## Voltage Detector Series

The NCP304 and NCP305 series are second generation ultra-low current voltage detectors. These devices are specifically designed for use as reset controllers in portable microprocessor based systems where extended battery life is paramount.

Each series features a highly accurate undervoltage detector with hysteresis which prevents erratic system reset operation as the comparator threshold is crossed.

The NCP304 series consists of complementary output devices that are available with either an active high or active low reset output. The NCP305 series has an open drain N-Channel output with an active low reset output.

The NCP304 and NCP305 device series are available in the SC-82AB package with standard undervoltage thresholds. Additional thresholds that range from 0.9 V to 4.9 V in 100 mV steps can be manufactured.

### Features

- Quiescent Current of 1.0  $\mu$ A Typical
- High Accuracy Undervoltage Threshold of 2.0%
- Wide Operating Voltage Range of 0.8 V to 10 V
- Complementary or Open Drain Reset Output
- Active Low or Active High Reset Output
- Pb-Free Packages are Available
- NCV Prefix for Automotive and Other Applications Requiring Unique Site and Control Change Requirements; AEC-Q100 Qualified and PPAP Capable

### Typical Applications

- Microprocessor Reset Controller
- Low Battery Detection
- Power Fail Indicator
- Battery Backup Detection

### ORDERING INFORMATION

See detailed ordering, marking and shipping information in the ordering information section on page 19 of this data sheet.

This device contains 38 active transistors.

\* The representative block diagram depicts active low reset output 'L' suffix devices. The comparator input is interchanged for the active high output 'H' suffix devices.

This device contains 37 active transistors.

## MAXIMUM RATINGS (Note 1)

Rating	Symbol	Value	Unit
Input Power Supply Voltage (Pin 2)	$V_{in}$	12	V
Output Voltage (Pin 1) Complementary, NCP304 N-Channel Open Drain, NCP305	$V_{OUT}$	$-0.3 \text{ to } V_{in}+0.3$ $-0.3 \text{ to } 12$	V
Output Current (Pin 1) (Note 2)	$I_{OUT}$	70	mA
Thermal Resistance, Junction-to-Air	$R_{\theta JA}$	285	$^{\circ}\text{C}/\text{W}$
Maximum Junction Temperature	$T_J$	+125	$^{\circ}\text{C}$
Storage Temperature Range	$T_{stg}$	-55 to +150	$^{\circ}\text{C}$
Latchup Performance (Note 3) Positive Negative	$I_{LATCHUP}$	500 170	mA

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

1. This device series contains ESD protection and exceeds the following tests:

Human Body Model 2000 V per MIL-STD-883, Method 3015.  
Machine Model Method 200 V.

2. The maximum package power dissipation limit must not be exceeded.

$$P_D = \frac{T_J(\max)-T_A}{R_{\theta JA}}$$

3. Maximum Ratings per JEDEC standard JESD78.

## ELECTRICAL CHARACTERISTICS (For all values $T_A = 25^{\circ}\text{C}$ , unless otherwise noted.)

Characteristic	Symbol	Min	Typ	Max	Unit

4. In the case of CMOS Output Type: The time interval between the rising edge of  $V_{DD}$  input pulse from 0.7 V to  $(+V_{DET}) +2.0 \text{ V}$  and output voltage level becoming to  $V_{DD}/2$ . In the case of N-Channel Open Drain Output Type: Output pin is pulled up with a resistance of  $470 \text{ k}\Omega$  to 5.0 V, the time interval between the rising edge of  $V_{DD}$  input pulse from 0.7 V to  $(+V_{DET}) +2.0 \text{ V}$  and output voltage level becoming to 2.5 V.

## NCP304, NCP305

NCP304 and NCP305 series are measured with a 10 pF capacitive load. NCP305 has an additional 470 k pullup resistor connected from the reset output to +5.0 V. The reset output voltage waveforms are shown for the active low 'L' devices. The upper detector threshold,  $V_{DET+}$  is the sum of the lower detector threshold,  $V_{DET-}$  plus the input hysteresis,  $V_{HYS}$ .

