Safety Standard Certified Ceramic Capacitors / High Voltage Ceramic Capacitors

muRata Innovator in Electronics

Murata
Manufacturing Co., Ltd.

Cat.No.C85E-3

⚠Note • Please read rating and ⚠CAUTION (for storage, operating, rating, soldering, mounting and handling) in this catalog to prevent smoking and/or burning, etc.
• This catalog has only typical specifications because there is no space for detailed specifications. Therefore, please review our product specifications or consult the approval sheet for product specifications before ordering.

EU RoHS Compliant

· All the products in this catalog comply with EU RoHS.
· EU RoHS is "the European Directive 2011/65/EU on the Restriction of the Use of Certain Hazardous Substances in Electrical and Electronic Equipment."
· For more details, please refer to our website 'Murata's Approach for EU RoHS' (http://www.murata.com/info/rohs.html).

❶ ❷ ❸ ❹ ❺ ❻ ❼ ❽ ❾

❶Product ID

Product ID	
DE	Safety Standard Certified Ceramic Capacitors/ High Voltage Ceramic Capacitors

❷Series Category

Code	Outline	Contents
1	Safety Standard Certified	IEC60384-14 Class X1, Y1
2		IEC60384-14 Class X1, Y2
J	AC250V (r.m.s.)	-Products based on the Electrical Appliance and Material Safety Law of Japan-

For Electrical Appliance and Material Safety Law of Japan, the first three digits (❶Product ID and ❷Series Category) express "Series Name."
For Safety Certified Capacitors, the first three digits express product code. The fourth figure expresses certified type shown in ❹Safety Standard Certified Type column.

❸Temperature Characteristics

Code	Temperature Characteristics	Cap. Change or Temp. Coeff.	Temperature Range
B3	B	±10%	−25 to +85℃
E3	E	+20%,−55%	
F3	F	+30%,−80%	
1X	SL	+350 to −1000ppm/℃	+20 to +85℃

❹Rated Voltage/Safety Standard Certified Type

Code	Rated Voltage
E2	AC250V
KH	X1, Y2; AC250V, (Safety Standard Certified Type KH)
KY	X1, Y2; AC250V, (Safety Standard Certified Type KY)
KX	X1, Y1; AC250V, (Safety Standard Certified Type KX)

❺Capacitance

Expressed by three figures. The unit is pico-farad (pF). The first and second figures are significant digits, and the third figure expresses the number of zeros that follow the two numbers.

❻Capacitance Tolerance

Code	Capacitance Tolerance
J	±5%
K	±10%
M	±20%
Z	+80%, −20%

❼Lead Style

Code	Lead Style	Dimensions (mm)		
		Lead Spacing	Lead Diameter	Pitch of Components
A2	Vertical Crimp Long	5	ø0.6±0.05	−
A3		7.5		
A4		10		
A5		10	ø0.6+0.1,−0.05	
B2	Vertical Crimp Short	5	ø0.6±0.05	−
B3		7.5		
B4		10		
B5		10	ø0.6+0.1, −0.05	
C3	Straight Long	7.5	ø0.6±0.05	−
D3	Straight Short	7.5	ø0.6±0.05	−
N2	Vertical Crimp Taping	5	ø0.6±0.05	12.7
N3		7.5		15
N4		10		25.4
N5		10	ø0.6+0.1, −0.05	25.4
N7		7.5	ø0.6±0.05	30
P3	Straight Taping	7.5	ø0.6±0.05	15

❽Packaging

Code	Packaging
A	Ammo Pack Taping
B	Bulk

❾Individual Specification Code

For part number that cannot be identified without "Individual Specification," it is added at the end of part number, expressed by three-digit alphanumerics.

High Voltage Ceramic Capacitors (500V-6.3kV)

(Part Number)

DE	B	B3	3A	102	K	N2	A	
❶	❷	❸	❹	❺	❻	❼	❽	❾

❶Product ID

Product ID	
DE	High Voltage Ceramic Capacitors (500V-6.3kV) / Safety Standard Certified Ceramic Capacitors

❷Series Category

Code	Outline	Contents
A	High Voltage	Class 1 (Char. SL) DC1-3.15kV Rated
B		Class 2 DC1-3.15kV Rated
C		Class 1, 2 DC6.3kV Rated
H		High Temperature Guaranteed, Low-dissipation Factor (Char. R, C)
S		High Temperature Guaranteed, Low-dissipation Factor (Char. D)
F		LCD Backlight Inverter Circuit

The first three digits (❶Product ID and ❷Series Category) express "Series Name."

❸Temperature Characteristics

Code	Temperature Characteristics	Cap. Change or Temp. Coeff.	Temperature Range
B3	B	±10%	−25 to +85℃
E3	E	+20%,−55%	
F3	F	+30%,−80%	
C3	C	±20%	−25 to +85℃
		+15%,−30%	+85 to +125℃
R3	R	±15%	−25 to +85℃
		+15%,−30%	+85 to +125℃
D3	D	+20%,−30%	−25 to +125℃
1X	SL	+350 to −1000ppm/℃	+20 to +85℃
2C	CH	0±60ppm/℃	+20 to +85℃

❹Rated Voltage

Code	Rated Voltage
2H	DC500V
3A	DC1kV
3D	DC2kV
3F	DC3.15kV
3J	DC6.3kV
LH	6.3kVp-p

❺Capacitance

Expressed by three figures. The unit is pico-farad (pF). The first and second figures are significant digits, and the third figure expresses the number of zeros that follow the two numbers.

❻Capacitance Tolerance

Code	Capacitance Tolerance
C	±0.25pF
D	±0.5pF
J	±5%
K	±10%
Z	+80%, −20%

❼Lead Style

Code	Lead Style	Dimensions (mm)		
		Lead Spacing	Lead Diameter	Pitch of Components
A2	Vertical Crimp Long	5	ø0.6±0.05	−
A3		7.5		
A4		10		
B2/J2	Vertical Crimp Short	5	ø0.6±0.05	−
B3/J3		7.5		
B4		10		
C1	Straight Long	5	ø0.5±0.05	−
C3		7.5	ø0.6±0.05	
C4		10		
CD		7.5	ø0.5±0.05	
D1	Straight Short	5	ø0.5±0.05	−
D3		7.5	ø0.6±0.05	
DD		7.5	ø0.5±0.05	
N2	Vertical Crimp Taping	5	ø0.6±0.05	12.7
N3		7.5		15
N7		7.5		30
P2	Straight Taping	5	ø0.6±0.05	12.7
P3		7.5		15

❽Packaging

Code	Packaging
A	Ammo Pack Taping
B	Bulk

❾Individual Specification Code

For part number that cannot be identified without "Individual Specification," it is added at the end of part number, expressed by three-digit alphanumerics.

Safety Standard Certified Ceramic Capacitors for Automotive

(Part Number)

DE	6	E3	KJ	102	M	N3	A

N3	Vertical Crimp Taping			15

❽Packaging

Code	Packaging
A	Ammo Pack Taping
B	Bulk

❾Individual Specification Code

For part number that cannot be identified without "Individual Specification," it is added at the end of part number, expressed by three-digit alphanumerics.

Safety Standard Certified Ceramic Capacitors

Type KY (Basic Insulation) -IEC60384-14 Class X1, Y2-

■ Features

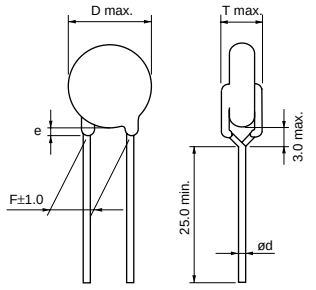
1. Compact size; diameter 25% less than Type KH.
2. Operating temperature range guaranteed up to 125 degrees (UL: 85 deg.).
3. Dielectric strength:
   AC2000V (for lead spacing F=5mm)
   AC2600V (for lead spacing F=7.5mm)
4. Class X1/Y2 capacitors certified by UL/CSA/VDE/BSI/SEMKO/DEMKO/FIMKO/NEMKO/ESTI/NSW.
5. Coated with flame-retardant epoxy resin (conforming to UL94V-0 standard).
   Please contact us when a halogen-free product* is necessary.
   * Cl=900ppm max., Br=900ppm max. and Cl+Br=1500ppm max.
6. Taping available for automatic insertion.

■ Applications

1. Ideal for use as X/Y capacitors for AC line filters and primary-secondary coupling on switching power supplies and AC adapters.
2. Ideal for use on D-A isolation and noise absorption for DAA modems without transformers.

Do not use these products in any automotive power train or safety equipment including battery chargers for electric vehicles and plug-in hybrids. Only Murata products clearly stipulated as "for Automotive use" on its catalog can be used for automobile applications such as power train and safety equipment.

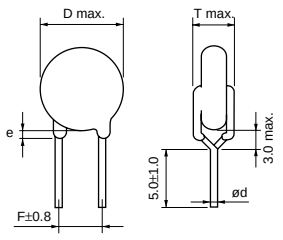
[Bulk]
Vertical Crimp Long (A2, A3)



(in mm)

Lead Code	Coating Extension e	ød
A2, A3	Up to the end of crimp	0.6±0.05

[Bulk]
Vertical Crimp Short (B2, B3)



(in mm)

Lead Code	Coating Extension e	ød
B2, B3	Up to the end of crimp	0.6±0.05

■ Standard Certification

	Standard No.	Certified No.	Rated Voltage
UL	UL1414	E37921	AC250V(r.m.s.)
CSA	CSA E60384-14	1283280	
VDE	IEC 60384-14 EN 60384-14	40006273	
BSI	EN 60065 (8.8, 14.2) IEC 60384-14 EN 60384-14	KM 37901	
SEMKO	IEC 60384-14 EN 60384-14	812168	
DEMKO		314115

Three blank columns are filled with the lead and packaging codes. Please refer to the 3 columns on the right for the appropriate code.
Individual specification code "M01" expresses "simplicity marking and guarantee of dielectric strength between lead wires: AC2000V."
Murata part numbers might be changed depending on lead code or any other changes. Therefore, please specify only the type name (KY) and capacitance of products in the parts list when it is required for applying safety standard of electric equipment.

Safety Standard Certified Ceramic Capacitors

Type KH (Basic Insulation) -IEC60384-14 Class X1, Y2-

■ Features

1. Operating temperature range guaranteed up to 125 degrees (UL: 85 deg.).
2. Dielectric strength: AC2600V
3. Class X1/Y2 capacitors certified by UL/CSA/VDE/BSI/SEMKO/DEMKO/FIMKO/NEMKO/ESTI/NSW.
4. Coated with flame-retardant epoxy resin (conforming to UL94V-0 standard).
   Please contact us when a halogen-free product* is necessary.
   * Cl=900ppm max., Br=900ppm max. and Cl+Br=1500ppm max.
5. Taping available for automatic insertion.

■ Applications

Ideal for use as X/Y capacitors for AC line filters and primary-secondary coupling on switching power supplies and AC adapters.

Do not use these products in any automotive power train or safety equipment including battery chargers for electric vehicles and plug-in hybrids.
Only Murata products clearly stipulated as "for Automotive use" on its catalog can be used for automobile applications such as power train and safety equipment.

Safety Standard Certified Ceramic Capacitors

Type KX Small Size (Reinforced Insulation) -IEC60384-14 Class X1, Y1-

■ Features

1. We design capacitors much more compact in size than current Type KX, having reduced the diameter by 20% max.
2. Operating temperature range guaranteed up to 125 degrees (UL: 85 deg.).
3. Dielectric strength: AC4000V
4. Class X1/Y1 capacitors certified by UL/CSA/VDE/BSI/SEMKO/DEMKO/FIMKO/NEMKO/ESTI/IMQ.
5. Can be use with a component in appliances requiring reinforced insulation and double insulation based on UL1492, IEC60065 and IEC60950.
6. Coated with flame-retardant epoxy resin (conforming to UL94V-0 standard).
   Please contact us when a halogen-free product* is necessary.
   * Cl=900ppm max., Br=900ppm max. and Cl+Br=1500ppm max.
7. Taping available for automatic insertion.

B4	Up to the end of crimp	0.6±0.05

■ Applications

1. Ideal for use as X/Y capacitors for AC line filters and primary-secondary coupling on switching power supplies and AC adapters.
2. Ideal for use on D-A isolation and noise absorption for DAA modems without transformers.

Do not use these products in any automotive power train or safety equipment including battery chargers for electric vehicles and plug-in hybrids. Only Murata products clearly stipulated as "for Automotive use" on its catalog can be used for automobile applications such as power train and safety equipment.

*: Small sized Type KX differs from current Type KX in electrical characteristics, such as the voltage dependency, capacitance temperature dependency, and Dielectric strength.
Therefore, before replacing current Type KX, please make a performance check by equipment.
Please also refer to Notice (Rating) item 2, "Performance Check by Equipment," below.

Three blank columns are filled with the lead and packaging codes. Please refer to the 3 columns on the right for the appropriate code.
Murata part numbers might be changed depending on lead code or any other changes. Therefore, please specify only the type name (KX) and capacitance of products in the parts list when it is required for applying safety standard of electric equipment.

Safety Standard Certified Ceramic Capacitors

Type KX (Reinforced Insulation) -IEC60384-14 Class X1, Y1-

■ Features

1. Operating temperature range guaranteed up to 125 degrees (UL: 85 deg.).
2. Dielectric strength: AC4000V
3. Class X1/Y1 capacitors certified by UL/CSA/VDE/BSI/SEMKO/DEMKO/FIMKO/NEMKO/ESTI/IMQ.
4. Can be use with a component in appliances requiring reinforced insulation and double insulation based on UL1492, IEC60065 and IEC60950.
5. Coated with flame-retardant epoxy resin (conforming to UL94V-0 standard).
   Please contact us when a halogen-free product* is necessary.
   * Cl=900ppm max., Br=900ppm max. and Cl+Br=1500ppm max.
6. Taping available for automatic insertion.

■ Applications

Ideal for use as X/Y capacitors for AC line filters and primary-secondary coupling on switching power supplies and AC adapters.

Do not use these products in any automotive power train or safety equipment including battery chargers for electric vehicles and plug-in hybrids. Only Murata products clearly stipulated as "for Automotive use" on its catalog can be used for automobile applications such as power train and safety equipment.

