EMC Components

Chip beads For power line GHz noise countermeasure MPZ-E series

MPZ1005-E type

FEATURES

- Noise reduction solution for power line.
- C Lineup includes products with material S, which can attain impedance from low frequency bands to high frequency bands at GHz bands, and products with material Y, where impedance is steeply raised at GHz bands.
- O Compared to the MPZ series, it can attain high impedance at GHz bands.
- Compared to the MMZ-E series, has low direct current resistance for compatibility with large currents, optimal for low power consumption.
- Performs well even in signal lines where low direct current resistance is required.
- Operating temperature range: -55 to +125°C

APPLICATION

O Noise removal for mobile devices such as smartphones and tablet terminals, and various modules.

O Noise removal for PCs and recorders, household appliances such as STBs, smart grids, and industrial equipment.

REMINDERS FOR USING THESE PRODUCTS

Before using these products, be sure to request the delivery specifications.

SAFETY REMINDERS

Please pay sufficient attention to the warnings for safe designing when using this products.

The storage period is within 12 months. Be sure to follow the storage conditions (temperature: 5 to 40°C, humidity: 10 to 75% RH or less). If the storage period elapses, the soldering of the terminal electrodes may deteriorate.					
Do not use or store in locations where there are conditions such as gas corrosion (salt, acid, alkali, etc.).					
Before soldering, be sure to preheat components. The preheating temperature should be set so that the temperature difference between the solder temperature and chip temperature does not exceed 150°C.					
Soldering corrections after mounting should be within the range of the conditions determined in the specifications. If overheated, a short circuit, performance deterioration, or lifespan shortening may occur.					
When embedding a printed circuit board where a chip is mounted to a set, be sure that residual stress is not given to the chip due to the overall distortion of the printed circuit board and partial distortion such as at screw tightening portions.					
 Self heating (temperature increase) occurs when the power is tu design. 	rned ON, so the tolerance should be sufficient for the set thermal				
 Carefully lay out the coil for the circuit board design of the non-magnetic shield type. A malfunction may occur due to magnetic interference. 					
\bigcirc Use a wrist band to discharge static electricity in your body through the grounding wire.					
○ Do not expose the products to magnets or magnetic fields.					
\bigcirc Do not use for a purpose outside of the contents regulated in the d	elivery specifications.
