

DC2229A-A: LTC3877
DC2229A-B: LTC3877/LTC3874
High Current Step-Down Converter

DESCRIPTION

Demonstration circuits 2229A-A and 2229A-B feature the [LTC[®]3877](#) in two high output current, high efficiency, VID programmed step-down converters with sub-m Ω DCR sensing. For both converters, the input voltage range is 6V to 14V and the switching frequency is 400kHz.

The DC2229A-A provides two outputs. V_{OUT1} is VID programmable from 0.6V to 1.23V and V_{OUT2} is set for 1.5V. Both rails have a maximum load current of 30A. The DC2229A-B assembly is a four phase converter providing a VID programmable output of 0.6V to 1.23V with a maximum load current of 120A. Phases 1 and 2 are controlled by the LTC3877 and phases 3 and 4 are controlled by the LTC3874 slave controller.

The demo board uses 0.25 μ H inductors with a DCR value of 0.325m Ω . The LTC3877 and LTC3874 employ a proprietary sub-m Ω DCR sensing architecture which enhances the signal to provide accurate control of the inductor current. The low DCR inductors, along with the use of low Q_g /low $R_{DS(ON)}$ discrete FETs and strong gate drivers provides high efficiency for high output current supplies. The full load efficiency is 90.3%, as seen on the 1.5V rail of the LTC3877 dual output converter (DC2229A-A assembly) with an input voltage of 12V.

Additional features of this demo board include:

- Remote sensing
- PLLIN and CLKOUT pins
- PGOOD, RUN and TK/SS pins
- Optional resistors to tie two or more phases together
- Optional footprints for BSG0811 dual channel MOSFETs
- Optional NTC network on the ITEMP pin of the LTC3877 for less current limit variation over temperature
- Dynamic load circuit

The demo board uses a high density, two-sided drop-in layout. The core components for each dual phase section consists of MOSFETs, inductors, ceramic C_{IN} , ceramic C_{OUT} on the top layer and the control circuit on the bottom, resides in a 1.3" x 1.3" area of the board.

The LTC3877 and LTC3874 data sheets provide a complete description of the IC operation and application information. These data sheets must be read in conjunction with the quick start guide.

Design files for this circuit board are available at <http://www.linear.com/demo/DC2229A>

DEMO MANUAL DC2229A

PERFORMANCE SUMMARY

Table 1. DC2229A-A Performance Summary ($T_A = 25^\circ\text{C}$), No Airflow

PARAMETER	CONDITIONS	VALUES
Minimum Input Voltage		6V
Maximum Input Voltage		14V
Output Voltage V_{OUT1} , VID programmed	$I_{OUT1} = 0\text{A to }30\text{A}$, $V_{IN} = 6\text{V to }14\text{V}$ VID0–VID5 = L VID0, VID5 = L, VID1–VID4 = H VID0–VID5 = H	0.6V \pm 1% 0.9V \pm 1% 1.23V \pm 1%
Output Voltage V_{OUT2}	$I_{OUT2} = 0\text{A to }30\text{A}$, $V_{IN} = 6\text{V to }14\text{V}$	1.5V \pm 1.5%
V_{OUT1} Maximum Output Current, I_{OUT1}	$V_{IN} = 6\text{V to }14\text{V}$	30A
V_{OUT2} Maximum Output Current, I_{OUT2}	$V_{IN} = 6\text{V to }14\text{V}$	30A
Nominal Switching Frequency		400kHz
Efficiency	$V_{OUT1} = 1.2\text{V}$, $I_{OUT1} = 30\text{A}$, $V_{IN} = 12\text{V}$	89.1% typical
See Figures 3 to 5	$V_{OUT2} = 1.5\text{V}$, $I_{OUT2} = 30\text{A}$, $V_{IN} = 12\text{V}$	90.3% typical

Table 2. DC2229A-B Performance Summary ($T_A = 25^\circ\text{C}$), No Airflow

PARAMETER	CONDITIONS	VALUES
Minimum Input Voltage		6V
Maximum Input Voltage		14V
Output Voltage V_{OUT} , VID programmed	$I_{OUT1} = 0\text{A to }120\text{A}$, $V_{IN} = 6\text{V to }14\text{V}$ VID0–VID5 = L VID0, VID5 = L, VID1–VID4 = H VID0–VID5 = H	0.6V \pm 1% 0.9V \pm 1% 1.23V \pm 1%
V_{OUT} Maximum Output Current, I_{OUT}	$V_{IN} = 6\text{V to }14\text{V}$	120A
Nominal Switching Frequency		400kHz
Efficiency, See Figure 6	$V_{OUT} = 1.2\text{V}$, $I_{OUT1} = 120\text{A}$, $V_{IN} = 12\text{V}$	88.8% typical

QUICK START PROCEDURE

Demonstration circuits 2229A-A and 2229A-B are easy to set up to evaluate the performance of the LTC3877 and LTC3874. Please refer to Figure 1 (DC2229A-A assembly) and Figure 2 (DC2229A-B assembly) for the proper measurement equipment setup and follow the procedure below.

1) With power off, connect the input supply, load and meters as shown in Figure 1 or Figure 2. Preset the load to 0A and V_{IN} supply to be 0V. For both assemblies, place the jumpers in the following positions:

JP10	RUN	ON
JP8	MODE	FCM
JP7	VID_EN	H
JP1, JP6	VID0,VID5	L
JP2-JP5	VID1-VID4	H

2) Increase the input voltage to 12V.