Safety Standard Certified Ceramic Capacitors

DEJ Series Based on the Electrical Appliance and Material Safety Law of Japan

■ Features

1. This type is based on the electrical appliance and material safety law of Japan (separated table 4).
2. Coated with flame-retardant epoxy resin (conforming to UL94V-0 standard).
   Please contact us when a halogen-free product* is necessary.
   * Cl=900ppm max., Br=900ppm max. and Cl+Br=1500ppm max.
3. Taping available for automatic insertion.

■ Applications

Ideal for use on AC line filters and primary-secondary coupling for switching power supplies and AC adapters.

Do not use these products in any automotive power train or safety equipment including battery chargers for electric vehicles and plug-in hybrids. Only Murata products clearly stipulated as "for Automotive use" on its catalog can be used for automobile applications such as power train and safety equipment.

Taping (1): Lead spacing F=5.0mm, Taping (2): Lead spacing F=7.5mm.

DEJ Series Specifications and Test Methods

Operating Temperature Range: -25 to +85°C

No.	Item		Specifications	Test Method
1	Appearance and Dimensions		No visible defect, and dimensions are within specified range.	The capacitor should be visually inspected for evidence of defect. Dimensions should be measured with slide calipers.
2	Marking		To be easily legible	The capacitor should be visually inspected.
3	Capacitance		Within specified tolerance	The capacitance should be measured at 20˚C with 1±0.1kHz and AC5V(r.m.s.) max.
4	Dissipation Factor (D.F.)		Char. E: D.F.≦2.5% Char. F: D.F.≦5.0%	The dissipation factor should be measured at 20˚C with 1±0.1kHz and AC5V(r.m.s.) max.
5	Insulation Resistance (I.R.)		10000MΩ min.	The insulation resistance should be measured with DC500±50V within 60±5 sec. of charging.
6	Dielectric Strength	Between Lead Wires	No failure	The capacitor should not be damaged when AC1500V(r.m.s.) are applied between the lead wires for 60 sec.
		Body Insulation	No failure	First, the terminals of the capacitor should be connected together. Then, as shown in the figure at right, the capacitor should be immersed into 10% salt solution up to a position of about 3 to 4mm apart from the terminals. Finally, AC1500V(r.m.s.) is applied for 60 sec. between the capacitor lead wires and electrode plate. 7	Temperature Characteristics		Char. E: Within $^{+20}_{-55}$% Char. F: Within $^{+30}_{-80}$%	The capacitance measurement should be made at each step specified in Table 1. <Table 1> Step 1: 20±2 (ºC) Step 2: -25±2 Step 3: 20±2 Step 4: 85±2 Step 5: 20±2
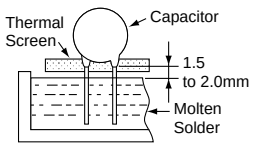
8	Discharge Test	Appearance	No marked defect	As in Figure 1, discharge is made 50 times at 5 sec. intervals from the capacitor (Cd) charged at DC voltage of specified.  Fig.1 Ct: Capacitor under test S: High-voltage switch R1: 1000Ω R2: 100MΩ R3: Surge resistance Cd: 0.001µF Vs: DC10kV
		I.R.	1000MΩ min.	
		Dielectric Strength	Per Item 6	
9	Solderability of Leads		Lead wire should be soldered with uniform coating on the axial direction over 3/4 of the circumferential direction.	The lead wire of a capacitor should be dipped into molten solder for 2±0.5 sec. The depth of immersion is up to about 1.5 to 2.0mm from the root of lead wires. Temp. of solder: Lead Free Solder (Sn-3Ag-0.5Cu) 245±5°C H63 Eutectic Solder 235±5°C

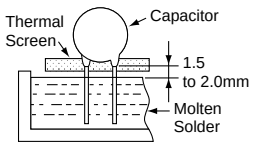
Continued on the following page.

DEJ Series Specifications and Test Methods

Continued from the preceding page.

No.	Item		Specifications	Test Method
10	Soldering Effect (Non-Preheat)	Appearance	No marked defect	As shown in the figure, the lead wires should be immersed in solder of 350±10˚C up to 1.5 to 2.0mm from the root of terminal for 3.5±0.5 sec. Pre-treatment: Capacitor should be stored at 85±2˚C for 1 hr., then placed at room condition*1 for 24±2 hrs. before initial measurements. Post-treatment: Capacitor should be stored for 4 to 24 hrs. at room condition.*1
		I.R.	1000MΩ min.	
		Dielectric Strength	Per Item 6	
11	Soldering Effect (On-Preheat)	Appearance	No marked defect	First the capacitor should be stored at 120+0/-5°C for 60+0/-5 sec. Then, as in the figure, the lead wires should be immersed in solder of 260+0/-5°C up to 1.5 to 2.0mm from the root of terminal for 7.5+0/-1 sec. Pre-treatment: Capacitor should be stored at 85±2˚C for 1 hr., then placed at room condition*1 for 24±2 hrs. before initial measurements. Post-treatment: Capacitor should be stored for 4 to 24 hrs. at room condition.*1
		I.R.	1000MΩ min.	
		Dielectric Strength	Per Item 6	
12	Vibration Resistance	Appearance	No marked defect	The capacitor should be firmly soldered to the supporting lead wire and vibrated at a frequency range of 10 to 55Hz, 1.5mm in total amplitude, with about a 1-minute rate of vibration change from 10Hz to 55Hz and back to 10Hz. Apply for a total of 6 hrs., 2 hrs. each in 3 mutually perpendicular directions.
		Capacitance	Within the specified tolerance	
		D.F.	Char. / Specifications: E: D.F.≦2.5%; F: D.F.≦5.0%	
13	Solvent Resistance	Appearance	No marked defect	The capacitor should be immersed into a isopropyl alcohol for 30±5 sec.
14	Humidity (Under Steady State)	Appearance	No marked defect	Set the capacitor for 500±12 hrs. at 40±2˚C in 90 to 95% relative humidity. Pre-treatment: Capacitor should be stored at 85±2˚C for 1 hr., then placed at room condition*1 for 24±2 hrs. before initial measurements. Post-treatment: Capacitor should be stored for 1 to 2 hrs. at room condition.*1
		Capacitance Change	Char. / Capacitance Change: E: Within ±20%; F: Within ±30%	
		D.F.	Char. / Specifications: E: D.F.≦5.0%; F: D.F.≦7.5%	
		I.R.	1000MΩ min.	
		Dielectric Strength	Per Item 6	
15	Humidity Insulation	Appearance	No marked defect	The capacitor should be subjected to 40±2˚C, relative humidity of 90 to 98% for 8 hrs., and then removed in room temperature for 16 hrs. until 5 cycles are completed. Pre-treatment: Capacitor should be stored at 85±2˚C for 1 hr., then placed at room condition*1 for 24±2 hrs. before initial measurements. Post-treatment: Capacitor should be stored for 1 to 2 hrs. at room condition.*1
		Capacitance Change	Char. / Capacitance Change: E: Within ±20%; F: Within ±30%	
		D.F.	Char. / Specifications: E: D.F.≦5.0%; F: D.F.≦7.5%	
		I.R.	1000MΩ min.	
		Dielectric Strength	Per Item 6	





*1 "Room condition" Temperature: 15 to 35°C, Relative humidity: 45 to 75%, Atmospheric pressure: 86 to 106kPa

Safety Certified Ceramic Capacitors ⚠Caution

■ ⚠Caution (Rating)

1. Operating Voltage

When DC-rated capacitors are to be used in AC or ripple current circuits, be sure to maintain the Vp-p value of the applied voltage or the Vo-p that contains DC bias within the rated voltage range.

When the voltage is applied to the circuit, starting or stopping may generate irregular voltage for a transit period because of resonance or switching. Be sure to use a capacitor with a rated voltage range that includes these irregular voltages.

Voltage	DC Voltage	DC+AC Voltage	AC Voltage	Pulse Voltage (1)	Pulse Voltage (2)
Positional Measurement					
2. Operating Temperature and Self-generated Heat (Apply to B/E/F Char.)

Keep the surface temperature of a capacitor below the upper limit of its rated operating temperature range. Be sure to take into account the heat generated by the capacitor itself. When the capacitor is used in a high-frequency current, pulse current or similar current, it may have self-generated heat due to dielectric loss. Applied voltage load should be such that self-generated heat is within 20°C under the condition where the capacitor is subjected to an atmospheric temperature of 25°C. When measuring, use a thermocouple of small thermal capacity-K of ø0.1mm under conditions where the capacitor is not affected by radiant heat from other components or wind from surroundings. Excessive heat may lead to deterioration of the capacitor's characteristics and reliability. (Never attempt to perform measurement with the cooling fan running. Otherwise, accurate measurement cannot be ensured.)

3. Test Condition for Withstanding Voltage

(1) Test Equipment

Test equipment for AC withstanding voltage should be used with the performance of the wave similar to 50/60Hz sine wave.

If the distorted sine wave or overload exceeding the specified voltage value is applied, a defect may be caused.

Continued on the following page.

Safety Certified Ceramic Capacitors ⚠Caution

Continued from the preceding page.

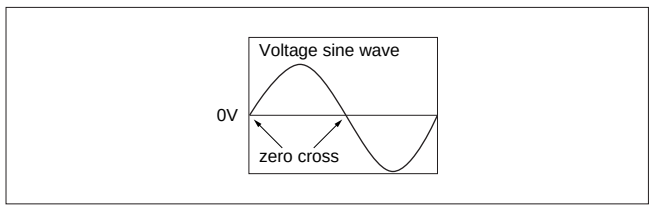
(2) Voltage Applied Method

When the withstanding voltage is applied, the capacitor's lead or terminal should be firmly connected to the output of the withstanding voltage test equipment, and then the voltage should be raised from near zero to the test voltage.

If the test voltage without the raise from near zero voltage would be applied directly to capacitor, test voltage should be applied with the zero cross.* At the end of the test time, the test voltage should be reduced to near zero, and then capacitor's lead or terminal should be taken off the output of the withstanding voltage test equipment.

If the test voltage without the raise from near zero voltage would be applied directly to capacitor, the surge voltage may rise, and therefore, a defect may be caused.

*ZERO CROSS is the point where voltage sine wave passes 0V. See the figure at right.



4. Fail-Safe

When the capacitor is broken, failure may result in a short circuit. Be sure to provide an appropriate fail-safe function like a fuse on your product if failure could result in an electric shock, fire or fuming.

FAILURE TO FOLLOW THE ABOVE CAUTIONS MAY RESULT, WORST CASE, IN A SHORT CIRCUIT AND CAUSE FUMING OR PARTIAL DISPERSION WHEN THE PRODUCT IS USED.

Safety Certified Ceramic Capacitors ⚠Caution

■ ⚠Caution (Storage and Operating Condition)

Operating and Storage Environment

The insulating coating of capacitors does not form a perfect seal; therefore, do not use or store capacitors in a corrosive atmosphere, especially where chloride gas, sulfide gas, acid, alkali, salt or the like are present. Also, avoid exposure to moisture. Before cleaning, bonding, or molding this product, verify that these processes do not affect product quality by testing the performance of a cleaned, bonded or molded product in the intended equipment. Store the capacitors where the temperature and relative humidity do not exceed -10 to 40 degrees centigrade and 15 to 85%.

Use capacitors within 6 months after delivery.
Check the solderability after 6 months or more.

FAILURE TO FOLLOW THE ABOVE CAUTIONS MAY RESULT, WORST CASE, IN A SHORT CIRCUIT AND CAUSE FUMING OR PARTIAL DISPERSION WHEN THE PRODUCT IS USED.

■ ⚠Caution (Soldering and Mounting)

1. Vibration and Impact
   Do not expose a capacitor or its lead wires to excessive shock or vibration during use.
   Excessive shock or vibration may cause fatigue destruction of lead wires mounted on the circuit board.
   Please take measures to hold a capacitor on the circuit boards by adhesive, molding resin or another coating.
   Please confirm there is no influence of holding measures on the product with the intended equipment.
2. Soldering
   When soldering this product to a PCB/PWB, do not exceed the solder heat resistance specifications of the capacitor. Subjecting this product to excessive heating could melt the internal junction solder and may result in thermal shocks that can crack the ceramic element.
   Soldering the capacitor with a soldering iron should be performed in the following conditions.
   Temperature of iron-tip: 400 degrees C. max.
   Soldering iron wattage: 50W max.
   Soldering time: 3.5 sec. max.
3. Bonding, Resin Molding and Coating
   For bonding, molding or coating this product, verify that these processes do not affect the quality of the capacitor by testing the performance of the bonded, molded or coated product in the intended equipment. When the amount of applications, dryness/hardening conditions of adhesives and molding resins containing organic solvents (ethyl acetate, methyl ethyl ketone, toluene, etc). are unsuitable, the outer coating resin of a capacitor is damaged by the organic solvents and it may result, worst case, in a short circuit.
   The variation in thickness of adhesive, molding resin or coating may cause outer coating resin cracking and/or ceramic element cracking of a capacitor in a temperature cycling.
4. Treatment after Bonding, Resin Molding and Coating
   When the outer coating is hot (over 100 degrees C.) after soldering, it becomes soft and fragile.
   Therefore, please be careful not to give it mechanical stress.

FAILURE TO FOLLOW THE ABOVE CAUTIONS MAY RESULT, WORST CASE, IN A SHORT CIRCUIT AND CAUSE FUMING OR PARTIAL DISPERSION WHEN THE PRODUCT IS USED.

■ ⚠Caution (Handling)

Vibration and Impact

Do not expose a capacitor or its lead wires to excessive shock or vibration during use.
Excessive shock or vibration may cause fatigue destruction of lead wires mounted on the circuit board.
Please take measures to hold a capacitor on the circuit boards by adhesive, molding resin or another coating.

Please confirm there is no influence of holding measures on the product with the intended equipment.

FAILURE TO FOLLOW THE ABOVE CAUTIONS MAY RESULT, WORST CASE, IN A SHORT CIRCUIT AND CAUSE FUMING OR PARTIAL DISPERSION WHEN THE PRODUCT IS USED.

Safety Certified Ceramic Capacitors Notice

■ Notice (Soldering and Mounting)

Cleaning (ultrasonic cleaning)

To perform ultrasonic cleaning, observe the following conditions.
Rinse bath capacity: Output of 20 watts per liter or less.
Rinsing time: 5 min. maximum.
Do not vibrate the PCB/PWB directly.
Excessive ultrasonic cleaning may lead to fatigue destruction of the lead wires.

