

#### **Typical Applications**

Low noise MMIC VCO w/Divide-by-16 for:

- VSAT Radio
- Point to Point/Multipoint Radio
- Test Equipment & Industrial Controls
- Military End-Use
- Automotive Radar

### MMIC VCO w/ DIVIDE-BY-16, 23.8 - 24.8 GHz

#### Features

Pout: +12 dBm Phase Noise: -95 dBc/Hz @100 KHz Typ. No External Resonator Needed Single Supply: +5V @ 220 mA 24 Lead 4x4mm QFN Package: 9 mm<sup>2</sup>

#### **General Description**

The HMC533LP4 & HMC533LP4E are GaAs InGaP Heterojunction Bipolar Transistor (HBT) MMIC VCOs. The HMC533LP4 & HMC533LP4E integrate resonators, negative resistance devices, varactor diodes and feature a divide-by-16 output. The VCO's phase noise performance is excellent over temperature, shock, and process due to the oscillator's monolithic structure. Power output is +12 dBm typical from a +5V supply voltage. Prescaler function can be disabled to conserve current if not required. The voltage controlled oscillator is packaged in a leadless QFN 4 x 4 mm surface mount package.

The circuit board used in the final application should use RF circuit design techniques. Signal lines should have 50 ohm impedance while the package ground leads and backside ground slug should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
