RE46C104

Piezoelectric Horn Driver and Voltage Converter
Product Specification

General Description

The RE46C104 is a piezoelectric horn driver with voltage converter to provide maximum audibility in low voltage applications. The feedback control pin is designed for use with self-oscillating piezoelectric horn but can also be used in direct drive applications. The built-in charge pump voltage converter provides increased supply voltage for the horn drivers allowing outputs to swing from Vss to 2 x Vdd. A charge pump enable pin is provided to minimize supply current when not in use.
Applications

Smoke detectors
CO Detectors
Personal Security Products
Electronic Toys

Features

- Low Quiescent Current
- Low Driver Ron
- Wide Operating Voltage Range
- Available in Standard Packaging or RoHS Compliant Pb Free Packaging

Pin Configuration

N/C	1	N/C
FEED		Vdd
CAP-		CPMPEN
Vss		HORNS
CAP+		HORNB
HRNEN		VPOS
N/C	14	N/C

Absolute maximum ratings

Supply Voltage V_{dd} ......…………………………….......-.5V to +9.0V

Input voltage Range V_{in} ...…………………………….......... -.3V to V_{DD}+.3V, except FEED

FEED Input Voltage Range Vinf …………………………...… -10V to +22V

Input Current I_{in} ....……………………………….......... 10mA, except FEED

Operating Temperature ......…………………………………….. 0 to 50°C

Continuous Output Current (HornS, HornB, or Vpos)…..…….. 30mA

Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only and operation at these conditions for extended periods may affect device reliability.

This product utilizes CMOS technology with static protection; however proper ESD prevention procedures should be used when handling this product. Damage can occur when exposed to extremely high static electrical charges

Electrical Characteristics at T_A = 25°C, V_{DD} = 5V, V_{SS} = 0V (unless otherwise noted).

1/ The supply current specification is an average under steady state conditions.
The instantaneous current will exceed this value when C1 and C2 charge-up initially (after charge pump is enabled) and during subsequent recharging of C1 and C2.