■ Notice (Rating)

1. Capacitance Change of Capacitors

(1) For SL char.
Capacitance might change a little depending on a surrounding temperature or an applied voltage. Please contact us if you use a strict constant time circuit.

(2) For B/E/F char.
Capacitors have an aging characteristic, whereby the capacitor continually decreases its capacitance slightly if the capacitor is left on for a long time. Moreover, capacitance might change greatly depending on the surrounding temperature or an applied voltage. Therefore, it is not likely to be suitable for use in a constant time circuit.
Please contact us if you need detailed information.

2. Performance Check by Equipment

Before using a capacitor, check that there is no problem in the equipment's performance and the specifications.
Generally speaking, CLASS 2 (B/E/F char.) ceramic capacitors have voltage dependence characteristics and temperature dependence characteristics in capacitance, so the capacitance value may change depending on the operating condition in the equipment. Therefore, be sure to confirm the apparatus performance of receiving influence in the capacitance value change of a capacitor, such as leakage current and noise suppression characteristic.
Moreover, check the surge-proof ability of a capacitor in the equipment, if needed, because the surge voltage may exceed specific value by the inductance of the circuit.

High Voltage Ceramic Capacitors

DES Series (125°C Guaranteed/Low-dissipation Factor/DC500V-1kV)

■ Features

1. Low dissipation factor series that can be used for power supplies with an increased switching frequency.
2. The allowable power in the 100 to 300kHz band is improved to approximately one and a half times that of the DEH series while remaining the same size.
3. Operating temperature range is guaranteed up to 125 degrees C.
4. Coated with flame-retardant epoxy resin (equivalent to UL94V-0 standard).
   Please contact us when a halogen-free product* is necessary.
   * Cl=900ppm max., Br=900ppm max. and Cl+Br=1500ppm max.
5. Taping available for automatic insertion.

■ Applications

Ideal for use on high-frequency pulse circuits such as snubber circuits for switching power supplies.

Do not use these products in any automotive power train or safety equipment including battery chargers for electric vehicles and plug-in hybrids. Only Murata products clearly stipulated as "for Automotive use" on its catalog can be used for automobile applications such as power train and safety equipment.

DES Series Specifications and Test Methods

No.	Item		Specifications	Test Method
1	Operating Temperature Range		-25 to +125°C	
2	Appearance and Dimensions		No visible defect, and dimensions are within specified range.	The capacitor should be visually inspected for evidence of defect. Dimensions should be measured with slide calipers.
3	Marking		To be easily legible	The capacitor should be visually inspected.
4	Dielectric Strength	Between Lead Wires	No failure	The capacitor should not be damaged when DC voltage of 200% of the rated voltage (DC1kV) or DC voltage of 250% of the rated voltage (DC500V) is applied between the lead wires for 1 to 5 sec. (Charge/Discharge current≦50mA)
		Body Insulation	No failure	The capacitor is placed in the container with metal balls of diameter 1mm so that each lead wire, short circuited, is kept about 2mm off the metal balls as shown in the figure at right, and AC1250V(r.m.s.) <50/60Hz> is applied for 1 to 5 sec. between capacitor lead wires and metal balls. (Charge/Discharge current≦50mA) 5	Insulation Resistance (I.R.)	Between Lead Wires	10000MΩ min.	The insulation resistance should be measured with DC500±50V within 60±5 sec. of charging.
6	Capacitance		Within specified tolerance	The capacitance should be measured at 20°C with 1±0.2kHz and AC5V(r.m.s.) max.
7	Dissipation Factor (D.F.)		0.3% max.	The dissipation factor should be measured at 20°C with 1±0.2kHz and AC5V(r.m.s.) max.
8	Temperature Characteristics		Within +20/-30% (Temp. range: -25 to +125°C)	The capacitance measurement should be made at each step specified in the Table.
			Pre-treatment: Capacitor should be stored at 125±3°C for 1 hr., then placed at room condition* for 24±2 hrs. before measurements.	

Step	1	2	3	4	5
Temp. (°C)	20±2	-25±3	20±2	125±2	20±2

9	Strength of Lead	Pull	Lead wire should not be cut off. Capacitor should not be broken.	As shown in the figure at right, fix the body of the capacitor and apply a tensile weight gradually to each lead wire in the radial direction of the capacitor up to 10N and keep it for 10±1 sec. 		Bending		Each lead wire should be subjected to 5N of weight and bent 90° at the point of egress, in one direction, then returned to its original position and bent 90° in the opposite direction at the rate of one bend in 2 to 3 sec.
10	Vibration Resistance	Appearance	No marked defect	The capacitor should be firmly soldered to the supporting lead wire and vibrated at a frequency range of 10 to 55Hz, 1.5mm in total amplitude, with about a 1-minute rate of vibration change from 10Hz to 55Hz and back to 10Hz. Apply for a total of 6 hrs., 2 hrs. each in 3 mutually perpendicular directions.
		Capacitance	Within specified tolerance	
		D.F.	0.3% max.	
11	Solderability of Leads		Lead wire should be soldered with uniform coating on the axial direction over 3/4 of the circumferential direction.	The lead wire of a capacitor should be dipped into a ethanol solution of 25wt% rosin and then into molten solder for 2±0.5 sec. In both cases the depth of dipping is up to about 1.5 to 2mm from the root of lead wires. Temp. of solder: Lead Free Solder (Sn-3Ag-0.5Cu) 245±5°C H63 Eutectic Solder 235±5°C
12	Soldering Effect (Non-Preheat)	Appearance	No marked defect	The lead wire should be immersed into the melted solder of 350±10°C up to about 1.5 to 2mm from the main body for 3.5±0.5 sec. Pre-treatment: Capacitor should be stored at 125±3°C for 1 hr., then placed at room condition* for 24±2 hrs. before initial measurements. Post-treatment: Capacitor should be stored for 24±2 hrs. at room condition.*
		Capacitance Change	Within ±10%	
		Dielectric Strength (Between Lead Wires)	Per item 4.	

* "Room condition" Temperature: 15 to 35°C, Relative humidity: 45 to 75%, Atmospheric pressure: 86 to 106kPa

DES Series Specifications and Test Methods

Continued from the preceding page.

No.	Item		Specifications	Test Method
13	Soldering Effect (On-Preheat)	Appearance	No marked defect	First the capacitor should be stored at 120+0/-5°C for 60+0/-5 sec. Then, as in the figure, the lead wires should be immersed in solder of 260+0/-5°C up to 1.5 to 2.0mm from the root of terminal for 7.5+0/-1 sec.  Pre-treatment: Capacitor should be stored at 125±3°C for 1 hr., then placed at room condition* for 24±2 hrs. before initial measurements. Post-treatment: Capacitor should be stored for 24±2 hrs. at room condition.*
		Capacitance Change	Within ±10%	
		Dielectric Strength (Between Lead Wires)	Per item 4.	
14	Temperature Cycle	Appearance	No marked defect	The capacitor should be subjected to 5 temperature cycles. <Temperature Cycle> Step / Temperature (°C) / Time (min): 1 / -25±3 / 30; 2 / Room Temp. / 3; 3 / 125±3 / 30; 4 / Room Temp. / 3 Cycle time: 5 cycles Pre-treatment: Capacitor should be stored at 125±3°C for 1 hr., then placed at room condition* for 24±2 hrs. before initial measurements. Post-treatment: Capacitor should be stored for 24±2 hrs. at room condition.*
		Capacitance Change	Within ±10%	
		D.F.	0.4% max.	
		I.R.	1000MΩ min.	
		Dielectric Strength (Between Lead Wires)	Per item 4.	
15	Humidity (Under Steady State)	Appearance	No marked defect	Set the capacitor for 500+24/-0 hrs. at 40±2°C in 90 to 95% relative humidity. Pre-treatment: Capacitor should be stored at 125±3°C for 1 hr., then placed at room condition* for 24±2 hrs. before initial measurements. Post-treatment: Capacitor should be stored for 1 to 2 hrs. at room condition.*
		Capacitance Change	Within ±10%	
		D.F.	0.4% max.	
		I.R.	1000MΩ min.	
16	Humidity Loading	Appearance	No marked defect	Apply the rated voltage for 500+24/-0 hrs. at 40±2°C in 90 to 95% relative humidity. (Charge/Discharge current≦50mA) Pre-treatment: Capacitor should be stored at 125±3°C for 1 hr., then placed at room condition* for 24±2 hrs. before initial measurements. Post-treatment: Capacitor should be stored for 1 to 2 hrs. at room condition.*
		Capacitance Change	Within ±10%	
		D.F.	0.6% max.	
		I.R.	1000MΩ min.	
17	Life	Appearance	No marked defect	Apply a DC voltage of 200% of the rated voltage (DC500V) or DC voltage of 150% of the rated voltage (DC1kV) for 1000 +48/-0 hrs. at 125±2°C with a relative humidity of 50% max. (Charge/Discharge current≦50mA) Pre-treatment: Capacitor should be stored at 125±3°C for 1 hr., then placed at room condition* for 24±2 hrs. before initial measurements. Post-treatment: Capacitor should be stored at 125±3°C for 1 hr., then placed at room condition* for 24±2 hrs.
		Capacitance Change	Within ±10%	
		D.F.	0.4% max.	
		I.R.	2000MΩ min.	

* "Room condition" Temperature: 15 to 35°C, Relative humidity: 45 to 75%, Atmospheric pressure: 86 to 106kPa

High Voltage Ceramic Capacitors

DEH Series (125°C Guaranteed/Low-dissipation Factor/DC500V-3.15kV)

■ Features

1. Reduced heat dissipation permitted due to small dielectric loss of the ceramic material.
2. Operating temperature range is guaranteed up to 125 degrees C.
3. Coated with flame-retardant epoxy resin (equivalent to UL94V-0 standard).
   Please contact us when a halogen-free product* is necessary.
   * Cl=900ppm max., Br=900ppm max. and Cl+Br=1500ppm max.
4. Taping available for automatic insertion.

■ Applications

Ideal for use on high-frequency pulse circuits such as a horizontal resonance circuit for CTV and snubber circuits for switching power supplies.

Do not use these products in any automotive power train or safety equipment including battery chargers for electric vehicles and plug-in hybrids. Only Murata products clearly stipulated as "for Automotive use" on its catalog can be used for automobile applications such as power train and safety equipment.

DEH Series Specifications and Test Methods

Continued from the preceding page.

No.	Item		Specifications	Test Method
13	Soldering Effect (On-Preheat)	Appearance	No marked defect	First the capacitor should be stored at 120+0/-5°C for 60+0/-5 sec. Then, as in the figure, the lead wires should be immersed in solder of 260+0/-5°C up to 1.5 to 2.0mm from the root of terminal for 7.5+0/-1 sec.  Pre-treatment: Capacitor should be stored at 125±3°C for 1 hr., then placed at room condition* for 24±2 hrs. before initial measurements. Post-treatment: Capacitor should be stored for 24±2 hrs. at room condition.*
		Capacitance Change	Within ±10%	
		Dielectric Strength (Between Lead Wires)	Per item 4.	
14	Temperature Cycle	Appearance	No marked defect	The capacitor should be subjected to 5 temperature cycles. <Temperature Cycle> Step / Temperature (°C) / Time (min) 1 / -25±3 / 30 2 / Room Temp. / 3 3 / 125±3 / 30 4 / Room Temp. / 3 Cycle time: 5 cycles Pre-treatment: Capacitor should be stored at 125±3°C for 1 hr., then placed at room condition* for 24±2 hrs. before initial measurements. Post-treatment: Capacitor should be stored for 24±2 hrs. at room condition.*
		Capacitance Change	Within ±10%	
		D.F.	0.4% max.	
		I.R.	1000MΩ min.	
		Dielectric Strength (Between Lead Wires)	Per item 4.	
15	Humidity (Under Steady State)	Appearance	No marked defect	Set the capacitor for 500 +24/-0 hrs. at 40±2°C in 90 to 95% relative humidity. Pre-treatment: Capacitor should be stored at 125±3°C for 1 hr., then placed at room condition* for 24±2 hrs. before initial measurements. Post-treatment: Capacitor should be stored for 1 to 2 hrs. at room condition.*
		Capacitance Change	Within ±10%	
		D.F.	0.4% max.	
		I.R.	1000MΩ min.	
16	Humidity Loading	Appearance	No marked defect	Apply the rated voltage for 500+24/-0 hrs. at 40±2°C in 90 to 95% relative humidity. (Charge/Discharge current≦50mA) Pre-treatment: Capacitor should be stored at 125±3°C for 1 hr., then placed at room condition* for 24±2 hrs. before initial measurements. Post-treatment: Capacitor should be stored for 1 to 2 hrs. at room condition.*
		Capacitance Change	Within ±10%	
		D.F.	0.6% max.	
		I.R.	1000MΩ min.	
17	Life	Appearance	No marked defect	Apply a DC voltage of 200% of the rated voltage (DC500V) or DC voltage of 150% of the rated voltage (DC1 to 3.15kV) for 1000 +48/-0 hrs. at 125±2°C with a relative humidity of 50% max. (Charge/Discharge current≦50mA) Pre-treatment: Capacitor should be stored at 125±3°C for 1 hr., then placed at room condition* for 24±2 hrs. before initial measurements. Post-treatment: Capacitor should be stored at 125±3°C for 1 hr., then placed at room condition* for 24±2 hrs.
		Capacitance Change	Within ±10%	
		D.F.	0.4% max.	
		I.R.	2000MΩ min.	

* "Room condition" Temperature: 15 to 35°C, Relative humidity: 45 to 75%, Atmospheric pressure: 86 to 106kPa

High Voltage Ceramic Capacitors

DEA Series (125°C Guaranteed/Class 1/DC1k-3.15kV)

■ Features

1. Temperature compensating type ceramics realize lower heat dissipation than DEH/DES series.
2. Operating temperature range is guaranteed up to 125 degrees C.
3. Coated with flame-retardant epoxy resin (equivalent to UL94V-0 standard).
   Please contact us when a halogen-free product* is necessary.
   * Cl=900ppm max., Br=900ppm max. and Cl+Br=1500ppm max.
4. Taping available for automatic insertion.

■ Applications

1. Ideal for use as the ballast in backlighting inverters for liquid crystal display.
2. Ideal for use on high-frequency pulse circuits such as a horizontal resonance circuit for CTV and snubber circuits for switching power supplies.

