93AA66A/B/C, 93LC66A/B/C, 93C66A/B/C

4-Kbit Microwire Compatible Serial EEPROM

Device Selection Table

Part Number	Vcc Range	ORG Pin	Word Size	Temperature Ranges	Packages
93AA66A	1.8V-5.5V	No	8-bit	I	MC, MS, P, SN, OT, MN,ST
93AA66B	1.8V-5-5V	No	16-bit	I	MC, MS, P, SN, OT, MN,ST
93LC66A	2.5V-5.5V	No	8-bit	I, E	MC, MS, P, SN, OT, MN,ST
93LC66B	2.5V-5.5V	No	16-bit	I, E	MC, MS, P, SN, OT, MN,ST
93C66A	4.5V-5.5V	No	8-bit	I, E	MC, MS, P, SN, OT, MN,ST
93C66B	4.5V-5.5V	No	16-bit	I, E	MC, MS, P, SN, OT, MN,ST
93AA66C	1.8V-5.5V	Yes	8-bit or 16-bit	I	MC, MS, P, SN, MN, ST
93LC66C	2.5V-5.5V	Yes	8-bit or 16-bit	I, E	MC, MS, P, SN, MN, ST
93C66C	4.5V-5.5V	Yes	8-bit or 16-bit	I, E	MC, MS, P, SN, MN, ST

Features

- Low-Power CMOS Technology
- ORG Pin to Select Word Size for ‘66C’ Version
- 512 x 8-bit Organization ‘A’ Devices (no ORG)
- 256 x 16-bit organization ‘B’ Devices (no ORG)
- Self-tImed Erase/Write Cycles (including Auto-Erase)
- Automatic Erase All (ERAL) Before Write All (WRAL)
- Power-On/Off Data Protection Circuitry
- Industry Standard Three-Wire Serial I/O
- Device Status Signal (Ready/$\overline{\text{Busy}}$)
- Sequential Read Function
- High Reliability:
  - Endurance: 1,000,000 erase/write cycles
  - Data retention: > 200 years
  - ESD protection: > 4000V
- RoHS Compliant
- Temperature Ranges Supported:
  - Industrial (I) -40°C to +85°C
  - Extended (E) -40°C to +125°C
- Automotive AEC-Q100 Qualified

Packages

- 8-Lead DFN, 8-Lead MSOP, 8-Lead PDIP, 8-Lead SOIC, 6-Lead SOT-23, 8-Lead TDFN, 8-Lead TSSOP

Pin Function Table

Name	Function
CS	Chip Select
CLK	Serial Data Clock
DI	Serial Data Input
DO	Serial Data Output
Vss	Ground
NC	No internal connection
ORG	Memory Configuration
Vcc	Power Supply

Description

The Microchip Technology Inc. 93XX66A/B/C devices are 4-Kbit low-voltage serial Electrically Erasable PROMs (EEPROM). Word-selectable devices such as the 93AA66C, 93LC66C or 93C66C are dependent upon external logic levels driving the ORG pin to set word size. For dedicated 8-bit communication, the 93XX66A devices are available, while the 93XX66B devices provide dedicated 16-bit communication. Advanced CMOS technology makes these devices ideal for low-power, nonvolatile memory applications.

1.0 ELECTRICAL CHARACTERISTICS

Absolute Maximum Ratings(†)

VCC.....7.0V

All inputs and outputs w.r.t. VSS .....-0.6V to VCC +1.0V

Storage temperature .....-65°C to +150°C

Ambient temperature with power applied.....-40°C to +125°C

ESD protection on all pins .....≥ 4 kV

† **NOTICE:** Stresses above those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operational listings of this specification is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability.

TABLE 1-1: DC CHTARACTERISTICS

All parameters apply over the specified ranges unless otherwise noted.			**Industrial (I): TA = -40°C to +85°C, VCC = +1.8V to +5.5V** **Extended (E): TA = -40°C to +125°C, VCC = +2.5V to +5.5V**

2.0 FUNCTIONAL DESCRIPTION

When the ORG pin is connected to VCC, the (x16) organization is selected. When it is connected to ground, the (x8) organization is selected. Instructions, addresses and write data are clocked into the DI pin on the rising edge of the clock (CLK). The DO pin is normally held in a High-Z state except when reading data from the device, or when checking the Ready/Busy status during a programming operation. The Ready/Busy status can be verified during an Erase/Write operation by polling the DO pin; DO low indicates that programming is still in progress, while DO high indicates the device is ready. DO will enter the High-Z state on the falling edge of CS.

2.1 Start Condition

The Start bit is detected by the device if CS and DI are both high with respect to the positive edge of CLK for the first time.

Before a Start condition is detected, CS, CLK and DI may change in any combination (except to that of a Start condition), without resulting in any device operation (Read, Write, Erase, EWEN, EWDS, ERAL or WRAL). As soon as CS is high, the device is no longer in Standby mode.

An instruction following a Start condition will only be executed if the required opcode, address and data bits for any particular instruction are clocked in.

Note:	When preparing to transmit an instruction, either the CLK or DI signal levels must be at a logic low as CS is toggled active high.

2.2 Data In/Data Out (DI/DO)

It is possible to connect the Data In and Data Out pins together. However, with this configuration it is possible for a “bus conflict” to occur during the “dummy zero” that precedes the read operation, if A0 is a logic high level. Under such a condition the voltage level seen at Data Out is undefined and will depend upon the relative impedances of Data Out and the signal source driving A0. The higher the current sourcing capability of A0, the higher the voltage at the Data Out pin. In order to limit this current, a resistor should be connected between DI and DO.

