A gadget designed to inspire people to play with Atmel development kits and have fun.

This kit can be combined with a number of Atmel kits to form a basic robot. (This kit contains the basic mechanical parts - an additional kit is required for the control unit)

It is easy to add sensors and other stuff to the basic Abot to form more advanced robots.

A common protocol enables communication between all future Abot combinations.

You can meet Mr. Abot at Atmel Spaces where you will find projects using Abot in combination with Atmel development kits.

There is more work to do on the library and an endless amount of possible projects - if you want to contribute please join Atmel Spaces (Atmel.com - Design Support - Communities)

Please note that although care has been taken in the degree of relevancy, pictures are for display purposes only, and product appearance may differ from what you see. If there are any discrepancies between the product headline, description and picture, the correct information will be in the product headline (i.e. computer systems may not come with monitors even if pictured that way). If anything is unclear, please email support before placing your order.