Do not use these products in any automotive power train or safety equipment including battery chargers for electric vehicles and plug-in hybrids.
Only Murata products clearly stipulated as "for Automotive use" on its catalog can be used for automobile applications such as power train and safety equipment.

Three blank columns are filled with the lead and packaging codes. Please refer to the three columns on the right for the appropriate code.

DEA Series Specifications and Test Methods

No.	Item		Specifications	Test Method
1	Operating Temperature Range		-25 to +125°C	
2	Appearance and Dimensions		No visible defect, and dimensions are within specified range.	The capacitor should be visually inspected for evidence of defect. Dimensions should be measured with slide calipers.
3	Marking		To be easily legible	The capacitor should be visually inspected.
4	Dielectric Strength	Between Lead Wires	No failure	The capacitor should not be damaged when DC voltage of 200% of the rated voltage is applied between the lead wires for 1 to 5 sec. (Charge/Discharge current≦50mA)
		Body Insulation	No failure	The capacitor is placed in the container with metal balls of diameter 1mm so that each lead wire, short circuited, is kept about 2mm off the metal balls as shown in the figure at right, and AC1250V(r.m.s.) <50/60Hz> is applied for 1 to 5 sec. between capacitor lead wires and metal balls. (Charge/Discharge current≦50mA) 5	Insulation Resistance (I.R.)	Between Lead Wires	10000MΩ min.	The insulation resistance should be measured with DC500±50V within 60±5 sec. of charging.
6	Capacitance		Within specified tolerance	The capacitance should be measured at 20°C with 1±0.2MHz and AC5V(r.m.s.) max.
7	Q		400+20C*2min. (30pF under) 1000 min. (30pF min.)	The Q should be measured at 20°C with 1±0.2MHz and AC5V(r.m.s.) max.
8	Temperature Characteristics		+350 to -1000ppm/°C (Temp. range: +20 to +85°C)	The capacitance measurement should be made at each step specified in the Table.

Step	1	2	3	4	5
Temp. (°C)	20±2	-25±3	20±2	85±2	20±2

9	Strength of Lead	Pull	Lead wire should not be cut off. Capacitor should not be broken.	As shown in the figure at right, fix the body of the capacitor and apply a tensile weight gradually to each lead wire in the radial direction of the capacitor up to 10N (5N for lead diameter 0.5mm), and keep it for 10±1 sec. 		Bending		Each lead wire should be subjected to 5N (2.5N for lead diameter 0.5mm) of weight and bent 90° at the point of egress, in one direction, then returned to its original position and bent 90° in the opposite direction at the rate of one bend in 2 to 3 sec.
10	Vibration Resistance	Appearance	No marked defect	The capacitor should be firmly soldered to the supporting lead wire and vibrated at a frequency range of 10 to 55Hz, 1.5mm in total amplitude, with about a 1-minute rate of vibration change from 10Hz to 55Hz and back to 10Hz. Apply for a total of 6 hrs., 2 hrs. each in 3 mutually perpendicular directions.
		Capacitance	Within specified tolerance	
		Q	400+20C*2min. (30pF under) 1000 min. (30pF min.)	
11	Solderability of Leads		Lead wire should be soldered with uniform coating on the axial direction over 3/4 of the circumferential direction.	The lead wire of a capacitor should be dipped into a ethanol solution of 25wt% rosin and then into molten solder for 2±0.5 sec. In both cases the depth of dipping is up to about 1.5 to 2mm from the root of lead wires. Temp. of solder: Lead Free Solder (Sn-3Ag-0.5Cu) 245±5°C H63 Eutectic Solder 235±5°C
12	Soldering Effect (Non-Preheat)	Appearance	No marked defect	The lead wire should be immersed into the melted solder of 350±10°C (Body of ø5mm and under: 270±5°C) up to about 1.5 to 2mm from the main body for 3.5±0.5 sec. (Body of ø5mm and under: 5±0.5 sec.) Post-treatment: Capacitor should be stored for 1 to 2 hrs. at room condition.*1
		Capacitance Change	Within ±2.5%	
		Dielectric Strength (Between Lead Wires)	Per item 4.	

*1 "Room condition" Temperature: 15 to 35°C, Relative humidity: 45 to 75%, Atmospheric pressure: 86 to 106kPa
*2 "C" expresses nominal capacitance value (pF).

High Voltage Ceramic Capacitors

DEB Series (Class 2/DC1k-3.15kV)

■ Features

1. Small size and high capacitance
2. Coated with flame-retardant epoxy resin (equivalent to UL94V-0 standard).
   Please contact us when a halogen-free product* is necessary.
   * Cl=900ppm max., Br=900ppm max. and Cl+Br=1500ppm max.
3. Taping available for automatic insertion.

■ Applications

Ideal for use on decoupling circuits for power supplies.

Do not use these products in any automotive power train or safety equipment including battery chargers for electric vehicles and plug-in hybrids. Only Murata products clearly stipulated as "for Automotive use" on its catalog can be used for automobile applications such as power train and safety equipment.

DEB Series Specifications and Test Methods

No.	Item		Specifications	Test Method
1	Operating Temperature Range		-25 to +85°C	
2	Appearance and Dimensions		No visible defect, and dimensions are within specified range.	The capacitor should be visually inspected for evidence of defect. Dimensions should be measured with slide calipers.
3	Marking		To be easily legible	The capacitor should be visually inspected.
4	Dielectric Strength	Between Lead Wires	No failure	The capacitor should not be damaged when DC voltage of 200% of the rated voltage is applied between the lead wires for 1 to 5 sec. (Charge/Discharge current≦50mA)
		Body Insulation	No failure	The capacitor is placed in the container with metal balls of diameter 1mm so that each lead wire, short circuited, is kept about 2mm off the metal balls as shown in the figure at right, and DC voltage of 1.3kV is applied for 1 to 5 sec. between capacitor lead wires and metal balls. (Charge/Discharge current≦50mA) 5	Insulation Resistance (I.R.)	Between Lead Wires	10000MΩ min.	The insulation resistance should be measured with DC500±50V within 60±5 sec. of charging.
6	Capacitance		Within specified tolerance	The capacitance should be measured at 20°C with 1±0.2kHz and AC5V(r.m.s.) max.
7	Dissipation Factor (D.F.)		Char. B, E: 2.5% max. Char. F: 5.0% max.	The dissipation factor should be measured at 20°C with 1±0.2kHz and AC5V(r.m.s.) max.
8	Temperature Characteristics		Char. B: Within ±10% Char. E: Within +20/-55% Char. F: Within +30/-80%	The capacitance measurement should be made at each step specified in the Table.
			Pre-treatment: Capacitor should be stored at 85±2°C for 1 hr., then placed at room condition* for 24±2 hrs. before measurements.	
9	Strength of Lead	Pull	Lead wire should not be cut off. Capacitor should not be broken.	As shown in the figure at right, fix the body of the capacitor and apply a tensile weight gradually to each lead wire in the radial direction of the capacitor up to 10N (5N for lead diameter 0.5mm), and keep it for 10±1 sec. 		Bending		Each lead wire should be subjected to 5N (2.5N for lead diameter 0.5mm) of weight and bent 90° at the point of egress, in one direction, then returned to its original position and bent 90° in the opposite direction at the rate of one bend in 2 to 3 sec.
10	Vibration Resistance	Appearance	No marked defect	The capacitor should be firmly soldered to the supporting lead wire and vibrated at a frequency range of 10 to 55Hz, 1.5mm in total amplitude, with about a 1-minute rate of vibration change from 10Hz to 55Hz and back to 10Hz. Apply for a total of 6 hrs., 2 hrs. each in 3 mutually perpendicular directions.
		Capacitance	Within specified tolerance	
		D.F.	Char. B, E: 2.5% max. Char. F: 5.0% max.	
11	Solderability of Leads		Lead wire should be soldered with uniform coating on the axial direction over 3/4 of the circumferential direction.	The lead wire of a capacitor should be dipped into a ethanol solution of 25wt% rosin and then into molten solder for 2±0.5 sec. In both cases the depth of dipping is up to about 1.5 to 2mm from the root of lead wires. Temp. of solder: Lead Free Solder (Sn-3Ag-0.5Cu) 245±5°C H63 Eutectic Solder 235±5°C
12	Soldering Effect (Non-Preheat)	Appearance	No marked defect	The lead wire should be immersed into the melted solder of 350±10°C (Body of ø5mm and under: 270±5°C) up to about 1.5 to 2mm from the main body for 3.5±0.5 sec. (Body of ø5mm and under: 5±0.5 sec.) Pre-treatment: Capacitor should be stored at 85±2°C for 1 hr., then placed at room condition* for 24±2 hrs. before initial measurements. Post-treatment: Capacitor should be stored for 4 to 24 hrs. at room condition.*
		Capacitance Change	Char. B: Within ±5% Char. E: Within ±15% Char. F: Within ±20%	
		Dielectric Strength (Between Lead Wires)	Per item 4.	

Step	1	2	3	4	5
Temp. (°C)	20±2	-25±3	20±2	85±2	20±2

* "Room condition" Temperature: 15 to 35°C, Relative humidity: 45 to 75%, Atmospheric pressure: 86 to 106kPa

DEB Series Specifications and Test Methods

Continued from the preceding page.

No.	Item		Specifications	Test Method
13	Soldering Effect (On-Preheat)	Appearance	No marked defect	First the capacitor should be stored at 120+0/-5°C for 60+0/-5 sec. Then, as in the figure, the lead wires should be immersed in solder of 260+0/-5°C up to 1.5 to 2.0mm from the root of terminal for 7.5+0/-1 sec.  Pre-treatment: Capacitor should be stored at 85±2°C for 1 hr., then placed at room condition* for 24±2 hrs. before initial measurements. Post-treatment: Capacitor should be stored for 4 to 24 hrs. at room condition.*
		Capacitance Change	Char. B: Within ±5% Char. E: Within ±15% Char. F: Within ±20%	
		Dielectric Strength (Between Lead Wires)	Per item 4.	
14	Temperature and Immersion Cycle	Appearance	No marked defect	The capacitor should be subjected to 5 temperature cycles, then consecutively to 2 immersion cycles. <Temperature Cycle> Step / Temperature (°C) / Time (min) 1 / -25±3 / 30 2 / Room Temp. / 3 3 / 85±3 / 30 4 / Room Temp. / 3 Cycle time: 5 cycles <Immersion Cycle> Step / Temperature (°C) / Time (min) / Immersion Water 1 / 65+5/-0 / 15 / Clean water 2 / 0±3 / 15 / Salt water Cycle time : 2 cycles Pre-treatment: Capacitor should be stored at 85±2°C for 1 hr., then placed at room condition* for 24±2 hrs. before initial measurements. Post-treatment: Capacitor should be stored for 4 to 24 hrs. at room condition.*
		Capacitance Change	Char. B: Within ±10% Char. E: Within ±20% Char. F: Within ±30%	
		D.F.	Char. B, E: 4.0% max. Char. F: 7.5% max.	
		I.R.	2000MΩ min.	
		Dielectric Strength (Between Lead Wires)	Per item 4.	
15	Humidity (Under Steady State)	Appearance	No marked defect	Set the capacitor for 500+24/-0 hrs. at 40±2°C in 90 to 95% relative humidity. Pre-treatment: Capacitor should be stored at 85±2°C for 1 hr., then placed at room condition* for 24±2 hrs. before initial measurements. Post-treatment: Capacitor should be stored for 1 to 2 hrs. at room condition.*
		Capacitance Change	Char. B: Within ±10% Char. E: Within ±20% Char. F: Within ±30%	
		D.F.	Char. B, E: 5.0% max. Char. F: 7.5% max.	
		I.R.	1000MΩ min.	
16	Humidity Loading	Appearance	No marked defect	Apply the rated voltage for 500+24/-0 hrs. at 40±2°C in 90 to 95% relative humidity. (Charge/Discharge current≦50mA) Pre-treatment: Capacitor should be stored at 85±2°C for 1 hr., then placed at room condition* for 24±2 hrs. before initial measurements. Post-treatment: Capacitor should be stored at 85±2°C for 1 hr., then placed at room condition* for 24±2 hrs.
		Capacitance Change	Char. B: Within ±10% Char. E: Within ±20% Char. F: Within ±30%	
		D.F.	Char. B, E: 5.0% max. Char. F: 7.5% max.	
		I.R.	500MΩ min.	
17	Life	Appearance	No marked defect	Apply a DC voltage of 150% of the rated voltage for 1000+48/-0 hrs. at 85±2°C with a relative humidity of 50% max. (Charge/Discharge current≦50mA) Pre-treatment: Capacitor should be stored at 85±2°C for 1 hr., then placed at room condition* for 24±2 hrs. before initial measurements. Post-treatment: Capacitor should be stored at 85±2°C for 1 hr., then placed at room condition* for 24±2 hrs.
		Capacitance Change	Char. B: Within ±10% Char. E: Within ±20% Char. F: Within ±30%	
		D.F.	Char. B, E: 4.0% max. Char. F: 7.5% max.	
		I.R.	2000MΩ min.	

* "Room condition" Temperature: 15 to 35°C, Relative humidity: 45 to 75%, Atmospheric pressure: 86 to 106kPa

High Voltage Ceramic Capacitors

DEC Series (Class 1, 2/DC6.3kV)

■ Features

Coated with flame-retardant epoxy resin (equivalent to UL94V-0 standard).
Please contact us when a halogen-free product* is necessary.
* Cl=900ppm max., Br=900ppm max. and Cl+Br=1500ppm max.

■ Applications

1. Ideal for use as the ballast in backlighting inverters for liquid crystal displays (SL Char.).
2. Ideal for use on high voltage circuits such as Cockcroft circuits (B Char.).

Do not use these products in any automotive power train or safety equipment including battery chargers for electric vehicles and plug-in hybrids. Only Murata products clearly stipulated as "for Automotive use" on its catalog can be used for automobile applications such as power train and safety equipment.