2.3 Data Protection

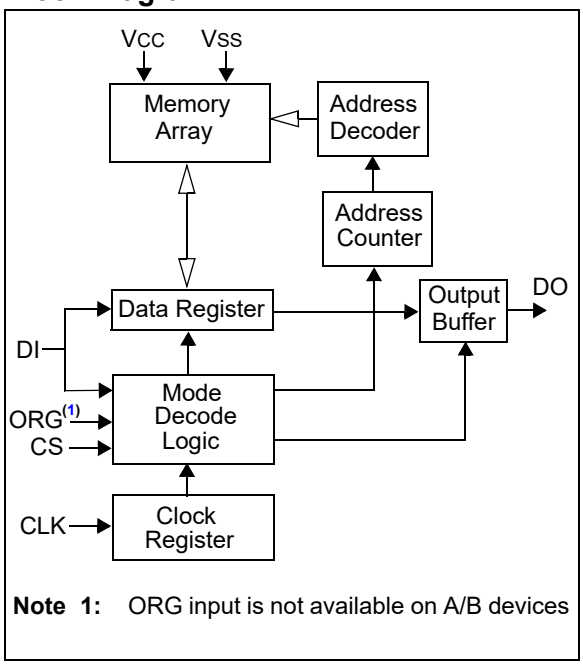
All modes of operation are inhibited when VCC is below a typical voltage of 1.5V for ‘93AA’ and ‘93LC’ devices or 3.8V for ‘93C’ devices.

The EWEN and EWDS commands give additional protection against accidentally programming during normal operation.

Note:	For added protection, an EWDS command should be performed after every write operation and an external 10 kΩ pulldown protection resistor should be added to the CS pin.

After power-up, the device is automatically in the EWDS mode. Therefore, an EWEN instruction must be performed before the initial ERASE or WRITE instruction can be executed.

Block Diagram



Note 1: ORG input is not available on A/B devices

Downloaded from Arrow.com.

2.4 Erase

The ERASE instruction forces all data bits of the specified address to the logical '1' state. CS is brought low following the loading of the last address bit. This falling edge of the CS pin initiates the self-timed programming cycle, except on '93C' devices where the rising edge of CLK before the last address bit initiates the write cycle.

The DO pin indicates the Ready/$\overline{\text{Busy}}$ status of the device if CS is brought high after a minimum of 250 ns low (TCSL). DO at logical '0' indicates that programming is still in progress. DO at logical '1' indicates that the register at the specified address has been erased and the device is ready for another instruction.

Note: After the Erase cycle is complete, issuing a Start bit and then taking CS low will clear the Ready/Busy status from DO.

FIGURE 2-1: ERASE TIMING FOR 93AA AND 93LC DEVICES

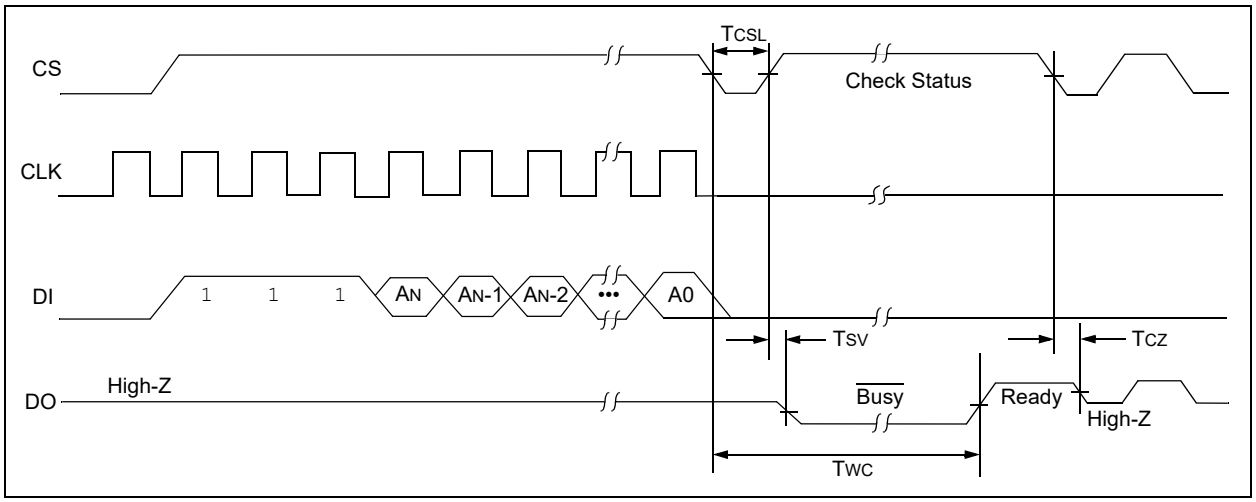


FIGURE 2-2: ERASE TIMING FOR 93C DEVICES

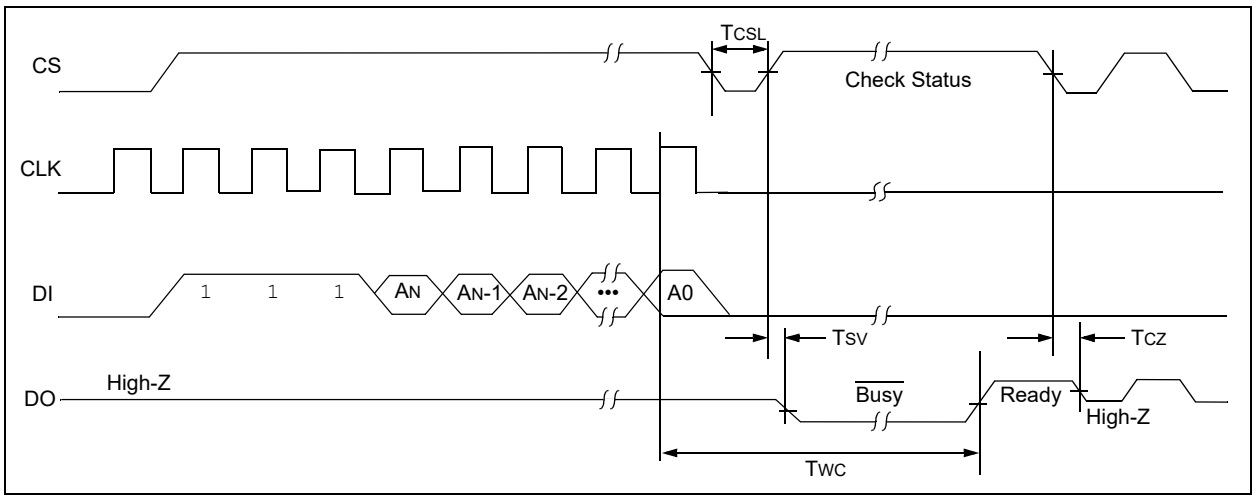

© 2003-2022 Microchip Technology Inc. and its subsidiaries

Downloaded from Arrow.com.

