Share

The CoaXPress (CXP) machine vision standard uses asymmetric data transmission over Coax cables - with speeds of up to 6.2Gbit/s from the camera and up to 20Mbit/s control data from the frame grabber to the camera. Microchip offers fully qualified board-sets (transmitter and receiver) as an evaluation and development tool to aid to customers in rapid CXP adoption.

Features

- Supports speeds of up to 6.2Gbit/s
- Enables high speed signal transmission up to 100m (depending on cable quality)
