## FEATURES

True single-supply operation
Input voltage range extends below ground
Output swings rail-to-rail
Single-supply capability from 5 V to 30 V
Dual-supply capability from $\pm 2.5 \mathrm{~V}$ to $\pm 15 \mathrm{~V}$
High load drive
Capacitive load drive of $\mathbf{3 5 0} \mathbf{~ p F , G}=+1$
Minimum output current of 15 mA
Excellent ac performance for low power
$800 \mu \mathrm{~A}$ maximum quiescent current per amplifier
Unity-gain bandwidth: 1.8 MHz
Slew rate of $3 \mathrm{~V} / \mu \mathrm{s}$
Good dc performance
$800 \mu \mathrm{~V}$ maximum input offset voltage
$2 \mu \mathrm{~V} /{ }^{\circ} \mathrm{C}$ typical offset voltage drift
25 pA maximum input bias current
Low noise
13 nV/VHz @ 10 kHz
No phase inversion

## ENHANCED PRODUCT FEATURES

Supports defense and aerospace applications (AQEC standard)
Military temperature range $\left(-55^{\circ} \mathrm{C}\right.$ to $\left.+125^{\circ} \mathrm{C}\right)$
Controlled manufacturing baseline
One assembly/test site
One fabrication site
Enhanced product change notification
Qualification data available on request

## APPLICATIONS

Photodiode preamps

## Active filters

12-bit to 14-bit data acquisition systems Low power references and regulators

## CONNECTION DIAGRAM

## GENERAL DESCRIPTION

The AD822-EP is a dual precision, low power FET input op amp that can operate from a single supply of 5 V to 30 V or dual supplies of $\pm 2.5 \mathrm{~V}$ to $\pm 15 \mathrm{~V}$. It has true single-supply capability with an input voltage range extending below the negative rail, allowing the AD822 to accommodate input signals below ground in the single-supply mode. Output voltage swing extends to within 10 mV of each rail, providing the maximum output dynamic range.

Figure 2. Input Voltage Noise vs. Frequency
Offset voltage of $800 \mu \mathrm{~V}$ maximum, offset voltage drift of $2 \mu \mathrm{~V} /{ }^{\circ} \mathrm{C}$, input bias currents below 25 pA , and low input voltage noise provide dc precision with source impedances up to a gigaohm. The 1.8 MHz unity-gain bandwidth, -93 dB THD at 10 kHz , and $3 \mathrm{~V} / \mu \mathrm{s}$ slew rate are provided with a low supply current of $800 \mu \mathrm{~A}$ per amplifier.

## REVISION HISTORY

6/10—Revision 0: Initial Version

The AD822-EP drives up to 350 pF of direct capacitive load as a follower and provides a minimum output current of 15 mA . This allows the amplifier to handle a wide range of load conditions. Its combination of ac and dc performance, plus the outstanding load drive capability, results in an exceptionally versatile amplifier for the single-supply user.

The AD822-EP operates over the military temperature range of $-55^{\circ} \mathrm{C}$ to $+125^{\circ} \mathrm{C}$.
The AD822-EP is offered in an 8-lead SOIC_N package.
Full details about this enhanced product are available in the AD822 data sheet, which should be consulted in conjunction with this data sheet.

${ }^{1}$ This is a functional specification. Amplifier bandwidth decreases when the input common-mode voltage is driven in the range ( $\mathrm{V}+-1 \mathrm{~V}$ ) to $\mathrm{V}+$. Common-mode error voltage is typically less than 5 mV with the common-mode voltage set at 1 V below the positive supply.
${ }^{2} V_{O L}-V_{E E}$ is defined as the difference between the lowest possible output voltage ( $V_{O L}$ ) and the negative voltage supply rail ( $\mathrm{V}_{E E}$ ). $\mathrm{V}_{\mathrm{CC}}-\mathrm{V}_{\mathrm{OH}}$ is defined as the difference between the highest possible output voltage $\left(\mathrm{V}_{\mathrm{OH}}\right)$ and the positive supply voltage $\left(\mathrm{V}_{\mathrm{cc}}\right)$.

## ABSOLUTE MAXIMUM RATINGS

Table 4.

| Parameter | Rating |
| :--- | :--- |
| Supply Voltage | $\pm 18 \mathrm{~V}$ |
| Internal Power Dissipation | Observe Maximum <br> Junction Temperature <br> 8-Lead SOIC_N (R) <br>  <br>  <br> Input Voltage <br>  <br>  <br> Output Short-Circuit Duration <br> $((\mathrm{V}-)-20 \mathrm{~V})$ to <br> Differential Input Voltage <br> Storage Temperature Range (R) <br> Operating Temperature Range <br> Maximum Junction Temperature <br> Lead Temperature <br> $\quad$ (Soldering, 60 sec) |

## THERMAL RESISTANCE

$\theta_{\text {JA }}$ is specified for the worst-case conditions, that is, a device soldered in a circuit board for surface-mount packages.

Table 5. Thermal Resistance

| Package Type | $\boldsymbol{\theta}_{\text {JA }}$ | $\boldsymbol{\theta}_{\text {Jc }}$ | Unit |
| :--- | :--- | :--- | :--- |
| 8-lead SOIC_N (R) | 160 | 43 | ${ }^{\circ} \mathrm{C} / \mathrm{W}$ |

## ESD CAUTION

|  | ESD (electrostatic discharge) sensitive device. <br> Charged devices and circuit boards can discharge <br> without detection. Although this product features <br> patented or proprietary protection circuitry, damage <br> may occur on devices subjected to high energy ESD. <br> Therefore, proper ESD precautions should be taken to <br> avoid performance degradation or loss of functionality. |
| :--- | :--- |

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

NOTES

## AD822-EP

## NOTES

[^0]:    ${ }^{1}$ This is a functional specification. Amplifier bandwidth decreases when the input common-mode voltage is driven in the range (V+-1 V ) to $\mathrm{V}+$. Common-mode error voltage is typically less than 5 mV with the common-mode voltage set at 1 V below the positive supply.
    ${ }^{2} \mathrm{~V}_{\mathrm{OL}}-\mathrm{V}_{E E}$ is defined as the difference between the lowest possible output voltage ( $\mathrm{V}_{\mathrm{OL}}$ ) and the negative voltage supply rail ( $\mathrm{V}_{\mathrm{EE}}$ ). $\mathrm{V}_{C C}-\mathrm{V}_{\mathrm{OH}}$ is defined as the difference between the highest possible output voltage $\left(\mathrm{V}_{\mathrm{OH}}\right)$ and the positive supply voltage $\left(\mathrm{V}_{\mathrm{cC}}\right)$.

[^1]:    ${ }^{1} Z=$ RoHS Compliant Part.