DEC Series Specifications and Test Methods

No.	Item		Specifications	Test Method
1	Operating Temperature Range		-25 to +85°C	
2	Appearance and Dimensions		No visible defect, and dimensions are within specified range.	The capacitor should be visually inspected for evidence of defect. Dimensions should be measured with slide calipers.
3	Marking		To be easily legible	The capacitor should be visually inspected.
4	Dielectric Strength	Between Lead Wires	No failure	The capacitor should not be damaged when DC voltage of 200% of the rated voltage is applied between the lead wires for 1 to 5 sec. (Charge/Discharge current≦50mA)
		Body Insulation	No failure	The capacitor is placed in the container with metal balls of diameter 1mm so that each lead wire, short circuited, is kept about 2mm off the metal balls as shown in the figure at right, and DC voltage of 1.3kV is applied for 1 to 5 sec. between capacitor lead wires and metal balls. (Charge/Discharge current≦50mA) 5	Insulation Resistance (I.R.)	Between Lead Wires	10000MΩ min.	The insulation resistance should be measured with DC500±50V within 60±5 sec. of charging.
6	Capacitance		Within specified tolerance	The capacitance should be measured at 20°C with 1±0.2kHz (Char. SL: 1±0.2MHz) and AC5V(r.m.s.) max.
7	Q		Char. SL: 400+20C*2min. (30pF under) 1000 min. (30pF min.)	The dissipation factor and Q should be measured at 20°C with 1±0.2kHz (Char. SL: 1±0.2MHz) and AC5V(r.m.s.) max.
	Dissipation Factor (D.F.)		Char. B, E: 2.5% max.	
8	Temperature Characteristics		Char. SL: +350 to -1000ppm/°C (Temp. range: +20 to +85°C) Char. B: Within ±10% Char. E: Within +20/-55%	The capacitance measurement should be made at each step specified in the Table.
			Pre-treatment: Capacitor should be stored at 85±2°C for 1 hr., then placed at room condition*1 for 24±2 hrs. before measurements. (Char. B, E)	

Step	1	2	3	4	5
Temp. (°C)	20±2	-25±3	20±2	85±2	20±2

9	Strength of Lead	Pull	Lead wire should not be cut off. Capacitor should not be broken.	As shown in the figure at right, fix the body of the capacitor and apply a tensile weight gradually to each lead wire in the radial direction of the capacitor up to 10N and keep it for 10±1 sec. 		Bending		Each lead wire should be subjected to 5N of weight and bent 90° at the point of egress, in one direction, then returned to its original position and bent 90° in the opposite direction at the rate of one bend in 2 to 3 sec.
10	Vibration Resistance	Appearance	No marked defect	The capacitor should be firmly soldered to the supporting lead wire and vibrated at a frequency range of 10 to 55Hz, 1.5mm in total amplitude, with about a 1-minute rate of vibration change from 10Hz to 55Hz and back to 10Hz. Apply for a total of 6 hrs., 2 hrs. each in 3 mutually perpendicular directions.
		Capacitance	Within specified tolerance	
		Q	Char. SL: 400+20C*2min. (30pF under) 1000 min. (30pF min.)	
		D.F.	Char. B, E: 2.5% max.	
11	Solderability of Leads		Lead wire should be soldered with uniform coating on the axial direction over 3/4 of the circumferential direction.	The lead wire of a capacitor should be dipped into a ethanol solution of 25wt% rosin and then into molten solder for 2±0.5 sec. In both cases the depth of dipping is up to about 1.5 to 2mm from the root of lead wires. Temp. of solder: Lead Free Solder (Sn-3Ag-0.5Cu) 245±5°C H63 Eutectic Solder 235±5°C
12	Soldering Effect (Non-Preheat)	Appearance	No marked defect	The lead wire should be immersed into the melted solder of 350±10°C up to about 1.5 to 2mm from the main body for 3.5±0.5 sec. Pre-treatment: Capacitor should be stored at 85±2°C for 1 hr., then placed at room condition*1 for 24±2 hrs. before initial measurements. (Char. B, E) Post-treatment: Capacitor should be stored for 1 to 2 hrs. at room condition.*1 (Char. SL) Post-treatment: Capacitor should be stored for 4 to 24 hrs. at room condition.*1 (Char. B, E)
		Capacitance Change	Char. SL: Within ±2.5% Char. B: Within ±5% Char. E: Within ±15%	
		Dielectric Strength (Between Lead Wires)	Per item 4.	

*1 "Room condition" Temperature: 15 to 35°C, Relative humidity: 45 to 75%, Atmospheric pressure: 86 to 106kPa
*2 "C" expresses nominal capacitance value (pF).

DEC Series Specifications and Test Methods

Continued from the preceding page.

No.	Item		Specifications	Test Method
13	Soldering Effect (On-Preheat)	Appearance	No marked defect	First the capacitor should be stored at 120+0/-5°C for 60+0/-5 sec. Then, as in the figure, the lead wires should be immersed in solder of 260+0/-5°C up to 1.5 to 2.0mm from the root of terminal for 7.5+0/-1 sec.  Pre-treatment: Capacitor should be stored at 85±2°C for 1 hr., then placed at room condition*1 for 24±2 hrs. before initial measurements. (Char. B, E) Post-treatment: Capacitor should be stored for 1 to 2 hrs. at room condition.*1 (Char. SL) Post-treatment: Capacitor should be stored for 4 to 24 hrs. at room condition.*1 (Char. B, E)
		Capacitance Change	Char. SL: Within ±2.5% Char. B: Within ±5% Char. E: Within ±15%	
		Dielectric Strength (Between Lead Wires)	Per item 4.	
14	Temperature and Immersion Cycle	Appearance	No marked defect	The capacitor should be subjected to 5 temperature cycles, then consecutively to 2 immersion cycles. <Temperature Cycle> Step / Temperature (°C) / Time (min): 1 / -25±3 / 30; 2 / Room Temp. / 3; 3 / 85±3 / 30; 4 / Room Temp. / 3 Cycle time: 5 cycles <Immersion Cycle> Step / Temperature (°C) / Time (min) / Immersion Water: 1 / 65+5/-0 / 15 / Clean water; 2 / 0±3 / 15 / Salt water Cycle time: 2 cycles Pre-treatment: Capacitor should be stored at 85±2°C for 1 hr., then placed at room condition*1 for 24±2 hrs. before initial measurements. (Char. B, E) Post-treatment: Capacitor should be stored for 4 to 24 hrs. at room condition.*1
		Capacitance Change	Char. SL: Within ±3% Char. B: Within ±10% Char. E: Within ±20%	
		Q	Char. SL: 275+5/2C*2min. (30pF under) 350 min. (30pF min.)	
		D.F.	Char. B, E: 4.0% max.	
		I.R.	2000MΩ min.	
		Dielectric Strength (Between Lead Wires)	Per item 4.	
15	Humidity (Under Steady State)	Appearance	No marked defect	Set the capacitor for 500+24/-0 hrs. at 40±2°C in 90 to 95% relative humidity. Pre-treatment: Capacitor should be stored at 85±2°C for 1 hr., then placed at room condition*1 for 24±2 hrs. before initial measurements. (Char. B, E) Post-treatment: Capacitor should be stored for 1 to 2 hrs. at room condition.*1
		Capacitance Change	Char. SL: Within ±5% Char. B: Within ±10% Char. E: Within ±20%	
		Q	Char. SL: 275+5/2C*2min. (30pF under) 350 min. (30pF min.)	
		D.F.	Char. B, E: 5.0% max.	
		I.R.	1000MΩ min.	
16	Humidity Loading	Appearance	No marked defect	Apply the rated voltage for 500+24/-0 hrs. at 40±2°C in 90 to 95% relative humidity. (Charge/Discharge current≦50mA.) Pre-treatment: Capacitor should be stored at 85±2°C for 1 hr., then placed at room condition*1 for 24±2 hrs. before initial measurements. (Char. B, E) Post-treatment: Capacitor should be stored for 1 to 2 hrs. at room condition.*1 (Char. SL) Post-treatment: Capacitor should be stored at 85±2°C for 1 hr., then placed at room condition*1 for 24±2 hrs. (Char. B, E)
		Capacitance Change	Char. SL: Within ±7.5% Char. B: Within ±10% Char. E: Within ±20%	
		Q	Char. SL: 100+10/3C*2min. (30pF under) 200 min. (30pF min.)	
		D.F.	Char. B, E: 5.0% max.	
		I.R.	500MΩ min.	
17	Life	Appearance	No marked defect	Apply a DC voltage of 150% of the rated voltage for 1000+48/-0 hrs. at 85±2°C with a relative humidity of 50% max. (Charge/Discharge current≦50mA.) Pre-treatment: Capacitor should be stored at 85±2°C for 1 hr., then placed at room condition*1 for 24±2 hrs. before initial measurements. (Char. B, E) Post-treatment: Capacitor should be stored for 1 to 2 hrs. at room condition.*1 (Char. SL) Post-treatment: Capacitor should be stored at 85±2°C for 1 hr., then placed at room condition*1 for 24±2 hrs. (Char. B, E)
		Capacitance Change	Char. SL: Within ±3% Char. B: Within ±10% Char. E: Within ±20%

*2 "C" expresses nominal capacitance value (pF).

High Voltage Ceramic Capacitors

DEF Series (Only for LCD Backlight Inverter Circuit/6.3kVp-p)

■ Features

1. Compact size: Diameter is 20% less than DEC series.
2. Low self-heating at high frequency and high voltage due to low dielectric loss of the ceramic material.
3. Operating temperature range is guaranteed up to 105 degrees C.
4. Coated with flame-retardant epoxy resin (equivalent to UL94V-0 standard).
   Please contact us when a halogen-free product* is necessary.
   * Cl=900ppm max., Br=900ppm max. and Cl+Br=1500ppm max.
5. Taping available for automatic insertion.

■ Applications

Ideal for use in LCD backlight inverters.

Do not use these products in any automotive power train or safety equipment including battery chargers for electric vehicles and plug-in hybrids. Only Murata products clearly stipulated as "for Automotive use" on its catalog can be used for automobile applications such as power train and safety equipment.

DEF Series Specifications and Test Methods

No.	Item		Specifications	Test Method
1	Operating Temperature Range		-25 to +105°C	
2	Appearance and Dimensions		No visible defect, and dimensions are within specified range.	The capacitor should be visually inspected for evidence of defect. Dimensions should be measured with slide calipers.
3	Marking		To be easily legible	The capacitor should be visually inspected.
4	Dielectric Strength	Between Lead Wires	No failure	The capacitor should not be damaged when DC12.6kV is applied between the lead wires for 1 to 5 sec. (Charge/Discharge current≦50mA)
		Body Insulation	No failure	The capacitor is placed in the container with metal balls of diameter 1mm so that each lead wire, short circuited, is kept about 2.0mm off the metal balls as shown in the figure at right, and DC voltage of 1.3kV is applied for 1 to 5 sec. between capacitor lead wires and metal balls. (Charge/Discharge current≦50mA) 5	Insulation Resistance (I.R.)	Between Lead Wires	10000MΩ min.	The insulation resistance should be measured with DC500±50V within 60±5 sec. of charging.
6	Capacitance		Within specified tolerance	The capacitance should be measured at 20°C with 1±0.2MHz and AC5V(r.m.s.) max.
7	Q		400+20C*2min. (30pF under) 1000 min. (30pF min.)	The Q should be measured at 20°C with 1±0.2MHz and AC5V(r.m.s.) max.
8	Temperature Characteristics		Char. CH: 0±60ppm/°C Char. SL: +350 to -1000ppm/°C (Temp. range: +20 to +85°C)	The capacitance measurement should be made at each step specified in the Table.

Step	1	2	3	4	5
Temp. (°C)	20±2	-25±3	20±2	85±2	20±2

9	Strength of Lead	Pull	Lead wire should not be cut off. Capacitor should not be broken.	As shown in the figure at right, fix the body of the capacitor and apply a tensile weight gradually to each lead wire in the radial direction of the capacitor up to 10N and keep it for 10±1 sec. 		Bending		Each lead wire should be subjected to 5N of weight and bent 90° at the point of egress, in one direction, then returned to its original position and bent 90° in the opposite direction at the rate of one bend in 2 to 3 sec.
10	Vibration Resistance	Appearance	No marked defect	The capacitor should be firmly soldered to the supporting lead wire and vibrated at a frequency range of 10 to 55Hz, 1.5mm in total amplitude, with about a 1-minute rate of vibration change from 10Hz to 55Hz and back to 10Hz. Apply for a total of 6 hrs., 2 hrs. each in 3 mutually perpendicular directions.
		Capacitance	Within specified tolerance	
		Q	400+20C*2min. (30pF under) 1000 min. (30pF min.)	
11	Solderability of Leads		Lead wire should be soldered with uniform coating on the axial direction over 3/4 of the circumferential direction.	The lead wire of a capacitor should be dipped into a ethanol solution of 25wt% rosin and then into molten solder for 2±0.5 sec. In both cases the depth of dipping is up to about 1.5 to 2.0mm from the root of lead wires. Temp. of solder: Lead Free Solder (Sn-3Ag-0.5Cu) 245±5°C H63 Eutectic Solder 235±5°C
12	Soldering Effect (Non-Preheat)	Appearance	No marked defect	The lead wire should be immersed into the melted solder of 350±10°C up to about 1.5 to 2.0mm from the main body for 3.5±0.5 sec. Post-treatment: Capacitor should be stored for 1 to 2 hrs. at room condition.*1
		Capacitance Change	Within ±2.5%	
		Dielectric Strength (Between Lead Wires)	Per item 4.	

*1 "Room condition" Temperature: 15 to 35°C, Relative humidity: 45 to 75%, Atmospheric pressure: 86 to 106kPa
*2 "C" expresses nominal capacitance value (pF).

High Voltage Ceramic Capacitors ⚠Caution

■ ⚠Caution (Rating)

<DES/DEH/DEA/DEB/DEC Series>

1. Operating Voltage

When DC-rated capacitors are to be used in AC or ripple current circuits, be sure to maintain the Vp-p value of the applied voltage or the Vo-p that contains DC bias within the rated voltage range.

When the voltage is applied to the circuit, starting or stopping may generate irregular voltage for a transit period because of resonance or switching. Be sure to use a capacitor with a rated voltage range that includes these irregular voltages.

When using the low-dissipation DEA (SL Char.) /DEC (SL Char.) /DEH (C, R Char.) /DES (D Char.) series in a high-frequency and high-voltage circuit, be sure to read the instructions in item 4.

When DC-rated capacitors are to be used in input circuits from commercial power source (AC filter), be sure to use Safety Certified Capacitors because various regulations on withstand voltage or impulse withstand established for each type of equipment should be taken into consideration.

