

# NCP720

## 350mA, Very Low Dropout Bias Rail CMOS Voltage Regulator

The NCP720 is a 350 mA VLDO equipped with NMOS pass transistor and a separate bias supply voltage ( $V_{BIAS}$ ). The device provides very stable, accurate output voltage with low noise suitable for space constrained, noise sensitive applications. In order to optimize performance for battery operated portable applications, the NCP720 features low  $I_Q$  consumption. The WDFN6 2 mm x 2 mm package is optimized for use in space constrained applications.

### Features

- Input Voltage Range: 0.8 V to 5.5 V
- Bias Voltage Range: 2.4 V to 5.5 V
- Fixed Output Voltage Device
- Output Voltage Range: 0.8 V to 2.1 V
- $\pm 2\%$  Accuracy over Temperature
- Ultra-Low Dropout: 110 mV typically at 350 mA
- Very Low Bias Input Current of Typ. 80  $\mu$ A
- Very Low Bias Input Current in Disable Mode: Typ. 0.5  $\mu$ A
- Low Noise, High PSRR
- Built-In Soft-Start with Monotonic  $V_{OUT}$  Rise
- Stable with a 2.2  $\mu$ F Ceramic Capacitor
- Available in WDFN6 – 2 mm x 2 mm Package
- These are Pb-Free Devices

### Typical Applications

- Battery-powered Equipment
- Smartphones, Tablets
- Cameras, DVRs, STB and Camcorders

Figure 2. Simplified Schematic Block Diagram

## PIN FUNCTION DESCRIPTION

| Pin No. | Pin Name | Description  |
|---------|----------|--|
| 1       | OUT      | Regulated Output Voltage pin   |
| 2       | N/C      | Not internally connected   |
| 3       | EN       | Enable pin. Driving this pin high enables the regulator. Driving this pin low puts the regulator into shutdown mode. |
| 4       | BIAS     | Bias voltage supply for internal control circuits. This pin is monitored by internal Under-Voltage Lockout Circuit.  |
| 5       | GND      | Ground pin   |
| 6       | IN       | Input Voltage Supply pin   |
| Pad     |          | Should be soldered to the ground plane for increased thermal performance.  |

## ABSOLUTE MAXIMUM RATINGS

| Rating                                    | Symbol             | Value                         | Unit |
|---|--------------------|-------------------------------|------|
| Input Voltage (Note 1)                    | $V_{IN}$           | -0.3 to 6                     | V    |
| Output Voltage                            | $V_{OUT}$          | -0.3 to $(V_{IN}+0.3) \leq 6$ | V    |
| Chip Enable and Bias Input                | $V_{EN}, V_{BIAS}$ | -0.3 to 6                     | V    |
| Output Short Circuit Duration             | $t_{SC}$           | unlimited                     | s    |
| Maximum Junction Temperature              | $T_J$              | 150                           | °C   |
| Storage Temperature                       | $T_{STG}$          | -55 to 150                    | °C   |
| ESD Capability, Human Body Model (Note 2) | $ESD_{HBM}$        | 2000                          | V    |
| ESD Capability, Machine Model (Note 2)    | $ESD_{MM}$         | 200                           | V    |

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

1. Refer to ELECTRICAL CHARACTERISTICS and APPLICATION INFORMATION for Safe Operating Area.
2. This device series incorporates ESD protection (except OUT pin) and is tested by the following methods:  
 ESD Human Body Model tested per EIA/JESD22-A114  
 ESD Machine Model tested per EIA/JESD22-A115  
 Latchup Current Maximum Rating tested per JEDEC standard: JESD78.

## THERMAL CHARACTERISTICS

| Rating  | Symbol          | Value | Unit |
|---|-----------------|-------|------|
| Thermal Characteristics, WDFN6 2 mm x 2 mm Thermal Resistance, Junction-to-Air (Note 3) | $R_{\theta JA}$ | 65    | °C/W |

3. This data was derived by thermal simulations based on the JEDEC JESD51 series standards methodology. Only a single device mounted at the center of a high-K (2s2p) 3in x 3in multilayer board with 1-ounce internal planes and 2-ounce copper on top and bottom. Top copper layer has a dedicated 125 sqmm copper area.

