

LTC4070EDDB: Simple Low-Iq Battery Charger/Protector With NTC Thermistor Input

DESCRIPTION

Demonstration Circuit DC1584A is a Simple Low-Iq Battery Charger/Protector With NTC Thermistor featuring the LTC[®]4070EDDB.

PERFORMANCE SUMMARY

Specifications are at $T_R = 25^\circ\text{C}$

SYMBOL	PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS
VBUS	Input voltage	$R_{LIMIT} = 169\Omega$	10	12	16	V
V(BAT)	Battery Float Voltage	'VFLOAT' jumper on 4.1V, Constant Voltage Mode. $T_{NTC} = 25^\circ\text{C}$	4.059		4.141	V
I(BAT)	Battery Charge Current	Constant Current Mode, $V_{in} = 12\text{V}$, $V_{CC} = 3.8\text{V}$		49.7		mA

QUICK START PROCEDURE

Refer to Figure 1 for the proper measurement equipment setup and jumper settings and follow the procedure below.

NOTE. When measuring the input or output voltage ripple, care must be taken to avoid a long ground lead on the oscilloscope probe. Measure the input or output voltage ripple by touching the probe tip directly across the VBUS or Vcc and GND terminals. See Figure 2 for proper scope probe technique.

1. Set PS1 = 12V, PS2 = 3.6V, "VFLOAT" (JP2) to 4.1V. Observe I(VBUS) (AM1). The voltage on the battery is below the LTC4070EDDB's float voltage. So all the current is flowing into the battery, and that current is $(12\text{V} - 3.6\text{V}) / 169(R1) = 49.7\text{mA}$.
2. If "LBO" LED lit, decrease PS2 until off. Observe BAT (VM2). The LBO output goes high when the battery voltage is below 3.2V, but it has 200-300mV of hysteresis. So it may not go low until 3.5V, with Vcc \uparrow .
3. Increase PS2 until LBO is lit. Observe BAT (VM2).
4. Increase PS2 until HBO lit. Observe BAT (VM2). The HBO LED will light when the battery voltage is within ~50mV of the float voltage.
5. Disconnect PS2, AM2, and 3.6 Ω resistor. Observe BAT (VM2). The only limit to the Vcc voltage now is the LTC4070, so the voltage will rise to the float voltage.
6. Reset the Jumpers to their default position.

Note: All connections from equipment should be Kelvin connected directly to the board pins which they are connected on this diagram and any input or output leads should be twisted pair.