2.5 Erase All (ERAL)

The Erase All (ERAL) instruction will erase the entire memory array to the logical '1' state. The ERAL cycle is identical to the erase cycle, except for the different opcode. The ERAL cycle is completely self-timed and commences at the falling edge of the CS, except on '93C' devices where the rising edge of CLK before the last data bit initiates the write cycle. Clocking of the CLK pin is not necessary after the device has entered the ERAL cycle.

The DO pin indicates the Ready/$\overline{\text{Busy}}$ status of the device, if CS is brought high after a minimum of 250 ns low (T_{CSL}).

Note:	After the ERAL command is complete, issuing a Start bit and then taking CS low will clear the Ready/Busy status from DO.

V_{CC} must be ≥ 4.5V for proper operation of ERAL.

FIGURE 2-3: ERAL TIMING FOR 93AA AND 93LC DEVICES

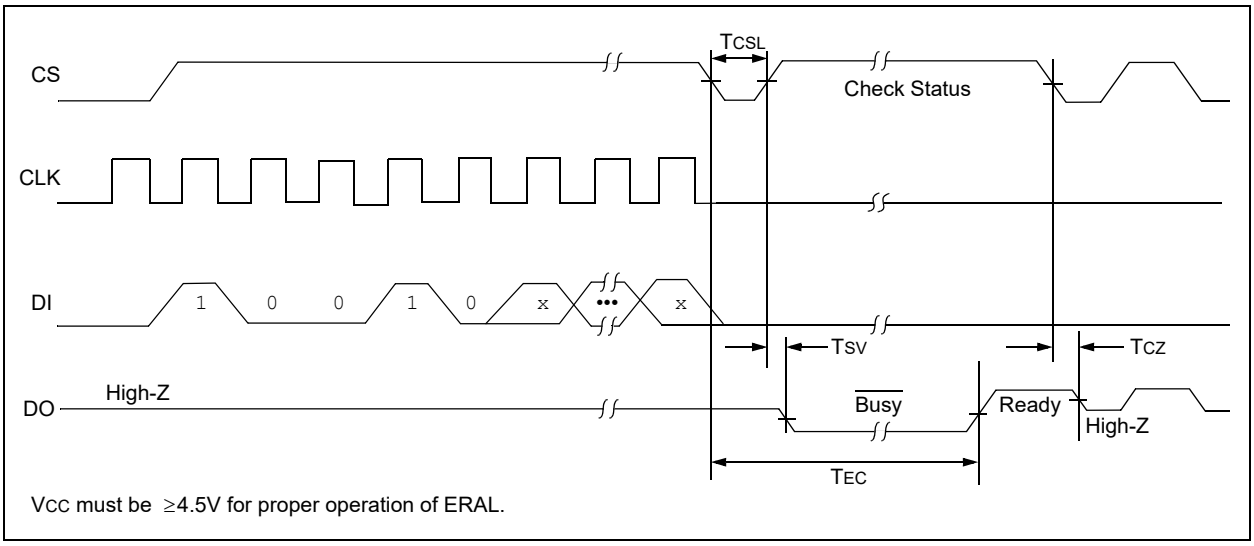

FIGURE 2-4: ERAL TIMING FOR 93C DEVICES

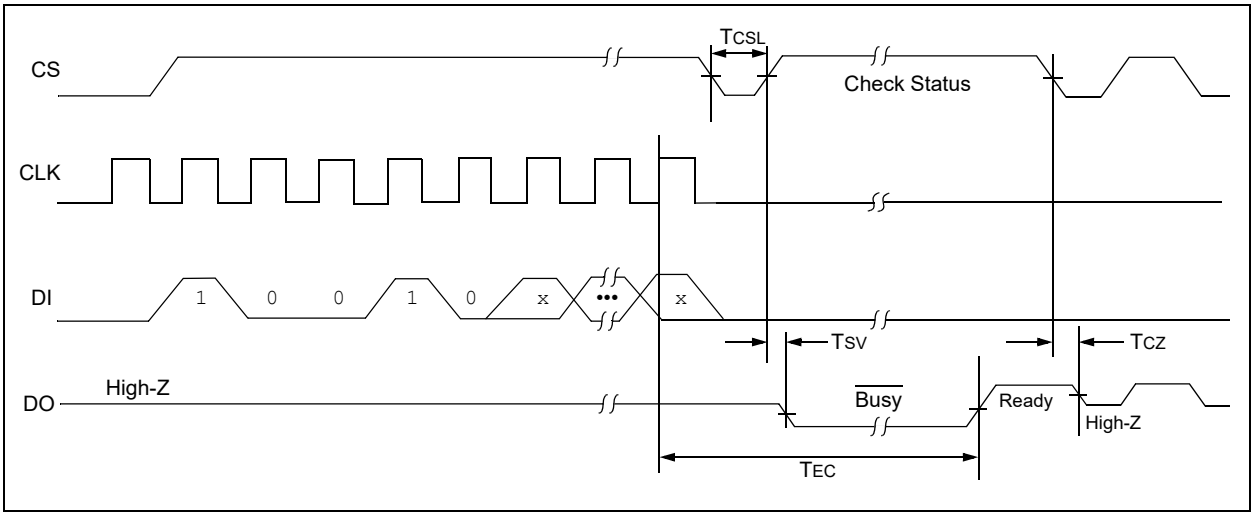

Downloaded from Arrow.com.