3) Check the output voltage.

a) For the LTC3877 dual output converter (2229A-A assembly), V_{OUT1} should be $0.9V \pm 1\%$. V_{OUT2} should be $1.5V \pm 1.5\%$.

b) For the LTC3877/LTC3874 four phase converter (DC2229A-B assembly), V_{OUT1} should be $0.9V \pm 1\%$.

4) Next, apply full load and re-measure V_{OUT} .

a) For the LTC3877 dual output converter (DC2229A-A assembly), the full load current is 30A for V_{OUT1} and 30A for V_{OUT2} .

b) For the LTC3877/LTC3874 four phase converter (DC2229A-B assembly), the full load current is 120A.

5) Re-check regulation.

6) Adjust the input voltage and load current to the desired levels within their limits and observe the regulation, output ripple, load step response, efficiency and other parameters.

7) Adjust V_{OUT1} with VID0-VID5 at JP1-JP6. Refer to the data sheet for the VID programming table.

NOTE 1: To monitor the output voltage ripple, use the BNC connectors labeled V_{OUT1} and V_{OUT2} . V_{OUT1} is at J9 and V_{OUT2} is at J10.

NOTE 2: Do not connect load between the VO1_SNS⁺ and VO1_SNS⁻ turrets or between the VO2_SNS⁺ and VO2_SNS⁻ turrets. This could damage the converter. Only apply load across the stud connectors on the edge of the board which are located at J3 through J8.

Dynamic Load Circuit (Optional)

Demonstration circuit 2229A provides a simple load step circuit consisting of a MOSFET and sense resistor for V_{OUT1} and V_{OUT2} . To apply a load step, follow the steps below.

1) Pre-set the amplitude of a pulse generator to 0.0V and the duty cycle to 5% or less.

2) To monitor the load step current, connect a scope probe across the ISTEP^{+/-} turrets for that rail.

3) Connect the output of the pulse generator to the PULSE GEN turret for the rail under test and connect the return to the adjacent GND turret.

4) With the converter running, slowly increase the amplitude of the pulse generator output to provide the desired load step pulse height. The scaling for the load step signal is 2mV/A.

5) For the four-phase LTC3877/LTC3874 converter (DC2229A-B assembly), either load step circuit can be used.

CUSTOMER NOTICE

USE OF THIS TECHNOLOGY FOR ANY APPLICATION REQUIRING HIGH CURRENT AND LOW DCR INDUCTORS REQUIRES THE USER TO BE RESPONSIBLE FOR THE DESIGN OF THE INDUCTOR TO ACHIEVE THE DESIRED PERFORMANCE. THE USER SHOULD CONSULT WITH LINEAR TECHNOLOGY FOR ASSISTANCE IN THE DESIGN OF THE INDUCTOR.

CUSTOMER NOTICE
 LDC TECHNOLOGY HAS MADE A BEST EFFORT TO DESIGN A SCHEMATIC THAT IS ACCURATE AND COMPLETE. HOWEVER, IT REMAINS THE CUSTOMER'S RESPONSIBILITY TO VERIFY THE SCHEMATIC IS CORRECT FOR THEIR APPLICATION. COMPONENT SUBSTITUTION AND PARTS LIST CHANGES ARE NOT PERMITTED WITHOUT LDC TECHNOLOGY'S WRITTEN PERMISSION. CONTACT LDC TECHNOLOGY FOR APPLICATIONS ENGINEERING ASSISTANCE.

THE CIRCUIT IS PROPRIETARY TO LDC TECHNOLOGY AND SHOULD NOT BE REPRODUCED OR COPIED WITHOUT THE WRITTEN PERMISSION OF LDC TECHNOLOGY.

DEMO MANUAL DC2229A

DEMONSTRATION BOARD IMPORTANT NOTICE

Linear Technology Corporation (LTC) provides the enclosed product(s) under the following **AS IS** conditions:

This demonstration board (DEMO BOARD) kit being sold or provided by Linear Technology is intended for use for **ENGINEERING DEVELOPMENT OR EVALUATION PURPOSES ONLY** and is not provided by LTC for commercial use. As such, the DEMO BOARD herein may not be complete in terms of required design-, marketing-, and/or manufacturing-related protective considerations, including but not limited to product safety measures typically found in finished commercial goods. As a prototype, this product does not fall within the scope of the European Union directive on electromagnetic compatibility and therefore may or may not meet the technical requirements of the directive, or other regulations.

If this evaluation kit does not meet the specifications recited in the DEMO BOARD manual the kit may be returned within 30 days from the date of delivery for a full refund. **THE FOREGOING WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY THE SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE. EXCEPT TO THE EXTENT OF THIS INDEMNITY, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.**

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user releases LTC from all claims arising from the handling or use of the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge. Also be aware that the products herein may not be regulatory compliant or agency certified (FCC, UL, CE, etc.).

No License is granted under any patent right or other intellectual property whatsoever. **LTC assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or any other intellectual property rights of any kind.**

LTC currently services a variety of customers for products around the world, and therefore this transaction **is not exclusive**.

Please read the DEMO BOARD manual prior to handling the product. Persons handling this product must have electronics training and observe good laboratory practice standards. **Common sense is encouraged.**

This notice contains important safety information about temperatures and voltages. For further safety concerns, please contact a LTC application engineer.
