

FEATURES

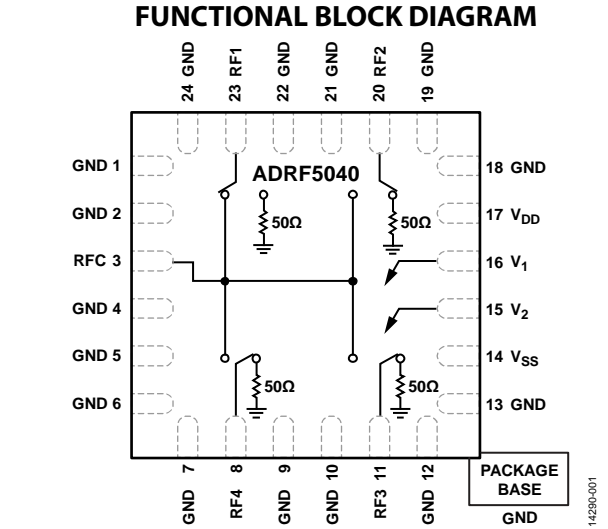

- Nonreflective 50 Ω design**
- Positive control range: 0 V to 3.3 V**
- Low insertion loss: 0.8 dB at 8.0 GHz**
- High isolation: 34 dB at 8.0 GHz**
- High power handling**
 - 33 dBm through path
 - 27 dBm termination path
- High linearity**
 - 1 dB compression (P1dB): 37 dBm typical
 - Input third-order intercept (IIP3): 58 dBm typical at 8.0 GHz
- ESD rating: 4 kV human body model (HBM)**
- 4 mm \times 4 mm, 24-lead LFCSP package**
- No low frequency spurious**
- RF settling time (0.05 dB margin of final RF_{OUT}): 9 μ s**

APPLICATIONS

- Test instrumentation
- Microwave radios and very small aperture terminals (VSATs)
- Military radios, radars, and electronic counter measures (ECMs)
- Fiber optics and broadband telecommunications

GENERAL DESCRIPTION

The **ADRF5040** is a general-purpose, broadband high isolation, nonreflective single-pole, quad-throw (SP4T) switch in an LFCSP surface-mount package. Covering the 9 kHz to 12.0 GHz range, the switch offers high isolation and low insertion loss. The switch features 34 dB isolation and 0.8 dB insertion loss up to

8.0 GHz, and a 9 μ s settling time of 0.05 dB margin of the final radio frequency output (RF_{OUT}). The switch operates using positive control voltage of 3.3 V and 0 V and requires +3.3 V and -3.3 V supplies. The **ADRF5040** is packaged in a 4 mm \times 4 mm, surface-mount LFCSP package.

	Case Temperature Range (T_{CASE})			-40	+85	$^\circ\text{C}$

DIGITAL CONTROL VOLTAGE SPECIFICATIONS

$V_{DD} = 3.3\text{ V} \pm 10\%$, $V_{SS} = -3.3\text{ V} \pm 10\%$, $T_{CASE} = -40^{\circ}\text{C}$ to $+85^{\circ}\text{C}$, unless otherwise noted.

Table 2.

Parameter	Symbol	Min	Typ	Max	Unit	Test Condition/Comments
INPUT CONTROL VOLTAGE (V_1, V_2)						<1 μA typical
Low	V_{IL}	0		0.8	V	
High	V_{IH}	1.4		$V_{DD} + 0.3$	V	

BIAS AND SUPPLY CURRENT SPECIFICATIONS

$T_{CASE} = -40^{\circ}\text{C}$ to $+85^{\circ}\text{C}$, unless otherwise noted.

Table 3.

Parameter	Symbol	Min	Typ	Max	Unit
SUPPLY CURRENT					
$V_{DD} = 3.3\text{ V}$	I_{DD}		20	100	μA
$V_{SS} = -3.3\text{ V}$	I_{SS}		20	100	μA

ABSOLUTE MAXIMUM RATINGS

Table 4.

