

Chip Varistors

Countermeasure for surge voltage and static electricity

AVR series

Type: **AVR-M**
 AVRL

Issue date: September 2013

- All specifications are subject to change without notice.
- Conformity to RoHS Directive: This means that, in conformity with EU Directive 2002/95/EC, lead, cadmium, mercury, hexavalent chromium, and specific bromine-based flame retardants, PBB and PBDE, have not been used, except for exempted applications.

Varistors(SMD)

Countermeasure for Surge Voltage and Static Electricity

AVR Series AVR-M, AVRL Types

Varistors are voltage dependent nonlinear resistive elements with a resistance that decreases rapidly when the voltage is over the constant value.

Varistor is equivalent with Zener diode of two series connection. Therefore, do not have polarity.

CURRENT vs. VOLTAGE CHARACTERISTICS

EQUIVALENT CIRCUIT

THE EFFECT OF THE VARISTOR WITHOUT VARISTOR

A malfunction and failure of electronic equipment

WITH VARISTOR

Suppress abnormal voltage by inserting varistor in a circuit

• All specifications are subject to change without notice.

FEATURES

- No polarity, due to symmetrical current-voltage characteristics. Equivalent to anode common type Zener diode.
- Excellent electrostatic absorption capability. Response is as good or better than Zener diode. Keeps symmetrical current-voltage characteristics even after electrostatic absorption.
- Adopted the inner electrodes lamination structure. Wide range of varistor voltages are available in series (6.8 to 39V). Low capacitance items are available in series (1.1pF to). World's smallest 0402-, 0603-, 1005-, 1608-, 2012-chip types are available in series.
- Excellent mount reliability. Good for Pb-free soldering. Adopted (Ni/Sn) electroplating. Achieved good solderability and solder heat resistance.
- Can replace a Zener diode + capacitor combination. Reduced footprint and total mounting cost.

APPLICATIONS

- Electrostatic absorption
- Pulse noise absorption

TEMPERATURE RANGES

Type	AVR-M1005/1608/2012	AVR-M0402/0603/AVRL
Operating	-40 to +125°C	-40 to +85°C
Storage	-40 to +125°C	-40 to +85°C

APPLICATION EXAMPLES

Consumer product	Application
Mobile phone	Data terminal
Digital video camera	LCD panel
Digital camera	Touch panel
PDA	Button and switch unit
Note PC	Battery terminal
DVD-ROM, CD-ROM	Audio-Video input-output terminal
CD/MD/MP3 player	Microphone/receiver unit
Game machine	Controller unit
	CAN-BUS
	ECU
In-car equipment	Connector
	Air conditioner panel
	Car audio
	Car navigation

INTERNAL STRUCTURE

CIRCUITS SYMBOL

OPERATIONAL VOLTAGE RANGES

RECOMMENDED REFLOW SOLDERING CONDITIONS

Item	Specification	Specification	
		For eutectic solder	For lead-free solder
Tpre	Preheating temperature	160 to 180°C	150 to 180°C
Tmelt	Solder melting temperature	200°C	230°C
Tpeak	Peak temperature	240°C max.	260°C max.
tpre	Preheating time	100s max.	120s max.
tmelt	Time to reach higher than the solder melting temperature	30s max.	40s max.
	Number of possible reflow cycles	2 max.	2 max.

• All specifications are subject to change without notice.

TERMINOLOGY

Item	Unit	Terminology
Varistor voltage (Breakdown voltage)	V _{1mA} (V)	Voltage measured across the varistor when DC1mA is applied.
Maximum continuous voltage (Rated voltage)	V _{dc} (V)	Maximum DC voltage that can be applied continuously. Varistor leakage current: 50μA max. (Within the range of maximum allowable circuit voltage)
Clamping voltage	V _{cl} (V)	Voltage appearing across the varistor when a pulse current (8/20μs*) of specified peak value is applied.
Maximum energy	E (Joule)	Maximum energy that can be absorbed without deteriorating varistor characteristics when an impulse (10/1000μs*) is applied once.
Maximum peak current	I _p (A)	Maximum current that can be withstood without deteriorating varistor characteristics when an impulse current (8/20μs*) is applied once.
Capacitance	C (pF)	Capacitance measured at 1kHz (or 1MHz) of oscillator frequency and 1V _{rms} of oscillator voltage.