Voltage	DC Voltage	DC+AC Voltage	AC Voltage	Pulse Voltage (1)	Pulse Voltage (2)
Positional Measurement					
2. Operating Temperature and Self-generated Heat

Keep the surface temperature of a capacitor below the upper limit of its rated operating temperature range. Be sure to take into account the heat generated by the capacitor itself. When the capacitor is used in a high-frequency current, pulse current or similar current, it may self-generate heat due to dielectric loss. The frequency of the applied sine wave voltage should be less than 300kHz. The applied voltage load (*) should be such that the capacitor's self-generated heat is within 20°C in an atmospheric temperature of 25°C. When measuring, use a thermocouple of small thermal capacity-K of ø0.1mm in conditions where the capacitor is not affected by radiant heat from other components or surrounding ambient fluctuations.

Excessive heat may lead to deterioration of the capacitor's characteristics and reliability.

(Never attempt to perform measurement with the cooling fan running. Otherwise, accurate measurement cannot be ensured.)

*Before using the low-dissipation DEA/DEC (SL Char.) /DEH/DES series, be sure to read the instructions in item 4.

3. Fail-Safe

When the capacitor is broken, failure may result in a short circuit. Be sure to provide an appropriate fail-safe function like a fuse on your product if failure could follow an electric shock, fire or fume.

Continued on the following page.

High Voltage Ceramic Capacitors ⚠Caution

Continued from the preceding page.

4. Load Reduction and Self-generated Heat During Application of High-frequency and High-voltage

Due to the low self-heating characteristics of low-dissipation capacitors, the allowable electric power of these capacitors is generally much higher than that of B characteristic capacitors. However, if the self-heating temperature is 20°C under a high-frequency voltage whose peak-to-peak value equals the capacitor's rated voltage, the capacitor's power consumption may exceed its allowable electric power.

Therefore, when using the DEA/DEC (SL Char.) /DEH /DES series in a high-frequency and high-voltage circuit with a frequency of 1kHz or higher, make sure that the Vp-p values including the DC bias, do not exceed the applied voltage value specified in Table 1. Also make sure that the self-heating temperature (the difference between the capacitor's surface temperature and the capacitor's ambient temperature) at an ambient temperature of 25°C does not exceed the value specified in Table 1.

As shown in Fig. 2, the self-heating temperature depends on the ambient temperature. Therefore, if you are not able to set the ambient temperature to approximately 25°C, please contact our sales representatives or product engineers.

We are offering free software, The Capacitor Selection Tool: by Voltage Form, which will assist you in selecting a suitable capacitor.

The software can be downloaded from Murata's Web site (http://www.murata.com/products/design_support/mmcsv/index.html).

By inputting capacitance values and applied voltage waveform of the specific capacitor series, this software will calculate the capacitor's power consumption and list suitable capacitors.

When the result of this software is different from the measurement result of the self-heating temperature on your side, please contact our sales representatives or product engineers.

FAILURE TO FOLLOW THE ABOVE CAUTIONS (ITEMS 1 TO 4) MAY RESULT, WORST CASE, IN A SHORT CIRCUIT AND CAUSE FUMING OR PARTIAL DISPERSION WHEN THE PRODUCT IS USED.

<Table 1> Allowable Conditions at High frequency

Series	Temp. Char.	DC Rated Voltage	Allowable Conditions at High-frequency *3		Capacitor's Ambient Temp. *2
			Applied Voltage (Max.)	Self-heating Temp. (25°C Ambient Temp.) *1	
DEH	C	500V	500Vp-p	20°C Max.	-25 to +85°C
	R	1kV	800Vp-p	20°C Max.	
			1000Vp-p	5°C Max.	
		2kV	1400Vp-p	20°C Max.	
			2000Vp-p	5°C Max.	
		3.15kV	1600Vp-p	20°C Max.	
			3150Vp-p	5°C Max.	
DEA	SL	1kV	1000Vp-p	5°C Max.	
		2kV	2000Vp-p		
		3.15kV	3150Vp-p		
DEC	SL	6.3kV	6300Vp-p	5°C Max.	
DES	D	500V	500Vp-p	15°C Max.	
		1kV	800Vp-p		
			1000Vp-p	5°C Max.	

*1 Fig. 1 shows the relationship between the applied voltage and the allowable self-heating temperature regarding 1 to 3.15kV rated voltage of the DEH series R characteristic and 1kV rated voltage of the DES series D characteristic.

*2 When the ambient temperature is 85 to 125°C, the applied voltage needs to be further reduced. If the DEA/DEH/DES series needs to be used at an ambient temperature of 85 to 125°C, please contact our sales representatives or product engineers.

*3 Fig. 3 shows reference data on the allowable voltage - frequency characteristics for a sine wave voltage.

<Fig. 1> Relationship Between Applied Voltage and Self-heating Temperature (Allowable Self-heating Temp. at 25°C Ambient Temp.)

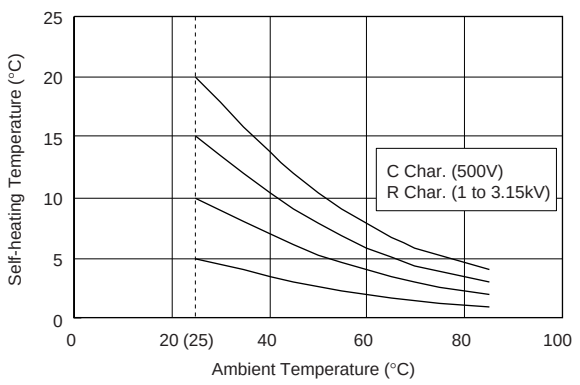
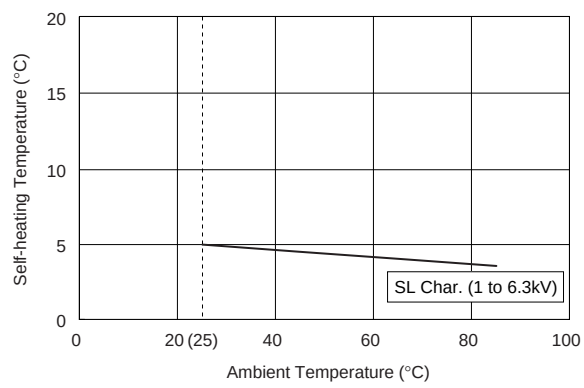
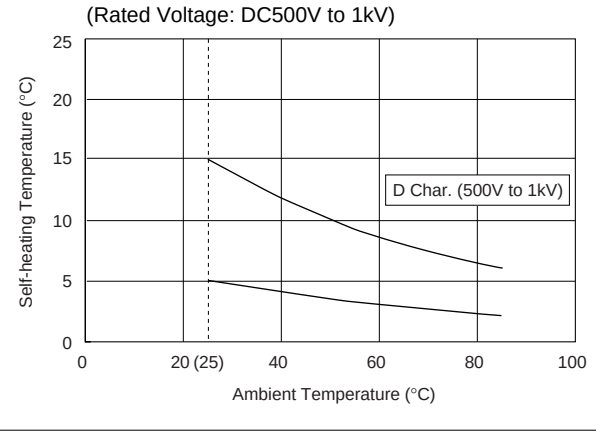
DEH Series C Char. and R Char. (Rated Voltage: DC1kV to 3.15kV)



DEA/DEC Series SL Char. (Rated Voltage: DC1kV to 6.3kV)



DES Series D Char.
(Rated Voltage: DC500V to 1kV)



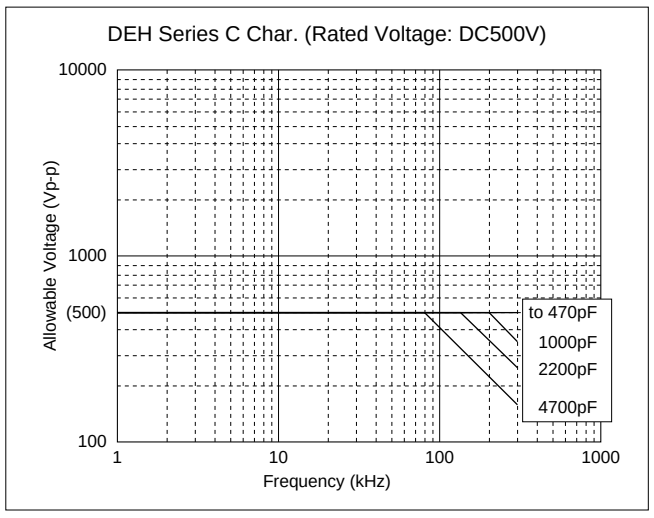
Continued on the following page.

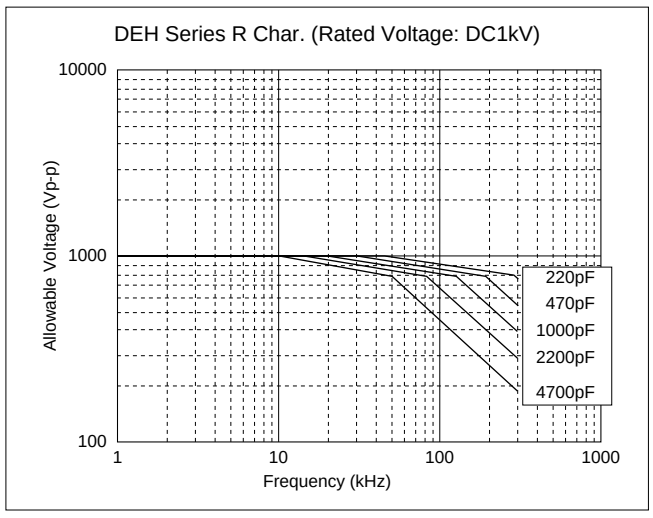
High Voltage Ceramic Capacitors ⚠Caution

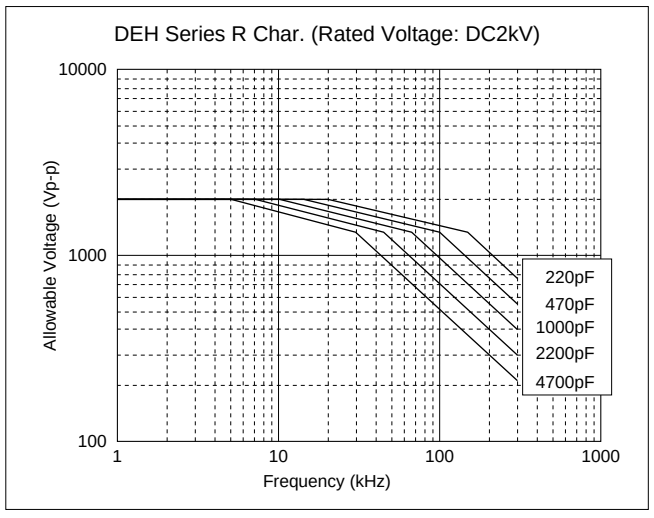
Continued from the preceding page.

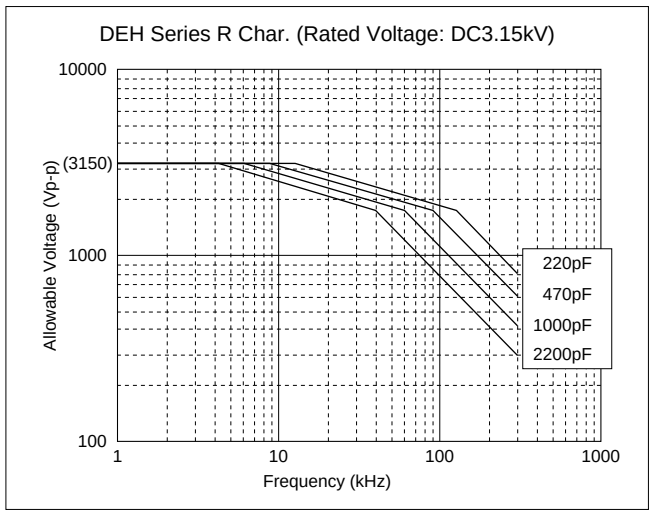
<Fig. 3> Allowable Voltage (Sine Wave Voltage) - Frequency Characteristics (At Ambient Temperature of 85°C or less)

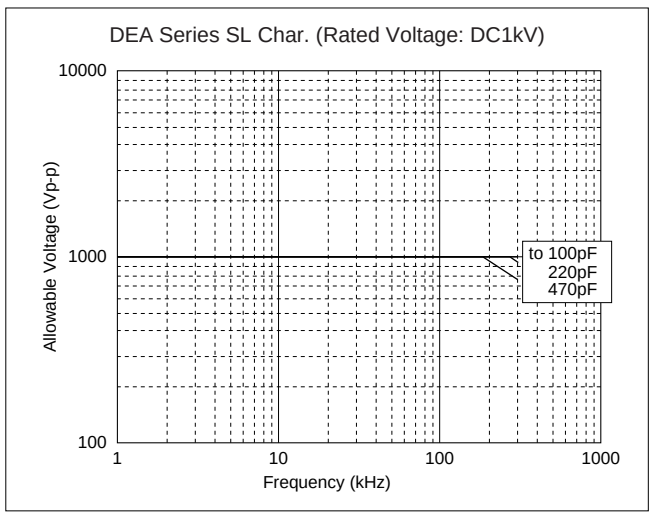
Because of the influence of harmonics, when the applied voltage is a rectangular wave or pulse wave voltage (instead of a sine wave voltage), the heat generated by the capacitor is higher than the value obtained by application of the sine wave with the same fundamental frequency.
Roughly calculated for reference, the allowable voltage for a rectangular wave or pulse wave corresponds approximately to the allowable voltage for a sine wave whose fundamental frequency is twice as large as that of the rectangular wave or pulse wave. This allowable voltage, however, varies depending on the voltage and current waveforms. Therefore, you are requested to make sure that the self-heating temperature is not higher than the value specified in Table 1.

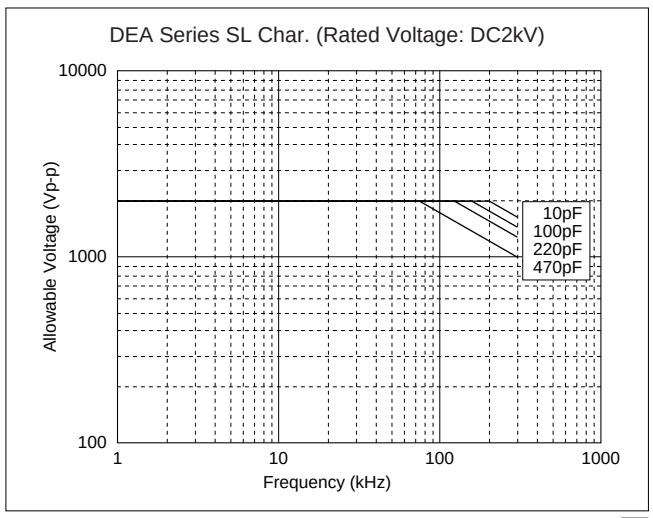












Continued on the following page.