Parameter	Rating
Positive Supply Voltage (V_{DD}) Range	-0.3 V to +3.7 V
Negative Supply Voltage (V_{SS}) Range	-3.7 V to +0.3 V
Control Voltage (V_1, V_2) Range	-0.3 V to $V_{DD} + 0.3$ V
RF Input Power ¹ ($V_{DD}, V_1, V_2 = 3.3$ V, $V_{SS} = -3.3$ V, $T_A = 85^\circ\text{C}$, Frequency = 2 GHz)	
Through Path	34 dBm
Termination Path	28 dBm
Hot Switch Power Level ($V_{DD} = 3.3$ V, $T_A = 85^\circ\text{C}$, Frequency = 2 GHz)	30 dBm
Storage Temperature Range	-65°C to +150°C
Channel Temperature	135°C
Thermal Resistance (Channel to Package Bottom)	
Through Path	83°C/W
Terminated Path	100°C/W
MSL Rating	MSL3
ESD Sensitivity	
Human Body Model (HBM)	4 kV (Class 3)
Charged Device Model (CDM)	1.25 kV

¹ For the recommended operating conditions, see Table 1.

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

PIN CONFIGURATION AND FUNCTION DESCRIPTIONS

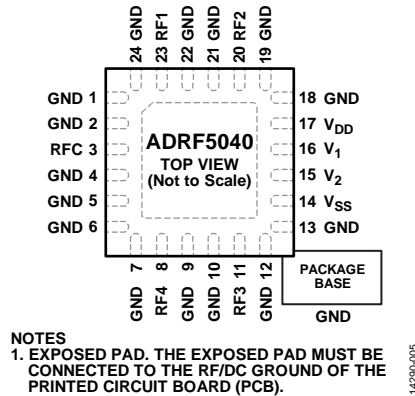

Figure 5. Pin Configuration

Table 5. Pin Function Descriptions

Pin No.	Mnemonic	Description
1, 2, 4 to 7, 9, 10, 12, 13, 18, 19, 21, 22, 24	GND	Ground. The package bottom has an exposed metal pad that must connect to the printed circuit board (PCB) RF/dc ground. See Figure 6 for the GND interface schematic.
3	RFC	RF Common Port. This pin is dc-coupled and matched to 50 Ω. A dc blocking capacitor is required if the RF line potential is not equal to 0 V dc.
8	RF4	RF4 Port. This pin is dc-coupled and matched to 50 Ω. A dc blocking capacitor is required if the RF line potential is not equal to 0 V dc.
11	RF3	RF3 Port. This pin is dc-coupled and matched to 50 Ω. A dc blocking capacitor is required if the RF line potential is not equal to 0 V dc.
14	V _{SS}	Negative Supply Voltage Pin.
15	V ₂	Control Input Pin 2. See Table 2 and Table 6.
16	V ₁	Control Input Pin 1. See Table 2 and Table 6.
17	V _{DD}	Positive Supply Voltage.
20	RF2	RF2 Port. This pin is dc-coupled and matched to 50 Ω. A dc blocking capacitor is required if the RF line potential is not equal to 0 V dc.
23	RF1	RF1 Port. This pin is dc-coupled and matched to 50 Ω. A dc blocking capacitor is required if the RF line potential is not equal to 0 V dc.
	EPAD	Exposed Pad. The exposed pad must be connected to the RF/dc ground of the PCB.

THEORY OF OPERATION

The **ADRF5040** requires a positive supply voltage applied to the V_{DD} pin and a negative voltage supply applied to the V_{SS} pin. Bypassing capacitors are recommended on the supply lines to minimize RF coupling.

The **ADRF5040** is controlled via two digital control voltages applied to the V_1 pin and the V_2 pin. A small value bypassing capacitor is recommended on these digital signal lines to improve the RF signal isolation.

The **ADRF5040** is internally matched to $50\ \Omega$ at the RF input port (RFC) and the RF output ports (RF1, RF2, RF3, and RF4); therefore, no external matching components are required. The

RF1 through RF4 pins are dc-coupled, and dc blocking capacitors are required on the RF paths. The design is bidirectional; the input and outputs are interchangeable.

The **ADRF5040** does not need any special power-up sequencing, and the relative order to power up the V_{DD} and V_{SS} supplies is not important. The V_1 and V_2 control signals can be applied only after V_{DD} is powered up; this sequence avoids forward biasing and causing damage to the internal ESD protection circuits. Turn on the RF signal after the device supply settles to a steady state.

APPLICATIONS INFORMATION

EVALUATION BOARD

The [ADRF5040-EVALZ](#) evaluation board shown in Figure 27 is designed using proper RF circuit design techniques. Signal lines at the RF port have 50 Ω impedance, and the package ground

leads and backside ground slug must be connected directly to the ground plane. The evaluation board is available from Analog Devices, Inc. upon request.
