Share

The PoE Programmer Adapter is used for application development and only connects the PICkit3/ICD3/Real ICE 3 when it is electrically safe. By mounting the PIC18 PoE Main Board to the programmer, new code can easily be loaded to the PIC18 PoE Main Board without risk of damaging the application. This also allows the PIC18 PoE Main Board to run on a non-PoE network.

Go to www.microchip.com/EoE for the most current user's guide and collateral.

Features	Package Contents

- PoE Isolated Programming Adapter for PICkit3 / ICD3 / Real ICE 3
- Easily Loads New Code to PoE Main Board without risk of damaging application