## OPERATING DESCRIPTION

The NCP304 and NCP305 series devices are second generation ultra-low current voltage detectors. Figures 25 and 26 show a timing diagram and a typical application. Initially consider that input voltage  $V_{in}$  is at a nominal level and it is greater than the voltage detector upper threshold ( $V_{DET+}$ ), and the reset output (Pin 1) will be in the high state for active low devices, or in the low state for active high devices. If there is a power interruption and  $V_{in}$  becomes significantly deficient, it will fall below the lower detector threshold ( $V_{DET-}$ ). This sequence of events causes the Reset output to be in the low state for active low devices, or in the

high state for active high devices. After completion of the power interruption,  $V_{in}$  will again return to its nominal level and become greater than the  $V_{DET+}$ . The voltage detector has built-in hysteresis to prevent erratic reset operation as the comparator threshold is crossed.

Although these device series are specifically designed for use as reset controllers in portable microprocessor based systems, they offer a cost-effective solution in numerous applications where precise voltage monitoring is required. Figure 26 through Figure 32 shows various application examples.

## APPLICATION CIRCUIT INFORMATION

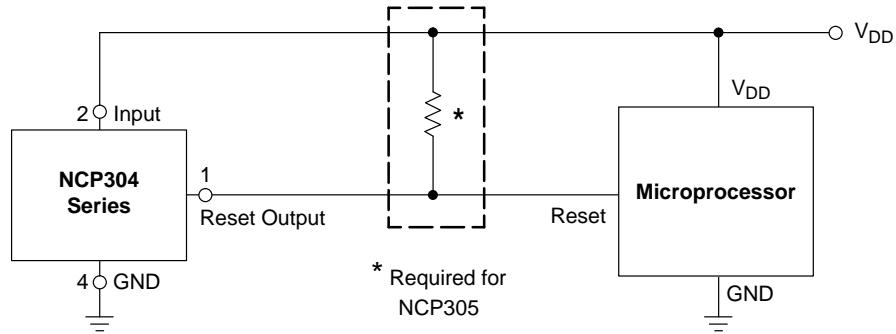

Figure 26. Microprocessor Reset Circuit

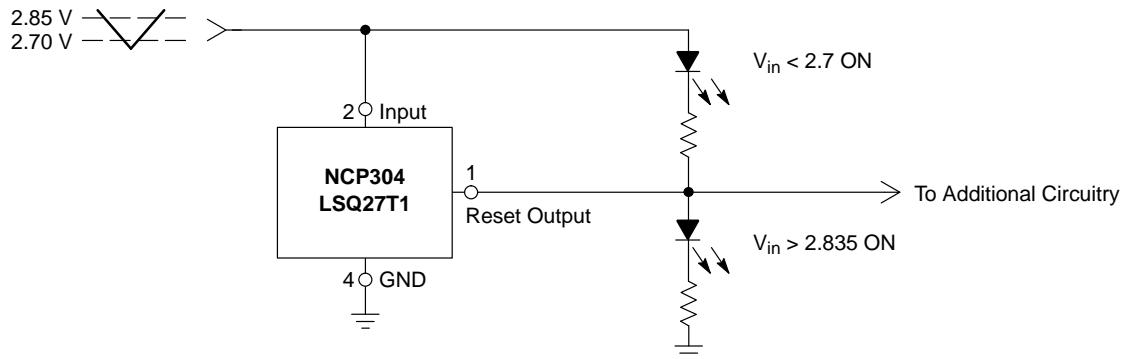

Figure 27. Battery Charge Indicator

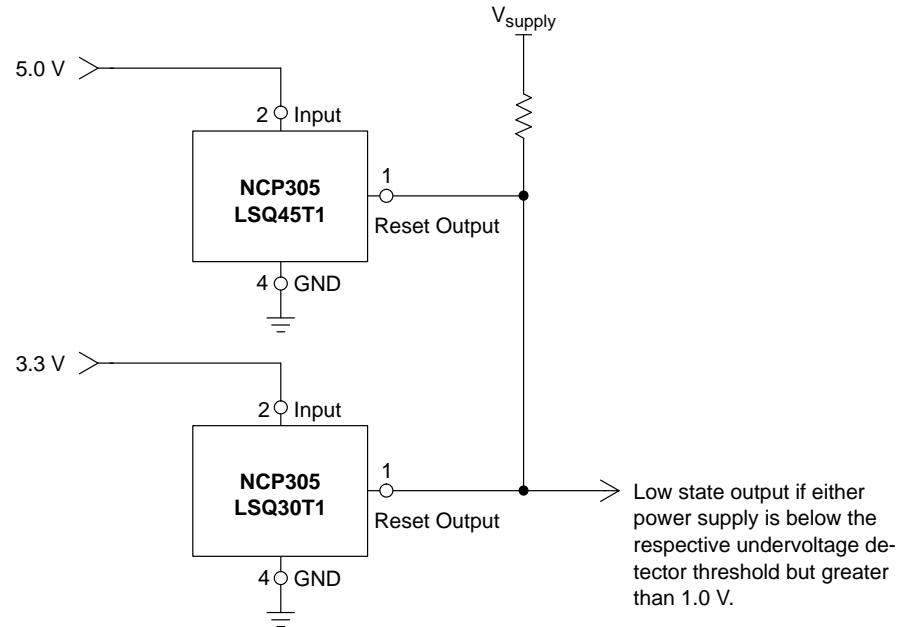

Figure 28. Dual Power Supply Undervoltage Supervision

## NCP304, NCP305

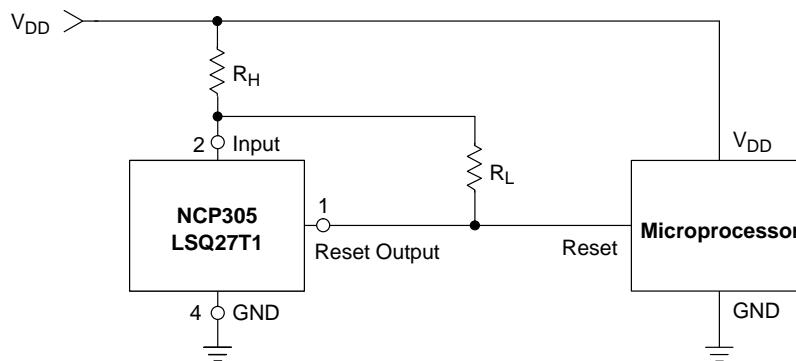

Figure 29. Microprocessor Reset Circuit with Additional Hysteresis

Comparator hysteresis can be increased with the addition of resistor  $R_H$ . The hysteresis equations have been simplified and do not account for the change of input current  $I_{in}$  as  $V_{in}$  crosses the comparator threshold. The internal resistance,  $R_{in}$  is simply calculated using  $I_{in} = 0.26 \mu A$  at 2.6 V.

$V_{in}$  Decreasing:

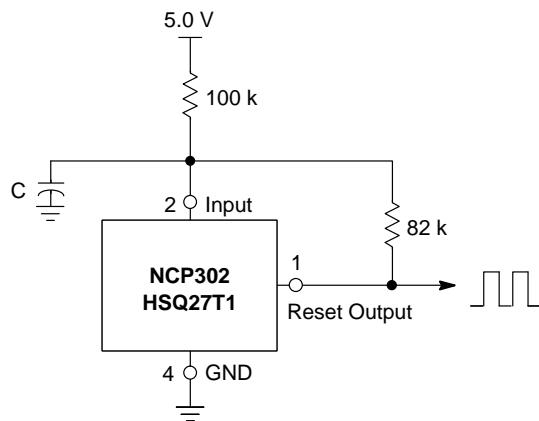

$$V_{th} = \left( \frac{R_H}{R_{in}} + 1 \right) (V_{DET-})$$

$V_{in}$  Increasing:

