Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore (\_), the underscore (\_) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (\_). Please check the ON Semiconductor website to verify the updated device numbers. The most current and up-to-date ordering information can be found at <a href="www.onsemi.com">www.onsemi.com</a>. Please email any questions regarding the system integration to Fairchild <a href="guestions@onsemi.com">guestions@onsemi.com</a>.

Notes: 1.  $R_{0,LA}$  is determined with the device mounted on a 1 in<sup>2</sup> 2 oz. copper pad on a 1.5 x 1.5 in. board of FR-4 material. The thermal resistance from the junction to the circuit board side of the solder ball,  $R_{0,UB}$ , is defined for reference. For  $R_{0,UC}$ , the thermal reference point for the case is defined as the top surface of the copper chip carrier.  $R_{0,UC}$  and  $R_{0,UB}$  are guaranteed by design while  $R_{0,UA}$  is determined by the user's board design.
