### EMC Components

Chip beads For power line MPZ series (for automotive)

⊗TDK

#### FEATURES

- Noise reduction solution for power line.
- O Compared to the MMZ series, has low direct current resistance for compatibility with large currents, optimal for low power consumption.
- Various frequency characteristics with 5 materials of different features for countermeasures against everything from general signals to high-speed signals.
- O Performs well even in signal lines where low direct current resistance is required.
- $\bigcirc$  Operating temperature range: -55 to +125°C

#### APPLICATION

O Various ECUs, powertrains, body controls, and car multimedia (telematics).

#### PART NUMBER CONSTRUCTION

MPZ	1608	S	471	А	Т	D25
Series name	L×W×T dimensions 1.6×0.8×0.6 mm 1.6×0.8×0.8 mm	Material name	Impedance (Ω) at 100MHz	Characteristic type	Packaging style	Internal code

Please be sure to request delivery specifications that provide further details on the features and specifications of the products for proper and safe use.

### **REMINDERS FOR USING THESE PRODUCTS**

Before using these products, be sure to request the delivery specifications.

### SAFETY REMINDERS

Please pay sufficient attention to the warnings for safe designing when using this products.

<ul> <li>The storage period is within 12 months. Be sure to follow the storage conditions (temperature: 5 to 40°C, humidity: 10 to 75% RH o less).</li> <li>If the storage period elapses, the soldering of the terminal electrodes may deteriorate.</li> </ul>				
○ Do not use or store in locations where there are conditions such as gas corrosion (salt, acid, alkali, etc.).				
<ul> <li>Before soldering, be sure to preheat components.</li> <li>The preheating temperature should be set so that the temperature difference does not exceed 150°C.</li> </ul>	erence between the solder temperature and chip temperature			
Soldering corrections after mounting should be within the range of the conditions determined in the specifications. If overheated, a short circuit, performance deterioration, or lifespan shortening may occur.				
When embedding a printed circuit board where a chip is mounted to a set, be sure that residual stress is not given to the chip due to the overall distortion of the printed circuit board and partial distortion such as at screw tightening portions.				
Self heating (temperature increase) occurs when the power is turned ON, so the tolerance should be sufficient for the set thermal design.				
<ul> <li>Carefully lay out the coil for the circuit board design of the non-magnetic A malfunction may occur due to magnetic interference.</li> </ul>	shield type.			
$\bigcirc$ Use a wrist band to discharge static electricity in your body through the g	grounding wire.			
$\bigcirc$ Do not expose the products to magnets or magnetic fields.				
$\bigcirc$ Do not use for a purpose outside of the contents regulated in the delivery	y specifications.
