#### Features

Passive: No DC Bias Required Input IP3: +20 dBm LO/RF Isolation: 40 dB Wide IF Bandwidth: DC - 8 GHz Robust 1000V ESD, Class 1C 12 Lead Ceramic 3x3 mm SMT Package: 9mm<sup>2</sup>

#### **General Description**

The HMC292LC3B is a general purpose passive double balanced mixer in a leadless RoHS-Compliant SMT package that can be used as an upconverter or downconverter between 16 and 30 GHz. This mixer requires no external components or matching circuitry. The HMC292LC3B provides excellent LO to RF and LO to IF suppression due to optimized balun structures. The mixer operates with LO drive levels above +9 dBm. The HMC292LC3B eliminates the need for wire bonding, allowing use of surface mount manufacturing techniques.

## **Pin Descriptions**

Pin Number	Function	Description	Interface Schematic
1, 3, 4, 6, 7, 9	GND	Package bottom must also be connected to RF/DC ground.	
2	LO	This pin is DC coupled and matched to 50 Ohms.	
5	IF	This pin is DC coupled. For applications not requiring operation to DC, this port should be DC blocked externally using a series capacitor whose value has been chosen to pass the necessary IF frequency range. For operation to DC, this pin must not source or sink more than 2 mA of current or part non-function and possible part failure will result.	
8	RF	This pin is DC coupled and matched to 50 Ohm from 16 to 30 GHz.	
10, 11, 12	N/C	No connection required. These pins may be connected to RF/DC ground without affecting performance.

Circuit Board Material: Arlon 25FR

The circuit board used in this application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation board should be mounted to an appropriate heat sink. The evaluation circuit board shown is available from Hittite upon request.