High Voltage Ceramic Capacitors ⚠Caution

Continued from the preceding page.

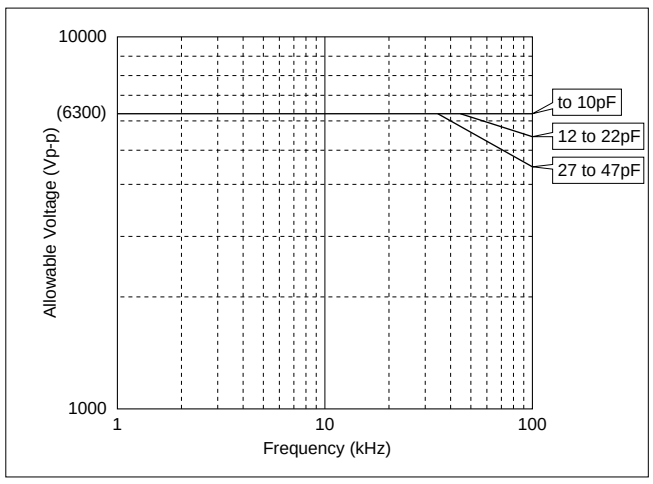
<DEF Series>

1. Operating Voltage

The frequency of the applied sine wave voltage should be less than 100kHz. The applied voltage should be less than the value shown in the figure below. For non-sine wave that includes a harmonic frequency, please contact our sales representatives or product engineers.



The temperature of the surface of the capacitor: below the upper limit of its rated operating temperature range (including self-heating).

The capacitor can be applied at a maximum of 6.3kVp-p at 100kHz when the lamp is turned on.

Voltage	AC Voltage
Positional Measurement	
2. Operating Temperature and Self-generated Heat

Keep the surface temperature of a capacitor below the upper limit of its rated operating temperature range.
Be sure to take into account the heat generated by the capacitor itself. When the capacitor is used in a high-frequency current, pulse current or similar current, it may self-generate heat due to dielectric loss.
Excessive heat may lead to deterioration of the capacitor's characteristics and reliability. (Never attempt to perform measurement with the cooling fan running. Otherwise, accurate measurement cannot be ensured.)

3. Fail-Safe

When the capacitor is broken, failure may result in a short circuit. Be sure to provide an appropriate fail-safe function like a fuse on your product if failure could result in an electric shock, fire or fume.

High Voltage Ceramic Capacitors ⚠Caution

■ ⚠Caution (Storage and Operating Condition)

Operating and Storage Environment

The insulating coating of capacitors does not form a perfect seal; therefore, do not use or store capacitors in a corrosive atmosphere, especially where chloride gas, sulfide gas, acid, alkali, salt or the like are present. Also, avoid exposure to moisture. Before cleaning, bonding or molding this product, verify that these processes do not affect product quality by testing the performance of a cleaned, bonded or molded product in the intended equipment. Store the capacitors where the temperature and relative humidity do not exceed -10 to 40 degrees centigrade and 15 to 85%.

Use capacitors within 6 months after delivery.
Check the solderability after 6 months or more.

FAILURE TO FOLLOW THE ABOVE CAUTIONS MAY RESULT, WORST CASE, IN A SHORT CIRCUIT AND CAUSE FUMING OR PARTIAL DISPERSION WHEN THE PRODUCT IS USED.

■ ⚠Caution (Soldering and Mounting)

1. Vibration and Impact
   Do not expose a capacitor or its lead wires to excessive shock or vibration during use.
   Excessive shock or vibration may cause fatigue destruction of lead wires mounted on the circuit board.
   Please take measures to hold a capacitor on the circuit boards by adhesive, molding resin or another coating.
   Please confirm there is no influence of holding measures on the product with the intended equipment.
2. Soldering
   When soldering this product to a PCB/PWB, do not exceed the solder heat resistance specification of the capacitor. Subjecting this product to excessive heating could melt the internal junction solder and may result in thermal shocks that can crack the ceramic element.
   Soldering the capacitor with a soldering iron should be performed in following conditions.
   Temperature of iron-tip: 400 degrees C. max.
   Soldering iron wattage: 50W max.
   Soldering time: 3.5 sec. max.
3. Bonding, Resin Molding and Coating
   For bonding, molding or coating this product, verify that these processes do not affect the quality of the capacitor by testing the performance of the bonded, molded or coated product in the intended equipment. When the amount of applications, dryness/hardening conditions of adhesives and molding resins containing organic solvents (ethyl acetate, methyl ethyl ketone, toluene, etc). are unsuitable, the outer coating resin of a capacitor is damaged by the organic solvents and it may result, worst case, in a short circuit.
   The variation in thickness of adhesive, molding resin or coating may cause outer coating resin cracking and/or ceramic element cracking of a capacitor in a temperature cycling.
4. Treatment after Bonding, Resin Molding and Coating
   When the outer coating is hot (over 100 degrees C.) after soldering, it becomes soft and fragile.
   Therefore, please be careful not to give it mechanical stress.

FAILURE TO FOLLOW THE ABOVE CAUTIONS MAY RESULT, WORST CASE, IN A SHORT CIRCUIT AND CAUSE FUMING OR PARTIAL DISPERSION WHEN THE PRODUCT IS USED.

■ ⚠Caution (Handling)

Vibration and Impact

Do not expose a capacitor or its lead wires to excessive shock or vibration during use.
Excessive shock or vibration may cause fatigue destruction of lead wires mounted on the circuit board.
Please take measures to hold a capacitor on the circuit boards by adhesive, molding resin or another coating.

Please confirm there is no influence of holding measures on the product with the intended equipment.

FAILURE TO FOLLOW THE ABOVE CAUTIONS MAY RESULT, WORST CASE, IN A SHORT CIRCUIT AND CAUSE FUMING OR PARTIAL DISPERSION WHEN THE PRODUCT IS USED.

High Voltage Ceramic Capacitors Notice

■ Notice (Soldering and Mounting)

Cleaning (ultrasonic cleaning)

To perform ultrasonic cleaning, observe the following conditions.
Rinse bath capacity: Output of 20 watts per liter or less.
Rinsing time: 5 min. maximum.
Do not vibrate the PCB/PWB directly.
Excessive ultrasonic cleaning may lead to fatigue destruction of the lead wires.

■ Notice (Rating)

Capacitance Change of Capacitors

1. DEA/DEC/DEF Series (Temp. Char. CH, SL)
   Capacitance might change a little depending on the surrounding temperature or an applied voltage. Please contact us if you intend to use this product in a strict time constant circuit.
2. DEB/DEC Series (Temp. Char. B, E, F)
   Capacitors have an aging characteristic, whereby the capacitor continually decreases its capacitance slightly if the capacitor is left on for a long time. Moreover, capacitance might change greatly depending on the surrounding temperature or an applied voltage. Therefore, it is not likely to be suitable for use in a time constant circuit. Please contact us if you need detailed information.
3. DEH/DES Series
   Capacitance might change greatly depending on the surrounding temperature or an applied voltage. Therefore, it is not likely to be suitable for use in a time constant circuit. Please contact us if you need detailed information.

Safety Standard Certified Ceramic Capacitors for Automotive

Type KJ -IEC60384-14 Class X1, Y2-

■ Features

1. Capacitors designed for AC line filters for PHEV/EV.
2. Meet AEC-Q200
3. Heat cycle: 1000cycle (-55/+125 deg.)
4. Class X1/Y2 capacitors certified by UL/ENEC(VDE).
5. Rated Voltage: AC300V
6. Coated with flame-retardant epoxy resin (conforming to UL94V-0 standard).
7. Available product for RoHS Restriction (EU Directive 2002/95/EC).
8. Taping available for automatic insertion.

■ Applications

1. Ideal for use as Y capacitors for AC line filters and primary-secondary coupling on battery chargers for PHEV/EV.
2. Ideal for use as a filter capacitor for DC-DC converters for PHEV/EV and HEV.

Three blank columns are filled with the lead and packaging codes. Please refer to the 3 columns on the right for the appropriate code.
Murata part numbers might be changed depending on lead code or any other changes. Therefore, please specify only the type name (KJ) and capacitance of products in the parts list when it is required for applying safety standard of electric equipment.

Type KJ Specifications and Test Methods

Operating Temperature Range: -40 to +125°C

No.	Item		Specifications	Test Method
1	Appearance and Dimensions		No visible defect, and dimensions are within specified range.	The capacitor should be visually inspected for evidence of defect. Dimensions should be measured with slide calipers.
2	Marking		To be easily legible	The capacitor should be visually inspected.
3	Capacitance		Within specified tolerance	The dissipation factor should be measured at 20˚C with 1±0.1kHz and AC5V(r.m.s.) max.
4	Dissipation Factor (D.F.)		Char. B, E: D.F.≦2.5%	
5	Insulation Resistance (I.R.)		10000MΩ min.	The insulation resistance should be measured with DC500±50V within 60±5 sec. of charging. The voltage should be applied to the capacitor through a resistor of 1MΩ.
6	Dielectric Strength	Between Lead Wires	No failure	The capacitor should not be damaged when the test voltages from Table 1 are applied between the lead wires for 60 sec. <Table 1> Type: KJ — Test Voltage: AC2600V(r.m.s.)
		Body Insulation	No failure	First, the terminals of the capacitor should be connected together. Then, as shown in the figure at right, a metal foil should be closely wrapped around the body of the capacitor to the distance of about 3 to 4mm from each terminal. Then, the capacitor should be inserted into a container filled with metal balls of about 1mm diameter. Finally, AC voltage from Table 2 is applied for 60 sec. between the capacitor lead wires and metal balls. <Table 2> Type: KJ — Test Voltage: AC2600V(r.m.s.) 7	Temperature Characteristics		Char. B: Within ±10%; Char. E: Within $^{+20}_{-55}$% (Temp. range: -25 to +85°C)	The capacitance measurement should be made at each step specified in Table 3. <Table 3> Step 1: 20±2; 2: -25±2; 3: 20±2; 4: 85±2; 5: 20±2 Pre-treatment: Capacitor should be stored at 125±3°C for 1 hr., then placed at room condition* for 24±2 hrs. before initial measurements.
8	Solderability		Lead wire should be soldered with uniform coating on the axial direction over 3/4 of the circumferential direction.	Should be placed into steam aging for 8 hrs.±15 min. After the steam aging, the lead wire of a capacitor should be dipped into an ethanol solution of 25% rosin and then into molten solder for 5+0/-0.5 sec. The depth of immersion is up to about 1.5 to 2.0mm from the root of lead wires. Temp. of solder: Lead Free Solder (Sn-3Ag-0.5Cu) 245±5°C H63 Eutectic Solder 235±5°C
9	Resistance to Soldering Heat	Appearance	No marked defect	As shown in the figure, the lead wires should be immersed in solder of 260±5°C up to 1.5 to 2.0mm from the root of terminal for 10±1 sec. Pre-treatment: Capacitor should be stored at 125±3°C for 1 hr., then placed at room condition* for 24±2 hrs. before initial measurements. Post-treatment: Capacitor should be stored for 1 to 2 hrs. at room condition.* 		Capacitance Change	Within ±10%	
		I.R.	1000MΩ min.	
		Dielectric Strength	Per Item 6	

* "Room condition" Temperature: 15 to 35°C, Relative humidity: 45 to 75%, Atmospheric pressure: 86 to 106kPa

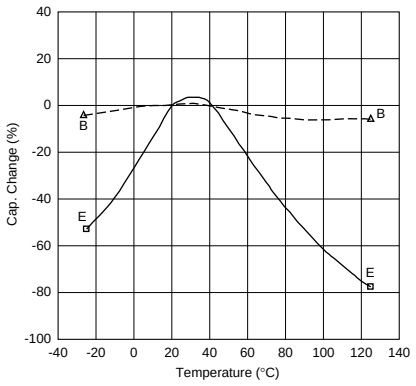
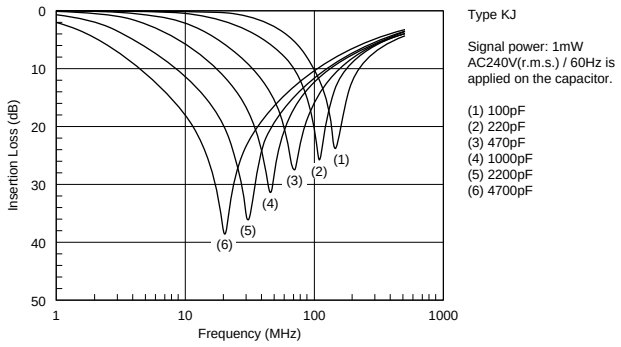
Safety Certified Ceramic Capacitors for Automotive Characteristics Data (Typical Example)

■ Capacitance - Temperature Characteristics



■ Insertion Loss - Frequency Characteristics



Type KJ

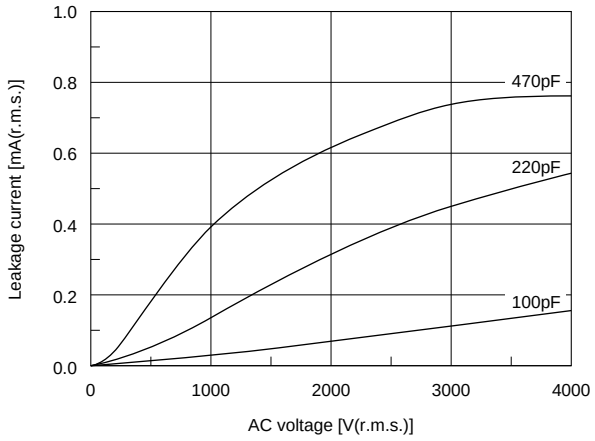
Signal power: 1mW
AC240V(r.m.s.) / 60Hz is applied on the capacitor.