$$V_{th} = \left( \frac{R_H}{R_{in} \parallel R_L} + 1 \right) (V_{DET-} + V_{HYS})$$

$$V_{HYS} = V_{in} \text{ Increasing} - V_{in} \text{ Decreasing}$$

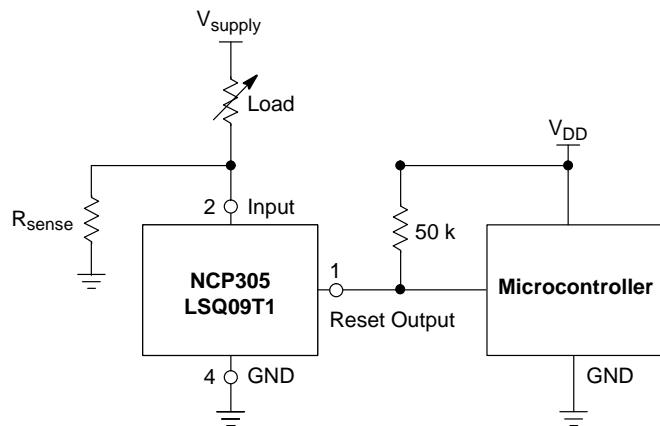

Test Data				
$V_{th}$ Decreasing (mV)	$V_{th}$ Increasing (mV)	$V_{HYS}$ (mV)	$R_H$ ( $\Omega$ )	$R_L$ ( $k\Omega$ )
2.70	2.84	0.135	0	-

1.0	52	22.07

Figure 30. Simple Clock Oscillator

## NCP304, NCP305

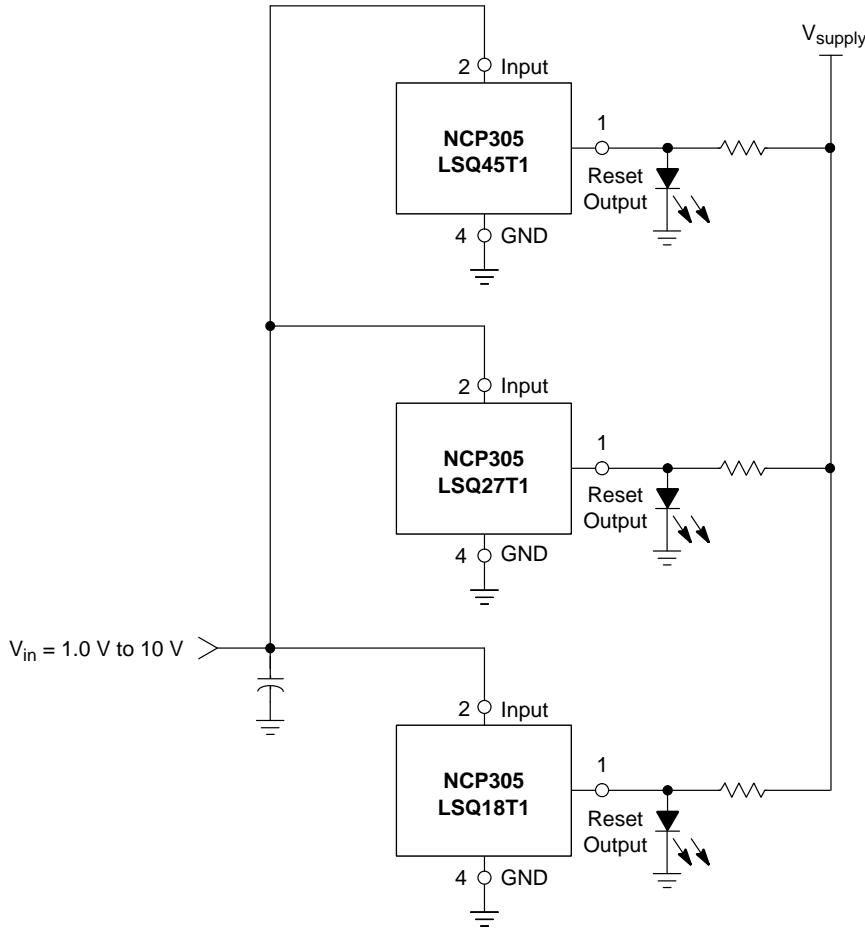

This circuit monitors the current at the load. As current flows through the load, a voltage drop with respect to ground appears across  $R_{\text{sense}}$  where  $V_{\text{sense}} = I_{\text{load}} * R_{\text{sense}}$ . The following conditions apply:

