RN-USB-SERIAL

? REQUEST INFO

DESCRIPTION

The USB to Serial Bridge Converter is a low-cost, high-performance device. It operates as a bridge and provides single and easy connectivity between one USB port and serial ports. Each serial port can be independently configured into various synchronous and asynchronous interfaces. Users will have option to execute serial devices at the same time.

The device is designed to be compliant with a variety of applications, including COM port and other devices with serial ports.

RESOURCES

Certifications
• European Union's REACH Regulation Declaration (PDF)

Application Notes
• COM port reset app note (PDF)

Data Sheets
• RN-USB-SERIAL (PDF)
