8	RFC, RF1, RF2	This pin is DC coupled and matched to 50 Ohm. Blocking capacitors are required.	
4	Vdd	Supply Voltage.	
6, 7	GND	This pin must be connected to RF/DC ground.	

### **Typical Application Circuit**

### Notes:

- 1. Set logic gate and switch Vdd = +3V to +5V and use HCT series logic to provide a TTL driver interface.
- 2. Control inputs A/B can be driven directly with CMOS logic (HC) with Vdd of 3 to 8 Volts applied to the CMOS logic gates and to pin 4 of the RF switch.
- 3. DC Blocking capacitors are required for each RF port as shown. Capacitor value determines lowest frequency of operation.

4. Highest RF signal power capability is achieved with V set to +8V. The switch will operate properly (but at lower RF power capability) at bias voltages down to +3V.

### **Evaluation Circuit Board**

### List of Materials for Evaluation PCB 104124 [1]

Item	Description	
J1 - J3	PCB Mount SMA RF Connector	
J4 - J7	DC Pin	
C1 - C3	100 pF capacitor, 0402 Pkg.	
C4	10,000 pF capacitor, 0603 Pkg.	
U1	HMC174MS8(E) T/R Switch	
PCB [2]	104122 Evaluation PCB	

[1] Reference this number when ordering complete evaluation PCB

[2] Circuit Board Material: Rogers 4350

Downloaded from Arrow.com.

The circuit board used in the final application should be generated with proper RF circuit design techniques. Signal lines at the RF port should have 50 ohm impedance and the package ground leads should be connected directly to the ground plane similar to that shown above. The evaluation circuit board shown above is available from Hittite Microwave Corporation upon request.
