### E1081

#### Description:

The E1081 evaluation kit contains a motherboard and a removable eight button keypad PCB. The E1081 demonstrates the features of the QT1081 device, such as eight - channel touch control, auto recalibration, stuck key detect and Adjacent Key Suppression (AKS™). Removing the keypad allows connection to your own electrodes. The download table, below, provides a link to the user manual and a schematic diagram of the evaluation board. The kit includes the boards and 2 additional QT1081 ICs
