LMV331, LMV393, LMV339

General-purpose low voltage comparators

Features

- ■ Supply operation from 2.7 to 5 V
- ■ Low current consumption: 20 μA
- ■ Input common mode range includes ground
- ■ Wide temperature range: -40°C to +85°C
- ■ Low output saturation voltage
- ■ Propagation delay: 200 ns
- ■ Open drain output
- ■ ESD tolerance: 2 kV HBM / 200 V MM
- ■ SMD packages

Applications

- ■ Mobile phones
- ■ Notebooks and PDAs
- ■ Battery supplied electronics
- ■ General-purpose portable devices
- ■ General-purpose low voltage applications

Description

The LMV331, LMV393 and LMV339 are the single/dual/quad and low voltage versions of the industry standard LM339 and LM393. They can operate with a supply voltage ranging from 2.7 to 5 V, and exhibit a lower current consumption than their predecessors LM339 and LM393. These devices are a perfect choice for low-voltage applications.

The LMV3xx are available in tiny packages, making them ideal for applications where space saving is a constraint.

LMV331
SOT23-5 / SC70-5

LMV393
SO-8 / MiniSO-8

LMV339
SO14 / TSSOP14
The devices are designed to operate in the temperature range of -40°C to +85°C and are suitable for a variety of applications.

	Machine model (MM)[4]	200	
	Charged device model (CDM)[5]	1500	
	Latch-up immunity	200	mA

1. All voltage values, except the differential voltage, are referenced to V_{cc}-.

2. Short-circuits can cause excessive heating. These values are typical.

3. Human body model: a 100 pF capacitor is charged to the specified voltage, then discharged through a 1.5 kΩ resistor between two pins of the device. This is done for all couples of connected pin combinations while the other pins are floating.

4. Machine model: a 200 pF capacitor is charged to the specified voltage, then discharged directly between two pins of the device with no external series resistor (internal resistor < 5 Ω). This is done for all couples of connected pin combinations while the other pins are floating.

5. Charged device model: all pins and package are charged together to the specified voltage and then discharged directly to ground through only one pin. This is done for all pins.