2.6 Erase/Write Disable and Enable (EWDS/EWEN)

The 93XX66A/B/C powers up in the Erase/Write Disable (EWDS) state. All Programming modes must be preceded by an Erase/Write Enable (EWEN) instruction.

Once the EWEN instruction is executed, programming remains enabled until an EWDS instruction is executed or Vcc is removed from the device.

To protect against accidental data disturbance, the EWDS instruction can be used to disable all erase/write functions and should follow all programming operations. Execution of a READ instruction is independent of both the EWEN and EWDS instructions.

FIGURE 2-5: EWDS TIMING

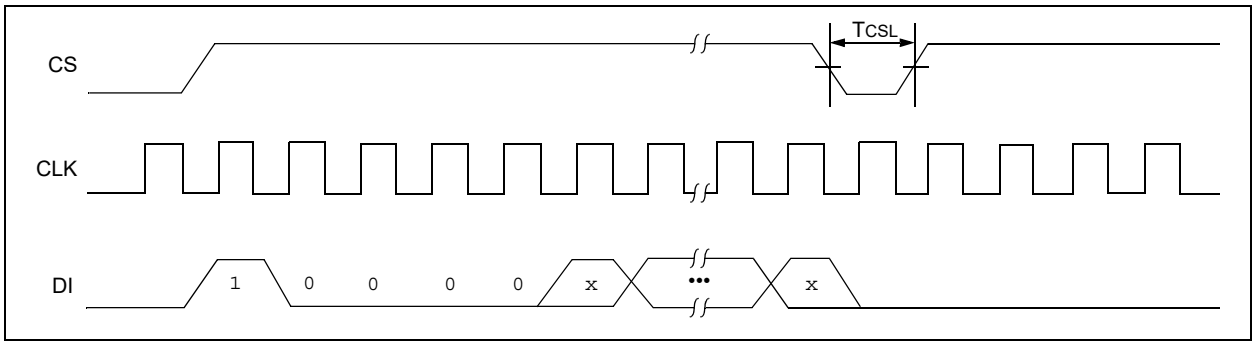

FIGURE 2-6: EWEN TIMING

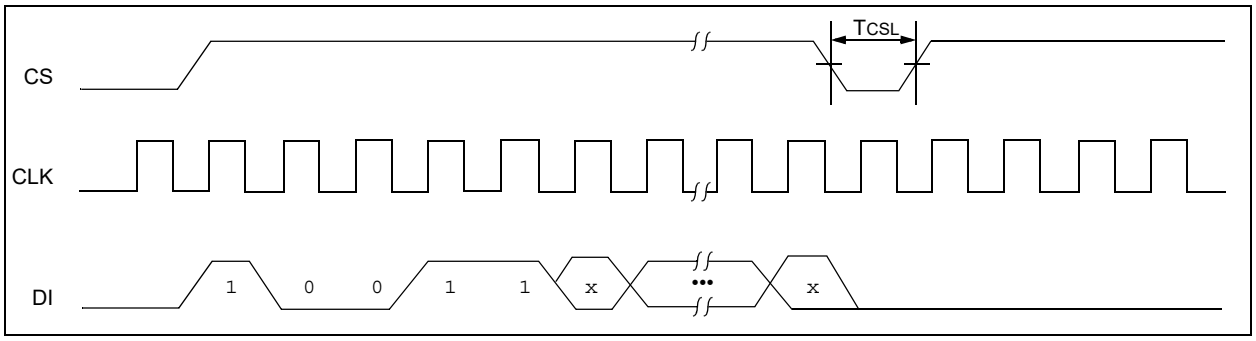


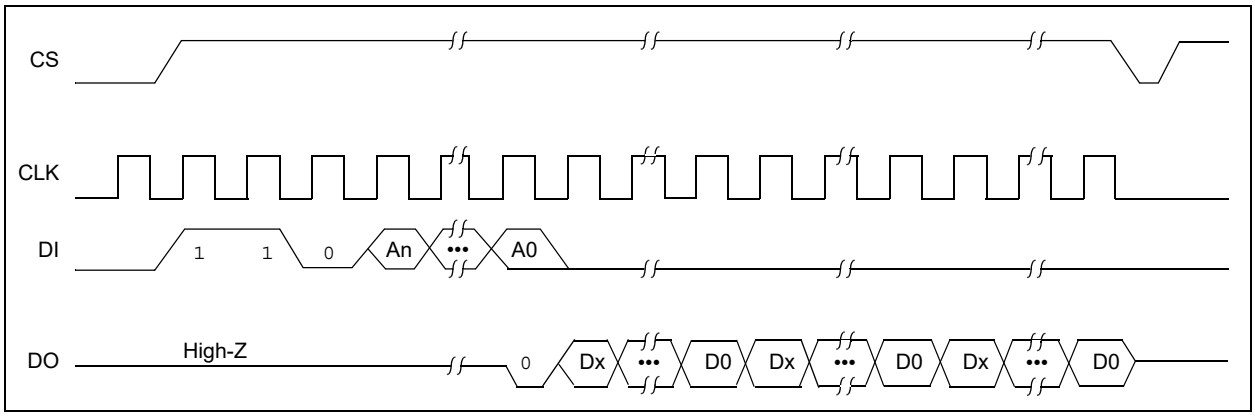
2.7 Read

The READ instruction outputs the serial data of the addressed memory location on the DO pin. A dummy zero bit precedes the 8-bit (If ORG pin is low or A-Version devices) or 16-bit (If ORG pin is high or B-version devices) output string. The output data bits will toggle on the rising edge of the CLK and are stable after the specified time delay (TPD). Sequential read is possible when CS is held high. The memory data will automatically cycle to the next register and output sequentially.

