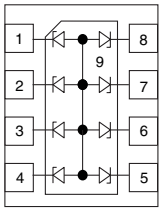
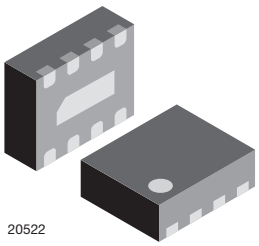
8-Line ESD Protection Diode Array in LLP1713-9L



20521



20522

FEATURES

- Ultra compact LLP1713-9L package
- Low package profile < 0.6 mm
- 8-line ESD protection
- Low leakage current I_R < 0.5 µA
- Low load capacitance C_D = 20 pF
- ESD immunity acc. IEC 61000-4-2
  ± 17 kV contact discharge
  ± 17 kV air discharge
- Working voltage range V_{RWM} = 5 V
- e4 - precious metal (e.g. Ag, Au, NiPd, NiPdAu) (no Sn)
- Material categorization: for definitions of compliance please see www.vishay.com/doc?99912

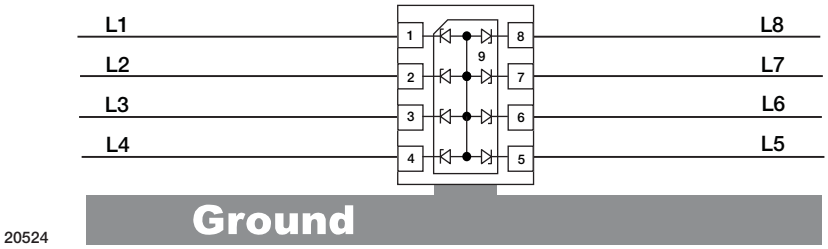
BiAs-MODE (8-line bidirectional asymmetrical protection mode)

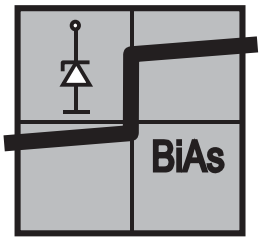
With the VESD05A8B-HNH up to 8 signal- or data-lines (L1 to L8) can be protected against voltage transients. With pin 9 connected to ground and pin 1 up to pin 8 connected to a signal- or data-line which has to be protected. As long as the voltage level on the data- or signal-line is between 0 V (ground level) and the specified maximum reverse working voltage (V_{RWM}) the protection diode between data line and ground offer a high isolation to the ground line. The protection device behaves like an open switch.

As soon as any positive transient voltage signal exceeds the break through voltage level of the protection diode, the diode becomes conductive and shorts the transient current to ground. Now the protection device behaves like a closed switch. The clamping voltage (V_C) is defined by the breakthrough voltage (V_{BR}) level plus the voltage drop at the series impedance (resistance and inductance) of the protection device.

Any negative transient signal will be clamped accordingly. The negative transient current is flowing in the forward direction of the protection diode. The low forward voltage (V_F) clamps the negative transient close to the ground level.

Due to the different clamping levels in forward and reverse direction the VESD05A8B-HNH clamping behaviour is bidirectional and asymmetrical (BiAs).





ELECTRICAL CHARACTERISTICS VESD05A8B-HNH (Between pin 1 to 8, and pin 9) (T_{amb} = 25 °C, unless otherwise specified)						
PARAMETER	**TEST CONDITIONS/REMARKS**	**SYMBOL**	**MIN.**	**TYP.**	**MAX.**	**UNIT**
Protection paths	Number of lines which can be protected	$N_{channel}$	-	-	8	lines
Reverse stand-off voltage	Max. reverse working voltage	V_{RWM}	-	-	5	V
Reverse voltage	at I_R = 0.5 µA	V_R	5	-	-	V
Reverse current	at $V_R = V_{RWM}$ = 5 V	I_R	-		0.5	µA
Reverse breakdown voltage	at I_R = 1 mA	V_{BR}	6		8	V
Reverse clamping voltage	at I_{PP} = 4 A acc. IEC 61000-4-5	V_C	-		13	V
Forward clamping voltage	at I_F = 4 A acc. IEC 61000-4-5	V_F	-		4.5	V
Capacitance	at V_R = 0 V; f = 1 MHz	C_D	-	20	23	pF
	at V_R = 2.5 V; f = 1 MHz	C_D	-	12	14	pF

If a higher surge current or peak pulse current (I_{PP}) is needed, some protection diodes in the VESD05A8B-HNH can also be used in parallel in order to "multiply" the performance. If two diodes are switched in parallel you get

- double surge power = double peak pulse current (2 x I_{PPM})
- half of the line inductance = reduced clamping voltage
- half of the line resistance = reduced clamping voltage
- double line capacitance (2 x C_D)
- double reverse leakage current (2 x I_R)

BiSy-MODE (7-line bidirectional symmetrical protection mode)

If a bipolar symmetrical protection device is needed the VESD05A8B-HNH can also be used as a seven-line protection device. Therefore seven pins (example: pin 1, 2, 3, 4, 6, 7 and 8) has to be connected to the signal or data-line (L1 to L7) and pin 5 to ground. Pin 9 must not be connected!

Positive and negative voltage transients will be clamped in the same way. The clamping current from one data line through the VESD05A8B-HNH to the ground passes one diode in forward direction and the other one in reverse direction. The clamping voltage (V_C) is defined by the breakthrough voltage (V_{BR}) level of one diode plus the forward voltage of the other diode plus the voltage drop at the series impedances (resistances and inductances) of the protection device.

Due to the same clamping levels in positive and negative direction the VESD05A8B-HNH voltage clamping behaviour is also bidirectional and symmetrical (BiSy).