# NCP720

## ELECTRICAL CHARACTERISTICS

Over Operating Temperature Range ( $T_J = -40^\circ\text{C}$  to  $+125^\circ\text{C}$ ),  $V_{BIAS} = (V_{OUT} + 1.4\text{ V})$  or  $2.5\text{ V}$ , whichever is greater;  $V_{IN} \geq V_{OUT} + 0.5\text{ V}$ ,  $I_{OUT} = 1\text{ mA}$ ,  $V_{EN} = 1.1\text{ V}$ ,  $C_{OUT} = 2.2\text{ }\mu\text{F}$ , unless otherwise noted. Typical values are at  $T_J = +25^\circ\text{C}$ .

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

4.  $V_{OUT}$  nominal value is factory programmable.
5. Measured for devices with  $V_{OUT(NOM)} \geq 1.2\text{ V}$ .
6.  $V_{BIAS} - V_{OUT}$  with  $V_{OUT} = V_{OUT(NOM)} - 0.1\text{ V}$ .

## APPLICATIONS INFORMATION

The NCP720 dual-rail very low dropout voltage regulator is using NMOS pass transistor for output voltage regulation from  $V_{IN}$  voltage. All the low current internal control circuitry is powered from the  $V_{BIAS}$  voltage.

The use of an NMOS pass transistor offers several advantages in applications. Unlike a PMOS topology devices, the output capacitor has reduced impact on loop stability.  $V_{IN}$  to  $V_{OUT}$  operating voltage difference can be very low compared with standard PMOS regulators in very low  $V_{IN}$  applications.

The NCP720 offers built-in Soft-Start with monotonic  $V_{OUT}$  rise. The controlled voltage rising limits the inrush current.

The Enable (EN) input is equipped with internal hysteresis.

NCP720 is a Fixed Voltage linear regulator.

### Dropout Voltage

Because of two power supply inputs  $V_{IN}$  and  $V_{BIAS}$  and one  $V_{OUT}$  regulator output, there are two Dropout voltages specified.

The first, the  $V_{IN}$  Dropout voltage is the voltage difference ( $V_{IN} - V_{OUT}$ ) at which the regulator output no longer maintains regulation against further reductions in input voltage.  $V_{BIAS}$  is high enough, specific value is published in the Electrical Characteristics table.

The second,  $V_{BIAS}$  dropout voltage is the voltage difference ( $V_{BIAS} - V_{OUT}$ ) at which the regulator output no longer maintains regulation against further reductions in  $V_{BIAS}$  voltage.  $V_{IN}$  is high enough.

### Input and Output Capacitors

The device is designed to be stable for ceramic output capacitors with Effective capacitance in the range from 2.2  $\mu\text{F}$  to 10  $\mu\text{F}$ . The device is also stable with multiple capacitors in parallel, having the total effective capacitance in the specified range.

In applications where no low input supplies impedance available (PCB inductance in  $V_{IN}$  and/or  $V_{BIAS}$  inputs as

example), the recommended  $C_{IN} = 1 \mu\text{F}$  and  $C_{BIAS} = 0.1 \mu\text{F}$  or greater. Ceramic capacitors are recommended. For the best performance all the capacitors should be connected to the NCP720 respective pins directly in the device PCB copper layer, not through vias having not negligible impedance.

When using small ceramic capacitor, their capacitance is not constant but varies with applied DC biasing voltage, temperature and tolerance. The effective capacitance can be much lower than their nominal capacitance value, most importantly in negative temperatures and higher LDO output voltages. That is why the recommended Output capacitor capacitance value is specified as Effective value in the specific application conditions.

### Enable Operation

The enable pin will turn the regulator on or off. The threshold limits are covered in the electrical characteristics table in this data sheet. If the enable function is not to be used then the pin should be connected to  $V_{IN}$  or  $V_{BIAS}$ . When enabled, the device consumes roughly 20  $\mu\text{A}$  from  $V_{IN}$  supply per 1 V nominal output voltage. That is why using the enable / disable function in power saving applications is recommended.

### Current Limitation

The internal Current Limitation circuitry allows the device to supply the full nominal current and surges but protects the device against Current Overload or Short.

### Thermal Protection

Internal thermal shutdown (TSD) circuitry is provided to protect the integrated circuit in the event that the maximum junction temperature is exceeded. When TSD activated, the regulator output turns off. When cooling down under the low temperature threshold, device output is activated again. This TSD feature is provided to prevent failures from accidental overheating.

# NCP720

## ORDERING INFORMATION

| Device          | Nominal Output Voltage | Marking | Package            | Shipping <sup>†</sup> |
|-----------------|------------------------|---------|--------------------|-----------------------|