© 2003-2022 Microchip Technology Inc. and its subsidiaries

Downloaded from Arrow.com.

FIGURE 2-7: READ TIMING



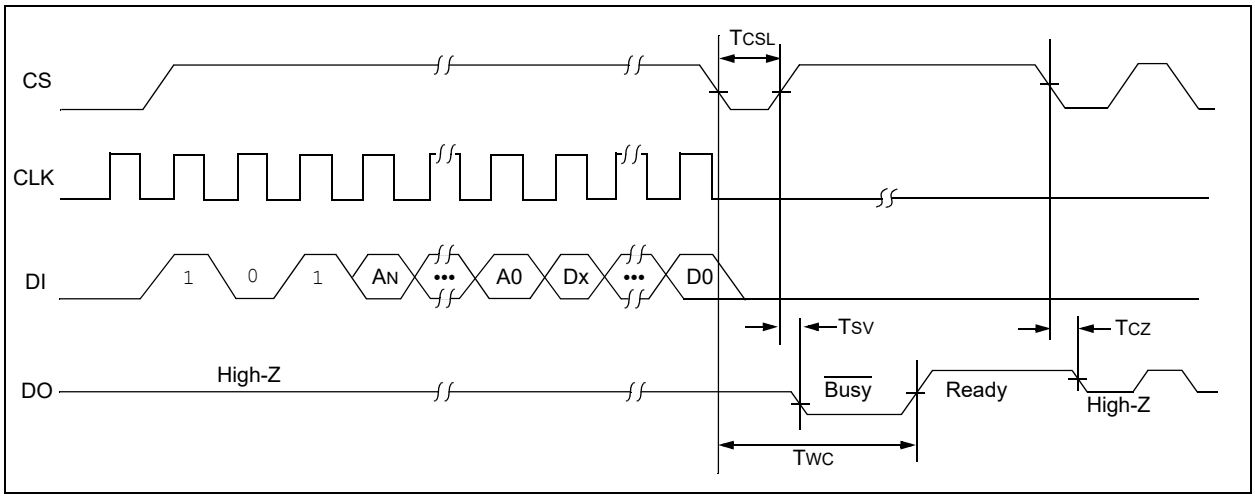
2.8 Write

The WRITE instruction is followed by 8 bits (If ORG is low or A-version devices) or 16 bits (If ORG pin is high or B-version devices) of data which are written into the specified address. For 93AA66A/B/C and 93LC66A/B/C devices, after the last data bit is clocked into DI, the falling edge of CS initiates the self-timed auto-erase and programming cycle. For 93C66A/B/C devices, the self-timed auto-erase and programming cycle is initiated by the rising edge of CLK on the last data bit.

The DO pin indicates the Ready/$\overline{\text{Busy}}$ status of the device, if CS is brought high after a minimum of 250 ns low (T_{CSL}). DO at logical '0' indicates that programming is still in progress. DO at logical '1' indicates that the register at the specified address has been written with the data specified and the device is ready for another instruction.

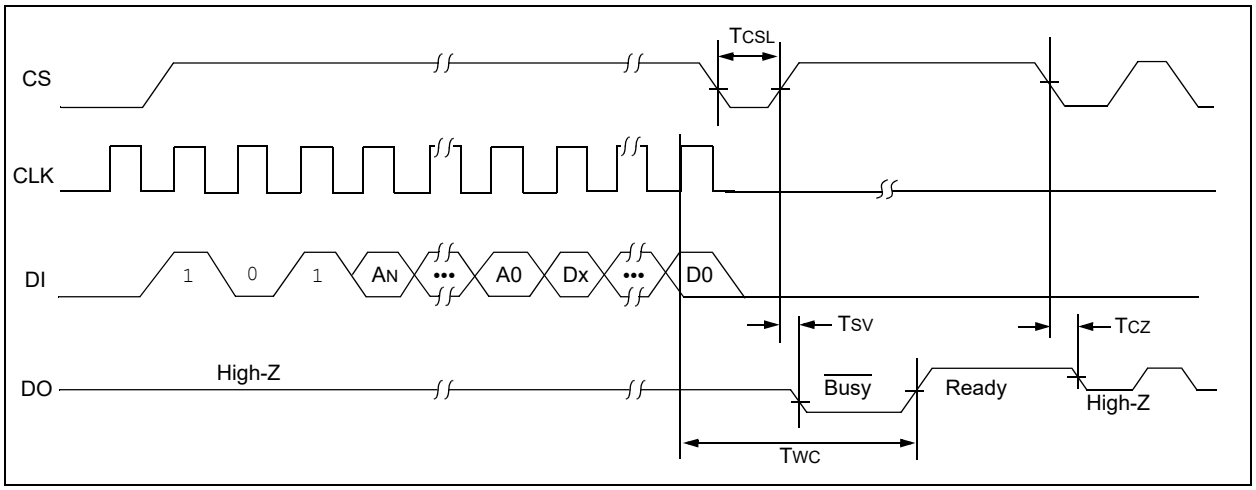
Note:	After the Write cycle is complete, issuing a Start bit and then taking CS low will clear the Ready/Busy status from DO.

FIGURE 2-8: WRITE TIMING FOR 93AA AND 93LC DEVICES



Downloaded from Arrow.com.

FIGURE 2-9: WRITE TIMING FOR 93C DEVICES



© 2003-2022 Microchip Technology Inc. and its subsidiaries

Downloaded from Arrow.com.