(1) 100pF
(2) 220pF
(3) 470pF
(4) 1000pF
(5) 2200pF
(6) 4700pF

■ Leakage Current Characteristics

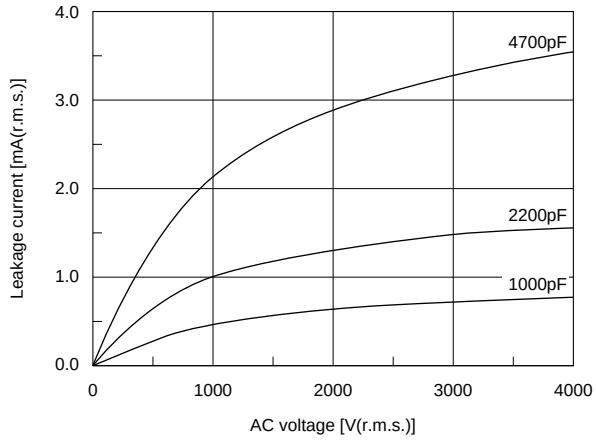
Type KJ (B char.)

AC voltage : 60Hz
Temperature : 25°C



Type KJ (E char.)

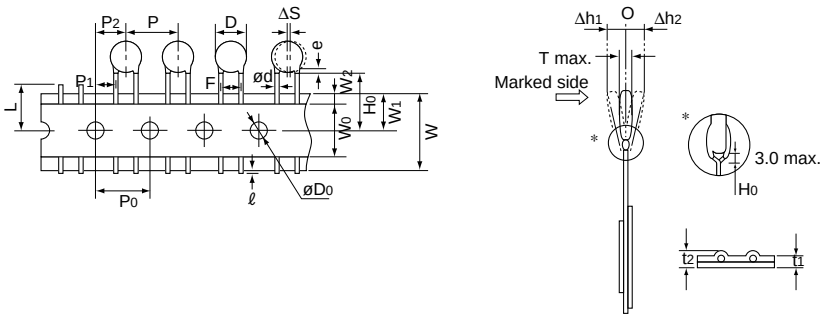
AC voltage : 60Hz
Temperature : 25°C



Safety Certified Ceramic Capacitors for Automotive Packaging

■ Taping Specifications

● 15mm pitch / lead spacing 7.5mm taping
Vertical crimp type
(Lead Code: N3)



Item	Code	N3
Pitch of component	P	15.0±2.0
Pitch of sprocket hole	P_0	15.0±0.3
Lead spacing	F	7.5±1.0
Length from hole center to component center	P_2	7.5±1.5
Length from hole center to lead	P_1	3.75±1.0
Body diameter	D	See the individual product specifications.
Deviation along tape, left or right	ΔS	0±2.0
Carrier tape width	W	18.0±0.5
Position of sprocket hole	W_1	9.0±0.5
Lead distance between reference and bottom planes	H_0	$18.0^{+2.0}_{-0}$
Protrusion length	ℓ	+0.5 to -1.0
Diameter of sprocket hole	øD_0	4.0±0.1
Lead diameter	ød	0.6±0.05
Total tape thickness	t_1	0.6±0.3
Total thickness, tape and lead wire	t_2	1.5 max.
Body thickness	T	7.0 max.
Portion to cut in case of defect	L	$11.0^{+0}_{-1.0}$
Hold down tape width	W_0	11.5 min.
Hold down tape position	W_2	1.5±1.5
Coating extension on lead	e	Up to the end of crimp
Deviation across tape, front	Δh_1	2.0 max.
Deviation across tape, rear	Δh_2	

(in mm)

■ Packaging Styles

Bulk	Taping
Polyethylene Bag	Ammo Pack
	

■ Minimum Quantity (Order in Sets Only)

[Bulk] (pcs./Bag)

Body Dia. D (mm)	Lead Code A3	Lead Code B3
	Long	Short
7 to 10	250	500
12	200	250

[Taping]
Lead Code: N3
700pcs./Ammo Pack

Safety Certified Ceramic Capacitors for Automotive ⚠Caution

■ ⚠Caution (Rating)

1. Operating Voltage

When DC-rated capacitors are to be used in AC or ripple current circuits, be sure to maintain the Vp-p value of the applied voltage or the Vo-p that contains DC bias within the rated voltage range.

When the voltage is applied to the circuit, starting or stopping may generate irregular voltage for a transit period because of resonance or switching. Be sure to use a capacitor with a rated voltage range that includes these irregular voltages.

Voltage	DC Voltage	DC+AC Voltage	AC Voltage	Pulse Voltage (1)	Pulse Voltage (2)
Positional Measurement					
2. Operating Temperature and Self-generated Heat

Keep the surface temperature of a capacitor below the upper limit of its rated operating temperature range. Be sure to take into account the heat generated by the capacitor itself. When the capacitor is used in a high-frequency current, pulse current or similar current, it may have self-generated heat due to dielectric loss. Applied voltage load should be such that self-generated heat is within 20°C under the condition where the capacitor is subjected to an atmospheric temperature of 25°C. When measuring, use a thermocouple of small thermal capacity-K of ø0.1mm under conditions where the capacitor is not affected by radiant heat from other components or wind from surroundings. Excessive heat may lead to deterioration of the capacitor's characteristics and reliability. (Never attempt to perform measurement with the cooling fan running. Otherwise, accurate measurement cannot be ensured.)

3. Test Condition for Withstanding Voltage

(1) Test Equipment

Test equipment for AC withstanding voltage should be used with the performance of the wave similar to 50/60Hz sine wave.

If the distorted sine wave or overload exceeding the specified voltage value is applied, a defect may be caused.

Continued on the following page.

Safety Certified Ceramic Capacitors for Automotive ⚠Caution

Continued from the preceding page.

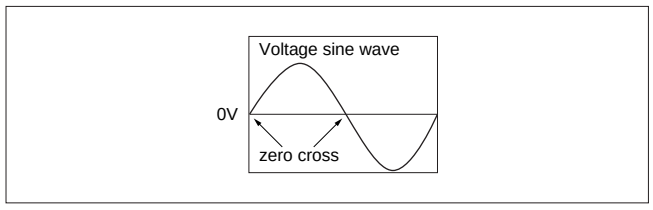
(2) Voltage Applied Method

When the withstanding voltage is applied, the capacitor's lead or terminal should be firmly connected to the output of the withstanding voltage test equipment, and then the voltage should be raised from near zero to the test voltage.

If the test voltage without the raise from near zero voltage would be applied directly to capacitor, test voltage should be applied with the zero cross.* At the end of the test time, the test voltage should be reduced to near zero, and then capacitor's lead or terminal should be taken off the output of the withstanding voltage test equipment.

If the test voltage without the raise from near zero voltage would be applied directly to capacitor, the surge voltage may rise, and therefore, a defect may be caused.

*ZERO CROSS is the point where voltage sine wave passes 0V. See the figure at right.



4. Fail-Safe

When the capacitor is broken, failure may result in a short circuit. Be sure to provide an appropriate fail-safe function like a fuse on your product if failure could result in an electric shock, fire or fuming.

FAILURE TO FOLLOW THE ABOVE CAUTIONS MAY RESULT, WORST CASE, IN A SHORT CIRCUIT AND CAUSE FUMING OR PARTIAL DISPERSION WHEN THE PRODUCT IS USED.

Safety Certified Ceramic Capacitors for Automotive ⚠Caution

■ ⚠Caution (Storage and Operating Condition)

Operating and Storage Environment

The insulating coating of capacitors does not form a perfect seal; therefore, do not use or store capacitors in a corrosive atmosphere, especially where chloride gas, sulfide gas, acid, alkali, salt or the like are present. Also, avoid exposure to moisture. Before cleaning, bonding, or molding this product, verify that these processes do not affect product quality by testing the performance of a cleaned, bonded or molded product in the intended equipment. Store the capacitors where the temperature and relative humidity do not exceed -10 to 40 degrees centigrade and 15 to 85%.

Use capacitors within 6 months after delivery.
Check the solderability after 6 months or more.

FAILURE TO FOLLOW THE ABOVE CAUTIONS MAY RESULT, WORST CASE, IN A SHORT CIRCUIT AND CAUSE FUMING OR PARTIAL DISPERSION WHEN THE PRODUCT IS USED.

■ ⚠Caution (Soldering and Mounting)

1. Vibration and Impact
   Do not expose a capacitor or its lead wires to excessive shock or vibration during use.
   Excessive shock or vibration may cause fatigue destruction of lead wires mounted on the circuit board.
   Please take measures to hold a capacitor on the circuit boards by adhesive, molding resin or another coating.
   Please confirm there is no influence of holding measures on the product with the intended equipment.
2. Soldering
   When soldering this product to a PCB/PWB, do not exceed the solder heat resistance specifications of the capacitor. Subjecting this product to excessive heating could melt the internal junction solder and may result in thermal shocks that can crack the ceramic element.
   Soldering the capacitor with a soldering iron should be performed in the following conditions.
   Temperature of iron-tip: 400 degrees C. max.
   Soldering iron wattage: 50W max.
   Soldering time: 3.5 sec. max.
3. Bonding, Resin Molding and Coating
   For bonding, molding or coating this product, verify that these processes do not affect the quality of the capacitor by testing the performance of the bonded, molded or coated product in the intended equipment. When the amount of applications, dryness/hardening conditions of adhesives and molding resins containing organic solvents (ethyl acetate, methyl ethyl ketone, toluene, etc). are unsuitable, the outer coating resin of a capacitor is damaged by the organic solvents and it may result, worst case, in a short circuit.
   The variation in thickness of adhesive, molding resin or coating may cause outer coating resin cracking and/or ceramic element cracking of a capacitor in a temperature cycling.
4. Treatment after Bonding, Resin Molding and Coating
   When the outer coating is hot (over 100 degrees C.) after soldering, it becomes soft and fragile. Therefore, please be careful not to give it mechanical stress.

FAILURE TO FOLLOW THE ABOVE CAUTIONS MAY RESULT, WORST CASE, IN A SHORT CIRCUIT AND CAUSE FUMING OR PARTIAL DISPERSION WHEN THE PRODUCT IS USED.

■ ⚠Caution (Handling)

Vibration and Impact

Do not expose a capacitor or its lead wires to excessive shock or vibration during use.
Excessive shock or vibration may cause fatigue destruction of lead wires mounted on the circuit board.
Please take measures to hold a capacitor on the circuit boards by adhesive, molding resin or another coating.

Please confirm there is no influence of holding measures on the product with the intended equipment.

FAILURE TO FOLLOW THE ABOVE CAUTIONS MAY RESULT, WORST CASE, IN A SHORT CIRCUIT AND CAUSE FUMING OR PARTIAL DISPERSION WHEN THE PRODUCT IS USED.

Safety Certified Ceramic Capacitors for Automotive Notice

■ Notice (Soldering and Mounting)

Cleaning (ultrasonic cleaning)

To perform ultrasonic cleaning, observe the following conditions.
Rinse bath capacity: Output of 20 watts per liter or less.
Rinsing time: 5 min. maximum.
Do not vibrate the PCB/PWB directly.
Excessive ultrasonic cleaning may lead to fatigue destruction of the lead wires.

■ Notice (Rating)

1. Capacitance Change of Capacitors
   Capacitors have an aging characteristic, whereby the capacitor continually decreases its capacitance slightly if the capacitor is left on for a long time. Moreover, capacitance might change greatly depending on the surrounding temperature or an applied voltage. Therefore, it is not likely to be suitable for use in a constant time circuit.
   Please contact us if you need detailed information.
2. Performance Check by Equipment
   Before using a capacitor, check that there is no problem in the equipment's performance and the specifications.

Generally speaking, CLASS 2 ceramic capacitors have voltage dependence characteristics and temperature dependence characteristics in capacitance. Therefore, the capacitance value may change depending on the operating condition in the equipment. Therefore, be sure to confirm the apparatus performance of receiving influence in the capacitance value change of a capacitor, such as leakage current and noise suppression characteristic.
Moreover, check the surge-proof ability of a capacitor in the equipment, if needed, because the surge voltage may exceed specific value by the inductance of the circuit.

Safety Certified Ceramic Capacitors/High Voltage Ceramic Capacitors ISO9000 Certifications

Manufacturing plants that produce the products in this catalog have obtained the ISO9000 quality system certificate.

Plant	Applied Standard
Izumo Murata Manufacturing Co., Ltd.	ISO9001
Murata Electronics (Thailand), Ltd.	ISO9001
Taiwan Murata Electronics Co., Ltd.	ISO9001

⚠Note:

1. Export Control
   <For customers outside Japan>
   No Murata products should be used or sold, through any channels, for use in the design, development, production, utilization, maintenance or operation of, or otherwise contribution to (1) any weapons (Weapons of Mass Destruction [nuclear, chemical or biological weapons or missiles] or conventional weapons) or (2) goods or systems specially designed or intended for military end-use or utilization by military end-users.
   <For customers in Japan>
   For products which are controlled items subject to the “Foreign Exchange and Foreign Trade Law” of Japan, the export license specified by the law is required for export.
2. Please contact our sales representatives or product engineers before using the products in this catalog for the applications listed below, which require especially high reliability for the prevention of defects which might directly damage a third party's life, body or property, or when one of our products is intended for use in applications other than those specified in this catalog.
   ① Aircraft equipment ② Aerospace equipment
   ③ Undersea equipment ④ Power plant equipment
   ⑤ Medical equipment ⑥ Transportation equipment (vehicles, trains, ships, etc.)
   ⑦ Traffic signal equipment ⑧ Disaster prevention / crime prevention equipment
   ⑨ Data-processing equipment ⑩ Application of similar complexity and/or reliability requirements to the applications listed above
3. Product specifications in this catalog are as of May 2011. They are subject to change or our products in it may be discontinued without advance notice. Please check with our sales representatives or product engineers before ordering. If there are any questions, please contact our sales representatives or product engineers.
4. Please read rating and ⚠CAUTION (for storage, operating, rating, soldering, mounting and handling) in this catalog to prevent smoking and/or burning, etc.
5. This catalog has only typical specifications because there is no space for detailed specifications. Therefore, please review our product specifications or consult the approval sheet for product specifications before ordering.
6. Please note that unless otherwise specified, we shall assume no responsibility whatsoever for any conflict or dispute that may occur in connection with the effect of our and/or a third party's intellectual property rights and other related rights in consideration of your use of our products and/or information described or contained in our catalogs. In this connection, no representation shall be made to the effect that any third parties are authorized to use the rights mentioned above under licenses without our consent.
7. No ozone depleting substances (ODS) under the Montreal Protocol are used in our manufacturing process.
