General Description

The HMC-C016 is a GaAs MMIC PHEMT Low Noise Amplifier in a miniature, hermetic module which operates between 7 and 17 GHz. This high dynamic range amplifier provides 22 dB of gain, 2 dB noise figure and up to +14 dBm of output power at 1 dB gain compression while operating from a single positive supply between +8 and +16 volts. The I/Os are internally matched to 50 Ohms and internally DC blocked for robust performance. The module features removable SMA connectors which can be detached to allow direct connection of the I/O pins to a microstrip or coplanar circuit.

Electrical Specifications, T_A = +25° C, Vs= +8V to +16V