2.9 Write All (WRAL)

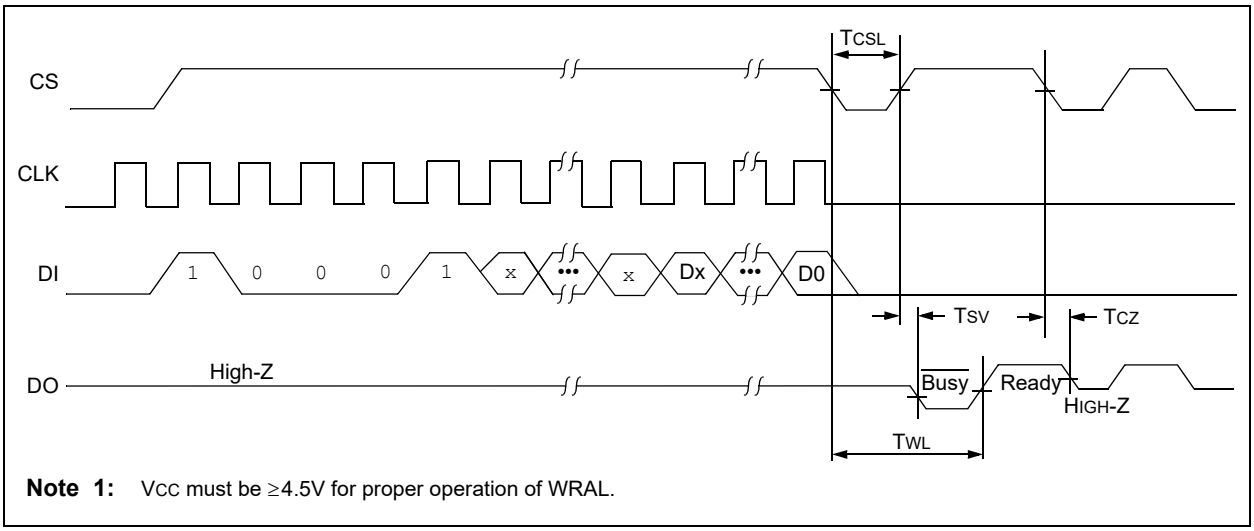
The Write All (WRAL) instruction will write the entire memory array with the data specified in the command. For 93AA66A/B/C and 93LC66A/B/C devices, after the last data bit is clocked into DI, the falling edge of CS initiates the self-timed auto-erase and programming cycle. For 93C66A/B/C devices, the self-timed auto-erase and programming cycle is initiated by the rising edge of CLK on the last data bit. Clocking of the CLK pin is not necessary after the device has entered the WRAL cycle. The WRAL command does include an automatic ERAL cycle for the device. Therefore, the WRAL instruction does not require an ERAL instruction, but the chip must be in the EWEN status.

The DO pin indicates the Ready/$\overline{\text{Busy}}$ status of the device if CS is brought high after a minimum of 250 ns low (T_{CSL}).

Note:	After the Write All cycle is complete, issuing a Start bit and then taking CS low will clear the Ready/Busy status from DO.

V_{CC} must be ≥ 4.5V for proper operation of WRAL.

FIGURE 2-10: WRAL TIMING FOR 93AA AND 93LC DEVICES



Note 1: V_{CC} must be ≥4.5V for proper operation of WRAL.

FIGURE 2-11: WRAL TIMING FOR 93C DEVICES

3.0 PIN DESCRIPTIONS

TABLE 3-1: PIN DESCRIPTIONS

Name	PDIP	SOIC	TSSOP	MSOP	DFN(1)	TDFN(1)	SOT-23	Rotated SOIC	Function
CS	1	1	1	1	1	1	5	3	Chip Select
CLK	2	2	2	2	2	2	4	4	Serial Clock
DI	3	3	3	3	3	3	3	5	Data In
DO	4	4	4	4	4	4	1	6	Data Out
VSS	5	5	5	5	5	5	2	7	Ground
ORG/NC	6	6	6	6	6	6	—	8	Organization / 93XX66C No Internal Connection / 93XX66A/B
NC	7	7	7	7	7	7	—	1	No Internal Connection
VCC	8	8	8	8	8	8	6	2	Power Supply

Note 1: The exposed pad on the DFN/TDFN package may be connected to VSS or left floating.

3.1 Chip Select (CS)

A high level selects the device; a low level deselects the device and forces it into Standby mode. However, a programming cycle which is already in progress will be completed, regardless of the Chip Select (CS) input signal. If CS is brought low during a program cycle, the device will go into Standby mode as soon as the programming cycle is completed.

CS must be low for 250 ns minimum (TCSL) between consecutive instructions. If CS is low, the internal control logic is held in a Reset status.

3.2 Serial Clock (CLK)

The Serial Clock is used to synchronize the communication between a host device and the 93XX series device. Opcodes, address and data bits are clocked in on the positive edge of CLK. Data bits are also clocked out on the positive edge of CLK.

CLK can be stopped anywhere in the transmission sequence (at high or low level) and can be continued anytime with respect to Clock High Time (TCKH) and Clock Low Time (TCKL). This gives the controlling host freedom in preparing opcode, address and data.

CLK is a “don’t care” if CS is low (device deselected). If CS is high, but the Start condition has not been detected (DI = 0), any number of clock cycles can be received by the device without changing its status (i.e., waiting for a Start condition).

CLK cycles are not required during the self-timed write (i.e., auto erase/write) cycle.

After detection of a Start condition the specified number of clock cycles (respectively low-to-high transitions of CLK) must be provided. These clock cycles are required to clock in all required opcode, address and data bits before an instruction is executed. CLK and DI then become “don’t care” inputs waiting for a new Start condition to be detected.

3.3 Data In (DI)

Data In (DI) is used to clock in a Start bit, opcode, address and data synchronously with the CLK input.

3.4 Data Out (DO)

Data Out (DO) is used in the Read mode to output data synchronously with the CLK input (TPD after the positive edge of CLK).

This pin also provides Ready/$\overline{\text{Busy}}$ status information during erase and write cycles. Ready/$\overline{\text{Busy}}$ status information is available on the DO pin if CS is brought high after being low for minimum Chip Select Low Time (TCSL) and an erase or write operation has been initiated.

