DSC8103 DSC8123

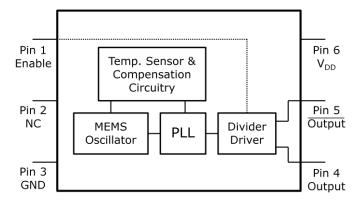

# Programmable Low-Jitter Precision LVDS Oscillator

# **General Description**

The DSC8103 & DSC8123 series of high performance field-programmable oscillators utilizes a proven silicon MEMS technology to provide excellent jitter and stability over a supply wide range of voltages and temperatures. Using the TIMEFLASH programmer, the end user can easily program the oscillators' frequency in the field for immediate testing or use in advance prototype development or production.

DSC8103 has a standby feature allowing it to completely power-down when EN pin is pulled low; whereas for DSC8123, only the outputs are disabled when EN is low. Both oscillators are available in industry standard packages, including the small 3.2x2.5 mm<sup>2</sup>, and are "drop-in" replacement for standard 6-pin LVDS guartz oscillators.

# **Block Diagram**

# **Output Enable Modes**

EN Pin	DSC8103	DSC8123
High	Outputs Active	Outputs Active
NC	Outputs Active	Outputs Active
Low	Standby	Outputs Disabled

## **Features**

- Low RMS Phase Jitter: <1 ps (typ)
- High Stability: ±10, ±25, ±50 ppm
- Wide Temperature Range Industrial: -40° to 85° C Ext. commercial: -20° to 70° C
- High Supply Noise Rejection: -50 dBc
- Short Lead Time: 2 Weeks
- Wide Freq. Range: 10 to 460 MHz
- Small Industry Standard Footprints o 2.5x2.0, 3.2x2.5, 5.0x3.2, & 7.0x5.0 mm
- Excellent Shock & Vibration Immunity Qualified to MIL-STD-883
- High Reliability 20x better MTF than guartz oscillators
- Low Current Consumption
- Supply Range of 2.25 to 3.6 V
- Standby & Output Enable Function
- Lead Free & RoHS Compliant
- LVPECL & HCSL Versions Available

# **Applications**

- Storage Area Networks SATA, SAS, Fibre Channel
- Passive Optical Networks o EPON, 10G-EPON, GPON, 10G-PON
- Ethernet 1G, 10GBASE-T/KR/LR/SR, and FCoE
- HD/SD/SDI Video & Surveillance
- PCI Express: Gen 1 & Gen 2
- DisplayPort

Notes: 1.

Pin 6  $V_{DD}$  should be filtered with 0.1uf capacitor.

 $t_{su}$  is time to 100ppm of output frequency after V<sub>DD</sub> is applied and outputs are enabled. 2.

3. Output Waveform and Test Circuit figures below define the parameters.

Output is enabled if pad is floated or not connected. 4.