If:  
 $I_{\text{load}} < V_{\text{DET}_-} / R_{\text{sense}}$   
 $I_{\text{load}} \geq (V_{\text{DET}_-} + V_{\text{HYS}}) / R_{\text{sense}}$

Then:  
Reset Output = 0 V  
Reset Output =  $V_{\text{DD}}$

Figure 31. Microcontroller Systems Load Sensing

A simple voltage monitor can be constructed by connecting several voltage detectors as shown above. Each LED will sequentially turn on when the respective voltage detector threshold ( $V_{\text{DET}_-} + V_{\text{HYS}}$ ) is exceeded. Note that detector thresholds ( $V_{\text{DET}_-}$ ) that range from 0.9 V to 4.9 V in 100 mV steps can be manufactured.

NCP304LSQ40T1G	4.0			SFY	SC-82AB (Pb-Free)	
NCP304LSQ42T1	4.2			SFU	SC-82AB	
NCP304LSQ42T1G	4.2			SFU	SC-82AB (Pb-Free)	
NCP304LSQ43T1	4.3			SFV	SC-82AB	

NOTE: The ordering information lists standard undervoltage thresholds with active low outputs. Additional active low threshold devices, ranging from 0.9 V to 4.9 V in 100 mV increments and NCP304 active high output devices, ranging from 0.9 V to 4.9 V in 100 mV increments can be manufactured. Contact your ON Semiconductor representative for availability. The electrical characteristics of these additional devices are shown in Tables 1 and 2.

<sup>†</sup>For information on tape and reel specifications, including part orientation and tape sizes, please refer to our Tape and Reel Packaging Specifications Brochure, BRD8011/D.

\*NCV prefix for automotive and other applications requiring site and control changes.

NCVxxx: T<sub>low</sub> = -40°C, T<sub>high</sub> = +125°C. Guaranteed by design.

# NCP304, NCP305

## PACKAGE DIMENSIONS

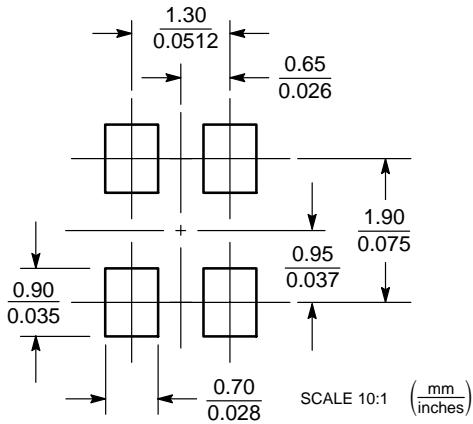

**SC-82AB  
SQ SUFFIX  
CASE 419C-02  
ISSUE E**

- NOTES:
1. DIMENSIONING AND TOLERANCING PER ANSI Y14.5M, 1982.
  2. CONTROLLING DIMENSION: MILLIMETER.
  3. 419C-01 OBSOLETE. NEW STANDARD IS 419C-02.
  4. DIMENSIONS A AND B DO NOT INCLUDE MOLD FLASH, PROTRUSIONS, OR GATE BURRS.

DIM	MILLIMETERS		INCHES	
	MIN	MAX	MIN	MAX
A	1.8	2.2	0.071	0.087
B	1.15	1.35	0.045	0.053
C	0.8	1.1	0.031	0.043
D	0.2	0.4	0.008	0.016
F	0.3	0.5	0.012	0.020