The Status signal is not available on DO, if CS is held low during the entire erase or write cycle. In this case, DO is in the High-Z mode. If status is checked after the erase/write cycle, the data line will be high to indicate the device is ready.

Note:	After a programming cycle is complete, issuing a Start bit and then taking CS low will clear the Ready/Busy status from DO.

© 2003-2022 Microchip Technology Inc. and its subsidiaries

Downloaded from Arrow.com.

3.5 Organization (ORG)

When the ORG pin is connected to VCC or Logic HI, the (x16) memory organization is selected. When the ORG pin is tied to VSS or Logic LO, the (x8) memory organization is selected. For proper operation, ORG must be tied to a valid logic level.

93XX66A devices are always (x8) organization and 93XX66B devices are always (x16) organization.

Legend:	XX...X	Part number or part number code
	T	Temperature (I, E)
	Y	Year code (last digit of calendar year)
	YY	Year code (last 2 digits of calendar year)
	WW	Week code (week of January 1 is week ‘01’)
	NNN	Alphanumeric traceability code (2 characters for small packages)
	(e3)	RoHS Compliant JEDEC® designator for Matte Tin (Sn)

Note: For very small packages with no room for the RoHS Compliant JEDEC® designator (e3), the marking will only appear on the outer carton or reel label.

Note: In the event the full Microchip part number cannot be marked on one line, it will be carried over to the next line, thus limiting the number of available characters for customer-specific information.

APPENDIX A: REVISION HISTORY

Revision F (06/2022)

Added Automotive Product ID; Changed Automotive (E) to Extended (E); Updated “master” and “slave” terminology with “host” and “client” respectively; Updated DFN, MSOP, PDIP, SOIC, SOT-23, TDFN and TSSOP package drawings.

Revision E (12/2011)

Added TDFN package.

Revision D (05/2008)

Revised Figures 2-1 through 2-4 and Figures 2-8 through 2-11; Revised Package Marking Information; Replaced Package Drawings; Revised Product ID section.

Revision C (04/2005)

Added DFN package.

Revision B (12/2003)

Corrections to Section 1.0, Electrical Characteristics. Section 4.1, 6-Lead SOT-23 package to OT.

Revision A (05/2003)

Original Release.

© 2003-2022 Microchip Technology Inc. and its subsidiaries

Downloaded from Arrow.com.

THE MICROCHIP WEBSITE

Microchip provides online support via our website at www.microchip.com. This website is used as a means to make files and information easily available to customers. Accessible by using your favorite Internet browser, the website contains the following information:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user's guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQ), technical support requests, online discussion groups, Microchip consultant program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

CUSTOMER CHANGE NOTIFICATION SERVICE

Microchip's customer notification service helps keep customers current on Microchip products. Subscribers will receive e-mail notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, access the Microchip website at www.microchip.com. Under "Support", click on "Customer Change Notification" and follow the registration instructions.

CUSTOMER SUPPORT

Users of Microchip products can receive assistance through several channels:

- Distributor or Representative
- Local Sales Office
- Field Application Engineer (FAE)
- Technical Support

Customers should contact their distributor, representative or Field Application Engineer (FAE) for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in the back of this document.

Technical support is available through the website at: http://microchip.com/support

Downloaded from Arrow.com.

PRODUCT IDENTIFICATION SYSTEM (NON-AUTOMOTIVE)

To order or obtain information, e.g., on pricing or delivery, refer to the factory or the listed sales office.

PART NO.	X	X(1)	-X	/XX

	ST	=	Plastic Thin Shrink Small Outline - 4.4 mm, 8-lead (TSSOP)

Examples:

a) 93AA66C-I/P: 4-Kbit, 512x8 or 256x16, 1.8V Serial EEPROM, Industrial Temperature, PDIP package

b) 93AA66B-I/MS: 4-Kbit, 256x16, 1.8V Serial EEPROM, Industrial Temperature, MSOP package

c) 93AA66AT-I/OT: 4-Kbit, 512x8, 1.8V Serial EEPROM, Industrial Temperature, Tape and Reel, SOT-23 package

d) 93AA66CT-I/SN: 4-Kbit, 512x8 or 256x16, 1.8V Serial EEPROM, Industrial Temperature, Tape and Reel, SOIC package

a) 93LC66A-I/MS: 4-Kbit, 512x8 2.5V Serial EEPROM, Industrial Temperature, MSOP package

b) 93LC66BT-I/OT: 4-Kbit, 256x16 2.5V Serial EEPROM, Industrial Temperature, Tape and Reel, SOT-23 package

c) 93LC66B-I/ST: 4-Kbit, 256x16 2.5V Serial EEPROM, Industrial Temperature, TSSOP package

d) 93LC66CT-E/MNY: 4-Kbit, 512x8 or 256x16 2.5V Serial EEPROM, Extended Temperature, Tape and Reel, TDFN package

a) 93C66B-I/MS: 4-Kbit, 256x16 5.0V Serial EEPROM, Industrial Temperature, MSOP package

b) 93C66C-I/SN: 4-Kbit, 512x8 or 256x16 5.0V Serial EEPROM, Industrial Temperature, SOIC package

c) 93C66AT-E/OT: 4-Kbit, 512x8 5.0V Serial EEPROM, Extended Temperature, Tape and Reel, SOT-23 package

d) 93C66BX-I/SN: 4-Kbit, 256x16 5.0V Serial EEPROM, Industrial Temperature, X-rotated SOIC package

Note 1: Tape and Reel identifier only appears in the catalog part number description. This identifier is used for ordering purposes and is not printed on the device package. Check with your Microchip Sales Office for package availability with the Tape and Reel option.

2: “Y” indicates a Nickel Palladium Gold (NiPdAu) finish.

