

FEATURES

- 1.8 V analog and digital core supply voltage**
- Serial data link with reduced range LVDS outputs**
- Correlated double sampler (CDS) with -3 dB, 0 dB, +3 dB, +6 dB gain**
- 6 dB to 42 dB, 10-bit variable gain amplifier (VGA)**
- 14-bit, 65 MHz analog-to-digital converter**
- Black level clamp with variable level control**
- Complete on-chip timing generator**
- Precision Timing* core with 240 ps resolution @ 65 MHz**
- On-chip 3 V horizontal and RG drivers**
- 6 mm × 6 mm, 84-ball CSP_BGA package**

APPLICATIONS

- Professional HDTV camcorders**
- Professional, high-end digital cameras**
- Broadcast cameras**
- Industrial high speed cameras**

GENERAL DESCRIPTION

The AD9973 is a highly integrated dual channel CCD signal processor for high speed digital video camera applications. Each channel is specified at pixel rates of up to 65 MHz, and consists of a complete analog front end with analog-to-digital conversion, combined with a programmable timing driver. The *Precision Timing* core allows adjustment of high speed clocks with 240 ps resolution at 65 MHz operation. The AD9973 also contains a reduced range LVDS interface for the dual-channel data outputs.

Each analog front end (AFE) includes black level clamping, CDS, VGA, and a 65 MSPS, 14-bit analog-to-digital converter. The timing driver provides the high speed CCD clock drivers for RG, HL, and H1 to H4. Operation is programmed using a 3-wire serial interface.

Packaged in a space-saving 6 mm × 6 mm, 84-ball CSP_BGA, the AD9973 is specified over an operating temperature range of -25°C to +85°C.
