### **Features**

The chip ferrite beads BLM series is designed to function nearly as a resistor at noise frequencies, which greatly reduces the possibility of resonance and leaves signal wave forms undistorted. BLM series is effective in circuits without stable ground lines because BLM series does not need a connection to ground. The nickel barrier structure of the external

electrodes provides excellent solder heat resistance. BLM\_B series generates an impedance from the relatively low frequencies.

BLM\_B series is suitable for advanced high-density mounting, and is followed on a miniaturization of digital equipment,

or module of a functional portion.

Because of newly developed ferrite material, BLM15BX has been realized lower DC resistance and larger rated current than BLM15BD series.