PRODUCT IDENTIFICATION SYSTEM (AUTOMOTIVE)

To order or obtain information, e.g., on pricing or delivery, refer to the factory or the listed sales office.

PART NO.	X	X[1]	-X	/XX	XXX [2, 3]
Device	Pinout	Tape and Reel	Temperature Range	Package	Variant

Device:	93AA66A = 4-Kbit 1.8V Microwire Serial EEPROM 93AA66B = 4-Kbit 1.8V Microwire Serial EEPROM 93AA66C = 4-Kbit 1.8V Microwire Serial EEPROM w/ORG 93LC66A = 4-Kbit 2.5V Microwire Serial EEPROM 93LC66B = 4-Kbit 2.5V Microwire Serial EEPROM 93LC66C = 4-Kbit 2.5V Microwire Serial EEPROM w/ORG 93C66A =4-Kbit 5.0V Microwire Serial EEPROM 93C66B =4-Kbit 5.0V Microwire Serial EEPROM 93C66C =4-Kbit 5.0V Microwire Serial EEPROM w/ORG		
Pinout:	Blank	=	Standard pinout
Tape and Reel[1]:	Blank T	= =	Standard packaging Tape and Reel[1]
Temperature Range:	I E	= =	-40°C to +85°C (AEC-Q100 Grade 3) -40°C to +125°C (AEC-Q100 Grade 1)
Package:	MS SN OT ST	= = = =	Plastic Micro Small Outline - 8-lead (MSOP) Plastic Small Outline - Narrow, 3.90 mm, 8-lead (SOIC) Plastic Small Outline Transistor - 6-lead (SOT-23) (Tape and Reel only) Plastic Thin Shrink Small Outline - 4.4 mm, 8-lead (TSSOP)
Variant[2, 3]:	15KVAO = Standard Automotive, 15K Process 15KVXX = Customer-Specific Automotive, 15K Process		

Examples:

a) 93LC66A-I/SN15KVAO: 4-Kbit, 512x8, 2.5V Serial EEPROM, Automotive Grade 3, SOIC package

b) 93LC66BT-I/SN15KVAO: 4-Kbit, 256x16, 2.5V Serial EEPROM, Automotive Grade 3, Tape and Reel, SOIC package

c) 93LC66BT-I/OT15KVAO: 4-Kbit, 256x16, 2.5V Serial EEPROM, Automotive Grade 3, Tape and Reel, SOIC package

d) 93LC66AT-I/SN15KVAO: 4-Kbit, 512x8, 2.5V Serial EEPROM, Automotive Grade 3, Tape and Reel, SOIC Package

e) 93LC66C-E/SN15KVAO: 4-Kbit, 512x8 or 256x16, 2.5V Serial EEPROM, Automotive Grade 1, SOIC package

f) 93LC66CT-E/SN15KVAO: 4-Kbit, 512x8 or 256x16, 2.5V Serial EEPROM, Automotive Grade 1, Tape and Reel, SOIC package

g) 93LC66BT-E/ST15KVAO: 4-Kbit, 256x16, 2.5V Serial EEPROM, Automotive Grade 1, Tape and Reel, TSSOP package

a) 93C66AT-E/OT15KVAO: 4-Kbit, 512x8, 5.0V Serial EEPROM, Automotive Grade 1, Tape and Reel, SOT-23 package

Note 1: Tape and Reel identifier only appears in the catalog part number description. This identifier is used for ordering purposes and is not printed on the device package. Check with your Microchip Sales Office for package availability with the Tape and Reel option.

2: The VAO/VXX automotive variants have been designed, manufactured, tested and qualified in accordance with AEC-Q100 requirements for automotive applications.

3: For customers requesting a PPAP, a customer- specific part number will be generated and provided. A PPAP is not provided for VAO part numbers.

Note the following details of the code protection feature on Microchip products:

- Microchip products meet the specifications contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is secure when used in the intended manner, within operating specifications, and under normal conditions.
- Microchip values and aggressively protects its intellectual property rights. Attempts to breach the code protection features of Microchip product is strictly prohibited and may violate the Digital Millennium Copyright Act.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of its code. Code protection does not mean that we are guaranteeing the product is "unbreakable" Code protection is constantly evolving. Microchip is committed to continuously improving the code protection features of our products.

This publication and the information herein may be used only with Microchip products, including to design, test, and integrate Microchip products with your application. Use of this information in any other manner violates these terms. Information regarding device applications is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. Contact your local Microchip sales office for additional support or, obtain additional support at https://www.microchip.com/en-us/support/design-help/client-support-services.

THIS INFORMATION IS PROVIDED BY MICROCHIP "AS IS". MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION INCLUDING BUT NOT LIMITED TO ANY IMPLIED WARRANTIES OF NON-INFRINGEMENT, MERCHANTABILITY, AND FITNESS FOR A PARTICULAR PURPOSE, OR WARRANTIES RELATED TO ITS CONDITION, QUALITY, OR PERFORMANCE.

IN NO EVENT WILL MICROCHIP BE LIABLE FOR ANY INDIRECT, SPECIAL, PUNITIVE, INCIDENTAL, OR CONSEQUENTIAL LOSS, DAMAGE, COST, OR EXPENSE OF ANY KIND WHATSOEVER RELATED TO THE INFORMATION OR ITS USE, HOWEVER CAUSED, EVEN IF MICROCHIP HAS BEEN ADVISED OF THE POSSIBILITY OR THE DAMAGES ARE FORESEEABLE. TO THE FULLEST EXTENT ALLOWED BY LAW, MICROCHIP'S TOTAL LIABILITY ON ALL CLAIMS IN ANY WAY RELATED TO THE INFORMATION OR ITS USE WILL NOT EXCEED THE AMOUNT OF FEES, IF ANY, THAT YOU HAVE PAID DIRECTLY TO MICROCHIP FOR THE INFORMATION.

Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights unless otherwise stated.
